

**Table 6-11. Diagnostic Trouble Code Chart**

<b>Help Message</b>	<b>DTC</b>	<b>Fault Condition/Trigger (For configurable items, fault applies only if configured. All listed conditions to be met unless stated otherwise)</b>	<b>Required Control Response or State Assignment</b>	<b>Conditions Required for Movement and/or to Clear Fault</b>	<b>400S</b>	<b>450AJ</b>
BOOM ANGLE SENSOR - OUT OF RANGE HIGH	2344	The UGM detects that Boom Angle Sensor #1 or Boom Angle Sensor #2 signal voltage > 4.5V.	The UGM shall assume the Boom is Above Elevation; The UGM shall report a faulted boom angle of 90 degrees	Power Cycled	X	X
BOOM ANGLE SENSOR - OUT OF RANGE LOW	2345	The UGM detects that Boom Angle Sensor #1 or Boom Angle Sensor #2 signal voltage < 0.5V.	The UGM shall assume the Boom is Above Elevation; The UGM shall report a faulted boom angle of 90 degrees	Power Cycled	X	X
BOOM ANGLE SENSOR – NOT RESPONDING	2346	The UGM detects the following conditions: The UGM detects < 1 deg change of Boom Angle Main Lift Up or Main Lift Down output value ≥ Creep output value Main Lift Up or Main Lift Down has been active longer than 5 seconds.	The UGM shall assume the Boom is Above Elevation; The UGM shall report a faulted boom angle of 90 degrees	Power Cycled	X	X
FUNCTION PROBLEM - JIB LIFT UP PERMANENTLY SELECTED	2370	Machine is in Ground Mode; MACHINE SETUP > JIB = YES; The Jib Lift Up switch input = High at Startup	The UGM shall prohibit Jib Lift Up and Down	The Jib Lift Up switch input = Low; Jib Lift Up and Down permitted after controls are initialized	X	X
FUNCTION PROBLEM - JIB LIFT DOWN PERMANENTLY SELECTED	2371	Machine is in Ground Mode; MACHINE SETUP > JIB = YES; The Jib Lift Down switch input = High at Startup	The UGM shall prohibit Jib Lift Up and Down	The Jib Lift Down switch input = Low; Jib Lift Up and Down permitted after controls are initialized	X	X
FUNCTION PROBLEM - SWING LEFT PERMANENTLY SELECTED	2372	Machine is in Ground Mode; The Swing Left switch input = High at Startup	The UGM shall prohibit Swing Left and Right	The Swing Left switch input = Low; Swing Left and Right permitted after controls are initialized	X	X
FUNCTION PROBLEM - SWING RIGHT PERMANENTLY SELECTED	2373	Machine is in Ground Mode; The Swing Right switch input = High at Startup	The UGM shall prohibit Swing Left and Right	The Swing Left switch input = Low; Swing Left and Right permitted after controls are initialized	X	X
BOOM ANGLE SENSOR DIS-AGREEMENT	2396	The UGM detects that Boom Angle Sensor #1 and Boom Angle Sensor #2 readings disagree ≥ 2.5 deg for longer than 5 seconds; Do not report if DTC 2343 is active	The UGM shall assume the Boom is Above Elevation and will report a faulted boom angle of 90 degrees	Power Cycled	X	X
FUNCTION PROBLEM – TOWER LIFT UP PERMANENTLY SELECTED	23105	Machine is in Ground Mode; The Tower Lift Up switch input = High at Startup	The UGM shall prohibit Tower Lift Up and Down	The Tower Lift Up switch input = Low; Tower Lift Up and Down permitted after controls are initialized		X
FUNCTION PROBLEM – TOWER LIFT DOWN PERMANENTLY SELECTED	23106	Machine is in Ground Mode; The Tower Lift Down switch input = High at Startup	The UGM shall prohibit Tower Lift Up and Down	The Tower Lift Down switch input = Low; Tower Lift Up and Down permitted after controls are initialized		X
FUNCTION PROBLEM - LIFT UP PERMANENTLY SELECTED	23107	Machine is in Ground Mode; The Lift Up switch input = High at Startup	The UGM shall prohibit Lift Up and Down	The Lift Up switch input = Low; Lift Up and Down permitted after controls are initialized	X	X
FUNCTION PROBLEM - LIFT DOWN PERMANENTLY SELECTED	23108	Machine is in Ground Mode; The Lift Down switch input = High at Startup	The UGM shall prohibit Lift Up and Down	The Lift Down switch input = Low; Lift Up and Down permitted after controls are initialized	X	X
FUNCTION PROBLEM - TELESCOPE IN PERMANENTLY SELECTED	23109	Machine is in Ground Mode; The Telescope In switch input = High at Startup	The UGM shall prohibit Telescope In and Out	The Telescope In switch input = Low; Telescope In and Out permitted after controls are initialized	X	X

