

G10 – G80 PowerSource Mobile Generators

The Power of Evolution.

PowerSource mobile generators from Ingersoll-Rand are a perfect example of the power of evolution. Drawing on our heritage of dependable, long-lasting mobile generators, we've designed the PowerSource line with a number of new features that give you a performance advantage.

PowerSource generators are compact and maneuverable, giving you increased flexibility on tight jobsites. But just because they're smaller doesn't mean they're light on performance. These generators feature AREP excitation technology for best-in-class motor starting capability, making them ideal for even the toughest applications. What's more, they can run up to 24 hours without refueling, and the 110 percent environmental containment system provides protection against fluid spillage.

KEY FEATURES

- An Ingersoll-Rand exclusive, the SaferSwitch protection system prevents switching of the voltage selector during operation, protecting the generator from costly damage and downtime
- Analog control system is easy to operate and provides system monitoring and fault diagnostics at a glance
- Control panel-mounted voltage selector switch allows simple adjustment of voltage range to suit many applications
- Heavy-duty druggable skid baseframe, easy adaptability to our highway-towable running gear system
- Heavy-duty enclosure is designed for low noise levels during operation and is protected with a high-gloss powder paint finish to ensure long life and corrosion resistance, even in harsh environments
- Spacious terminal board allows fast and easy connection of heavy-gauge cables with either bare-end or lugged configurations
- Torsion axles offer excellent mobility over rough terrain while providing excellent stability for safe on-road towing
- Wide-opening side doors provide easy access to all maintenance points