Table 6-11. Diagnostic Trouble Code Chart

Help Message	DTC	Fault Condition/Trigger (For configurable items, fault applies only if configured. All listed conditions to be met unless stated otherwise)	Required Control Response or State Assignment	Conditions Required for Movement and/or to Clear Fault	400S	450AJ
FUNCTION PROBLEM - TELESCOPE OUT PERMANENTLY SELECTED	23110	Machine is in Ground Mode; The Telescope Out switch input = High at Startup	The UGM shall prohibit Telescope In and Out	The Telescope Out switch input = Low; Telescope In and Out permitted after controls are initialized	X	X
FUNCTION PROBLEM - PLATFORM LEVEL UP PERMANENTLY SELECTED	23111	Machine is in Ground Mode; The Platform Level Up switch input = High at Startup	The UGM shall prohibit Platform Level Up and Down	The Platform Level Up switch input = Low; Platform Level Up and Down permitted after controls are initialized	X	X
FUNCTION PROBLEM - PLATFORM LEVEL DOWN PERMANENTLY SELECTED	23112	Machine is in Ground Mode; The Platform Level Down switch input = High at Startup	The UGM shall prohibit Platform Level Up and Down	The Platform Level Down switch input = Low; Platform Level Up and Down permitted after controls are initialized	X	X
FUNCTION PROBLEM - PLATFORM ROTATE LEFT PERMANENTLY SELECTED	23113	Machine is in Ground Mode; The Platform Rotate Left switch input = High at Startup	The UGM shall prohibit Platform Rotate Left and Right	The Platform Rotate Left switch input = Low; Platform Rotate Left and Right permitted after controls are initialized	X	X
FUNCTION PROBLEM - PLATFORM ROTATE RIGHT PERMANENTLY SELECTED	23114	Machine is in Ground Mode; The Platform Rotate Right switch input = High at Startup	The UGM shall prohibit Platform Rotate Left and Right	The Platform Rotate Right switch input = Low; Platform Rotate Left and Right permitted after controls are initialized	X	X
TELESCOPE RETRACT SWITCHES - DISAGREEMENT	23154	The UGM detects the following conditions: Telescope Retracted Switch #1 and Telescope Retracted Switch #2 readings disagree for longer than 5 seconds; Telescope In or Telescope Out output value $\geq$ Creep output value	The UGM shall assume the Boom is Not Retracted	Power Cycled	X	
SWING SWITCHES - DISAGREEMENT	23155	The UGM detects the following conditions: Swing Switch #1 and Swing Switch #2 readings disagree for longer than 5 seconds; Swing Left or Swing Right value $\geq$ Creep output value	The UGM shall assume the Boom is Swung	Power Cycled		X
FUNCTION PROBLEM - MSSO PERMANENTLY SELECTED	23163	The MSSO switch input = Low at Startup	No response required for this DTC	Power Cycled	X	X
BOOM ANGLE SENSOR - SINGLE POINT CALIBRATION PERFORMED	23170	Single point Boom Angle calibration is successfully completed	No response required for this DTC	Fault shall be retentive through Power Cycled; Can be reset if CALIBRATIONS > BOOM ANGLE is successfully completed	X	X
CAPACITY LENGTH SWITCHES - DISAGREEMENT	23173	Dual Capacity is configured; The UGM detects the following conditions: Capacity Length Switch #1 and Capacity Length Switch #2 readings disagree for longer than 5 seconds; Telescope In or Telescope Out output value $\geq$ Creep output value	The UGM shall assume Dual Capacity = 600#	Power Cycled	X	

## SECTION 6 - JLG CONTROL SYSTEM

---

**Table 6-11. Diagnostic Trouble Code Chart**

Help Message	DTC	Fault Condition/Trigger (For configurable items, fault applies only if configured. All listed conditions to be met unless stated otherwise)	Required Control Response or State Assignment	Conditions Required for Movement and/or to Clear Fault	400S	450AJ
AMBIENT TEMPERATURE SENSOR – OUT OF RANGE LOW	241	MACHINE SETUP > TEMP CUTOUT = YES; Ambient Temperature sensor reading $\leq$ -50C	The UGM shall set Low Temperature Cutout state = Faulty  If the Machine is in Platform Mode and if the Boom is Above Elevation; The UGM shall suspend motion; The UGM shall limit the machine to Creep speed after controls initialized  If the Machine is in Platform Mode and if the Boom is not Above Elevation; The UGM shall limit Swing, Tower Lift (340AJ, 450AJ), Tele, Lift, Platform Rotate, Platform Level, and Jib Lift (if MACHINE SETUP > JIB = YES) to Creep speed  If the Machine is in Ground Mode; No response required for this DTC	Ambient Temperature sensor reading $>$ -50C; Full Speed permitted after controls are initialized	X	X

Table 6-11. Diagnostic Trouble Code Chart

Help Message	DTC	Fault Condition/Trigger (For configurable items, fault applies only if configured. All listed conditions to be met unless stated otherwise)	Required Control Response or State Assignment	Conditions Required for Movement and/or to Clear Fault	400S	450AJ
AMBIENT TEMPERATURE SENSOR – OUT OF RANGE HIGH	242	MACHINE SETUP > TEMP CUTOUT = YES; Ambient Temperature sensor reading $\geq 85^{\circ}\text{C}$	The UGM shall set Low Temperature Cutout state = Faulty  If the Machine is in Platform Mode and if the Boom is Above Elevation; The UGM shall suspend motion; The UGM shall limit the machine to Creep speed after controls initialized  If the Machine is in Platform Mode and if the Boom is not Above Elevation; The UGM shall limit Swing, Tower Lift (340AJ, 450AJ), Tele, Lift, Platform Rotate, Platform Level, and Jib Lift (if MACHINE SETUP > JIB = YES) to Creep speed  If the Machine is in Ground Mode; No response required for this DTC	Ambient Temperature sensor reading $< 85^{\circ}\text{C}$ ; Full Speed permitted after controls are initialized	X	X
MODEL CHANGED – HYDRAULICS SUSPENDED – CYCLE EMS	259	The MACHINE SETUP > MODEL NUMBER is changed using the analyzer	Disable all machine and engine functions (i.e., command engine shutdown and do not permit start)	Power Cycled	X	X
GENERATOR MOTION CUTOUT ACTIVE	2513	MACHINE SETUP > GEN SET = BELT DRIVE; MACHINE SETUP > GEN SET CUTOUT = MOTION CUTOUT; The platform Generator Switch is engaged Footswitch State = Depressed The machine is in Platform mode	The UGM shall not Enable the Machine	Not all of the trigger conditions are met	X	X
BOOM PREVENTED – DRIVE SELECTED	2514	MACHINE SETUP > FUNCTION CUTOUT = BOOM CUTOUT; Drive or Steer is already engaged; The boom is Above Elevation The operator is attempting to activate one of the boom functions DTC 2514 supercedes DTC 2518 if drive/steer and boom functions are both active when machine transitions from Below Elevation to Above Elevation.	The UGM shall prohibit all boom functions	Not all of the trigger conditions are met	X	X

Table 6-11. Diagnostic Trouble Code Chart

Help Message	DTC	Fault Condition/Trigger (For configurable items, fault applies only if configured. All listed conditions to be met unless stated otherwise)	Required Control Response or State Assignment	Conditions Required for Movement and/or to Clear Fault	400S	450AJ
DRIVE PREVENTED – ABOVE ELEVATION	2516	MACHINE SETUP > FUNCTION CUTOUT = DRIVE CUTOUT The boom is Above Elevation The operator is attempting to activate Drive or Steer	The UGM shall prohibit Drive and Steer	Not all of the trigger conditions are met	X	X
DRIVE PREVENTED – TILTED & ABOVE ELEVATION	2517	MACHINE SETUP > FUNCTION CUTOUT = DRIVE CUT E&T The boom is Above Elevation The chassis is considered Tilted The operator is attempting to activate Drive or Steer	The UGM shall prohibit Drive and Steer	Not all of the trigger conditions are met	X	X
DRIVE PREVENTED – BOOM SELECTED	2518	MACHINE SETUP > FUNCTION CUTOUT = BOOM CUT-OUT The boom is Above Elevation Any boom function is already active The operator attempts to activate Drive or Steer	The UGM shall prohibit Drive and Steer	Not all of the trigger conditions are met	X	X
DRIVE & BOOM PREVENTED - SOFT TOUCH ACTIVE	2549	MACHINE SETUP > SOFT TOUCH = YES; Machine is in Platform Mode; Soft Touch State = Enabled	Response detailed in Soft Touch section	Not all of the trigger conditions are met	X	X
SKYGUARD SWITCH – DIS-AGREEMENT	2563	MACHINE SETUP > SKYGUARD = YES; Machine is in Platform Mode; [(SkyGuard input #1 Platform Module J7-18) ≠ (Sky-Guard input #2 Platform Module J1-23)] > 160ms	Response detailed in Sky-Guard section	[{SkyGuard inputs (Platform Module J7-18 = High) and (Platform Module J1-23 = High)} and {Footswitch State = Not Depressed}]	X	X
TEMPERATURE CUTOUT ACTIVE – AMBIENT TEMPERATURE TOO LOW	2568	Low Temperature Cutout = Active	If the Boom is Above Elevation; The UGM shall suspend motion; The UGM shall limit the machine to Creep speed after controls initialized  If the Machine is in Platform Mode and if the Boom is not Above Elevation; The UGM shall limit Swing, Tower Lift (340AJ, 450AJ), Tele, Lift, Platform Rotate, Platform Level, and Jib Lift (if MACHINE SETUP > JIB = YES) to Creep speed	Low Temperature Cutout = Inactive; Full Speed permitted after controls are initialized	X	X
PLATFORM LEVEL PREVENTED – ABOVE ELEVATION	2576	Platform Level Override Cutout = Enabled; The Platform Level Up or Down switch input = High; Footswitch is active	The UGM shall suspend Platform Level Up and Down commands; The UGM shall prohibit Platform Level Up and Down	Controls initialized	X	X
RUNNING AT CREEP - PLATFORM LEVELED UNDER	2587	The control system has determined that the platform is leveled under and is being considered to be in a loading/unloading position. Boom, Tower, and Level Override functions will operate at creep speed.				

Table 6-11. Diagnostic Trouble Code Chart

Help Message	DTC	Fault Condition/Trigger (For configurable items, fault applies only if configured. All listed conditions to be met unless stated otherwise)	Required Control Response or State Assignment	Conditions Required for Movement and/or to Clear Fault	400S	450AJ
BRAKE – SHORT TO BATTERY	331	The UGM detects a short to battery at this output	The UGM shall prohibit Drive and Brake outputs.	Power Cycled	X	X
BRAKE – OPEN CIRCUIT	332	The UGM detects an open circuit at this output	No response required for this DTC	Power Cycled	X	X
LIFT UP VALVE – OPEN CIRCUIT	334	The UGM detects an open circuit at this output	The UGM shall suspend Lift Up and Down command and revert to Open Loop Current control for Lift; The UGM shall limit Lift Up and Down to Creep speed after controls initialized	The UGM no longer detects open circuit; Full speed Lift Up and Down permitted after controls are initialized	X	X
LIFT DOWN VALVE – OPEN CIRCUIT	336	The UGM detects an open circuit at this output	The UGM shall suspend Lift Up and Down command and revert to Open Loop Current control for Lift; The UGM shall prohibit Lift Up; The UGM shall limit Lift Down to Creep speed after controls initialized	The UGM no longer detects open circuit; Full speed Lift Up and Lift Down permitted after controls are initialized	X	X
GROUND ALARM – SHORT TO BATTERY	3311	The UGM detects a short to battery at this output	No response required for this DTC	Power Cycled	X	X
MAIN DUMPVALVE – SHORT TO GROUND	3358	The UGM detects a short to ground at this output	The UGM shall prohibit Main Dump	Power Cycled	X	X
MAIN DUMP VALVE – OPEN CIRCUIT	3359	The UGM detects an open circuit at this output	The UGM shall suspend Swing (340AJ, 400S, 450AJ), Tower Lift Up (340AJ, 450AJ), Lift Up, Telescope (400S, 450AJ, 18RS, 24RS), Jib Lift (400S, 450AJ); Platform Rotate (400S, 450AJ) and Platform Level (400S, 450AJ); The UGM shall limit Tower Lift Up (340AJ, 450AJ), Telescope (400S, 450AJ, 18RS, 24RS), Lift Up, Platform Rotate (400S, 450AJ), Platform Level (400S, 450AJ), and Jib Lift (400S, 450AJ) to Creep speed after controls initialized	The UGM no longer detects open circuit; Full speed Swing (340AJ, 400S, 450AJ), Tower Lift Up (340AJ, 450AJ), Lift Up, Telescope (400S, 450AJ, 18RS, 24RS), Jib Lift (400S, 450AJ), Platform Rotate (400S, 450AJ) and Platform Level (400S, 450AJ) permitted after controls are initialized	X	X

Table 6-11. Diagnostic Trouble Code Chart

Help Message	DTC	Fault Condition/Trigger (For configurable items, fault applies only if configured. All listed conditions to be met unless stated otherwise)	Required Control Response or State Assignment	Conditions Required for Movement and/or to Clear Fault	400S	450AJ
MAIN DUMP VALVE – SHORT TO BATTERY	3360	The UGM detects a short to battery at this output	The UGM shall prohibit Main Dump, Steer (400S, 450AJ), Swing (340AJ, 400S, 450AJ), TowerLift Up (340AJ, 450AJ), Lift Up, Telescope (400S, 450AJ, 18RS, 24RS), Jib Lift (400S, 450AJ), Platform Level (400S, 450AJ) and Platform Rotate (400S, 450AJ)	Power Cycled	X	X
BRAKE – SHORT TO GROUND	3361	The UGM detects a short to ground at this output	Disable UGM Drive/Steer and Brake outputs	Power Cycled	X	X
START SOLENOID – SHORT TO GROUND	3362	UGM detects a short to ground at this output	Engine Start attempt shall not be permitted.	Power Cycled	X	X
START SOLENOID – OPEN CIRCUIT	3363	UGM detects an open circuit at this output; if MACHINE SETUP > ENGINE = DUAL FUEL ECU, only evaluate until first Start is attempted for each power cycle due to possibility of ECU opening ground solenoid return path to disable Start and causing erroneous diagnostics.	No response required for this DTC	Power Cycled	X	X
START SOLENOID – SHORT TO BATTERY	3364	UGM detects a short to battery at this output	Disable UGM Engine Start by deenergizing Fuel Actuator (Kubota) or sending Engine Shutdown command (CAN-based ECUs)	Power Cycled	X	X
STEER DUMP VALVE – SHORT TO GROUND	3365	The UGM detects a short to ground at this output	The UGM shall prohibit Steer Dump	Power Cycled		
TWO SPEED VALVE – SHORT TO GROUND	3368	The UGM detects a short to ground at this output	Disable UGM 2 Speed output. If in Max Speed drive mode, switch to Max Torque; disable Max Speed drive mode	Power Cycled	X	X
TWO SPEED VALVE – OPEN CIRCUIT	3369	The UGM detects an open circuit at this output	If in Max Speed drive mode, switch to Max Torque; disable Max Speed drive mode	Power Cycled	X	X
TWO SPEED VALVE – SHORT TO BATTERY	3370	The UGM detects a short to battery at this output	If in Max Speed drive mode, switch to Max Torque; disable Max Speed drive mode. Ramp and limit drive speed to Creep value for associated drive mode: The UGM shall disable Drive when the Boom is Above Elevation.	Power Cycled	X	X

Table 6-11. Diagnostic Trouble Code Chart

Help Message	DTC	Fault Condition/Trigger (For configurable items, fault applies only if configured. All listed conditions to be met unless stated otherwise)	Required Control Response or State Assignment	Conditions Required for Movement and/or to Clear Fault	400S	450AJ
GENSET/WELDER – SHORT TO GROUND	3373	MACHINE SETUP > GEN SET = BELT DRIVE and the UGM detects a short to ground at this output	Disable UGM Generator output. Do not Enable generator functionality or set Engine to Generator RPM.	Power Cycled	X	X
GENSET/WELDER – OPEN CIRCUIT	3374	MACHINE SETUP > GEN SET = BELT DRIVE and the UGM detect an open circuit at this output	No response required for this DTC	Power Cycled	X	X
GENSET/WELDER – SHORT TO BATTERY	3375	MACHINE SETUP > GEN SET = BELT DRIVE and the UGM detects a short to battery at this output	Disable UGM Generator output, but UGM shall consider Generator always excited (enabled) and restrict engine to Generator RPM. If MACHINE SETUP > GEN-SET CUTOUT = MOTION CUTOUT, disregard cutout and permit motion.	Power Cycled	X	X
HEAD TAIL LIGHT – SHORT TO GROUND	3376	MACHINE SETUP > H & T LIGHTS = YES and the UGM detects a short to ground at this output	Disable UGM H&T Light relay output	Power Cycled	X	X
HEAD TAIL LIGHT – OPEN CIRCUIT	3377	MACHINE SETUP > H & T LIGHTS = YES and the UGM detects an open circuit at this output	No response required for this DTC	Power Cycled	X	X
HEAD TAIL LIGHT – SHORT TO BATTERY	3378	MACHINE SETUP > H & T LIGHTS = YES and the UGM detects a short to battery at this output	Disable UGM H&T Light relay output	Power Cycled	X	X
PLATFORM LEVELUP VALVE – SHORT TO GROUND	3382	The UGM detects a short to ground at this output	The UGM shall prohibit Platform Level Up; (340AJ, 400S, 450AJ) The UGM shall limit Platform Level Down to Creep speed	Power Cycled	X	X
PLATFORM LEVELUP VALVE – OPEN CIRCUIT	3383	The UGM detects an open circuit at this output	The UGM shall suspend Platform Level Up and Down; (340AJ, 400S, 450AJ) The UGM shall limit Platform Level Up and Down to Creep speed after controls initialized; (18RS, 24RS) Platform Level Up and Down permitted after controls are initialized	The UGM no longer detects open circuit; (340AJ, 400S, 450AJ) Full speed Platform Level Up and Down permitted after controls are initialized	X	X
PLATFORM LEVELUP VALVE – SHORT TO BATTERY	3384	The UGM detects a short to battery at this output	The UGM shall prohibit Platform Level Up, Level Down, and Flow Control	Power Cycled	X	X
PLATFORM LEVLEDDOWNVALVE – SHORT TO GROUND	3388	The UGM detects a short to ground at this output	The UGM shall prohibit Platform Level Up and Down	Power Cycled	X	X

Table 6-11. Diagnostic Trouble Code Chart

Help Message	DTC	Fault Condition/Trigger (For configurable items, fault applies only if configured. All listed conditions to be met unless stated otherwise)	Required Control Response or State Assignment	Conditions Required for Movement and/or to Clear Fault	400S	450AJ
PLATFORMLEVELDOWNVALVE – OPEN CIRCUIT	3389	The UGM detects an open circuit at this output	The UGM shall suspend Platform Level Up and Down; The UGM shall prohibit Platform Level Up; (340AJ, 400S, 450AJ) The UGM shall limit Platform Level Down to Creep speed after controls initialized; (18RS, 24RS) Platform Level Down permitted after controls are initialized	The UGM no longer detects open circuit; (340AJ, 400S, 450AJ) Full speed Platform Level Up and Platform Level Down permitted after controls are initialized	X	X
PLATFORMLEVELDOWNVALVE – SHORT TO BATTERY	3390	The UGM detects a short to battery at this output	The UGM shall prohibit Platform Level Up, Level Down, and Flow Control	Power Cycled	X	X
PLATFORM ROTATE LEFT VALVE – SHORT TO GROUND	3394	The UGM detects a short to ground at this output	The UGM shall prohibit Platform Rotate Left and Right	Power Cycled	X	
PLATFORM ROTATE LEFT VALVE – OPEN CIRCUIT	3395	The UGM detects an open circuit at this output	The UGM shall suspend Platform Rotate Left and Right; (340AJ, 400S, 450AJ) The UGM shall limit Platform Rotate Left and Right to Creep speed after controls initialized; (18RS, 24RS) Platform Rotate Left and Right permitted after controls are initialized	The UGM no longer detects open circuit; (340AJ, 400S, 450AJ) Full speed Platform Rotate Left and Right permitted after controls are initialized	X	
PLATFORM ROTATE LEFT VALVE – SHORT TO BATTERY	3396	The UGM detects a short to battery at this output	The UGM shall prohibit Platform Rotate Left, Right and Flow Control Valve outputs	Power Cycled	X	
PLATFORM ROTATE RIGHT VALVE – SHORT TO GROUND	3397	The UGM detects a short to ground at this output	The UGM shall prohibit Platform Rotate Left and Right	Power Cycled	X	

Table 6-11. Diagnostic Trouble Code Chart

Help Message	DTC	Fault Condition/Trigger (For configurable items, fault applies only if configured. All listed conditions to be met unless stated otherwise)	Required Control Response or State Assignment	Conditions Required for Movement and/or to Clear Fault	400S	450AJ
PLATFORM ROTATE RIGHT VALVE – OPEN CIRCUIT	3398	The UGM detects an open circuit at this output	The UGM shall suspend Platform Rotate Left and Right; (340AJ, 400S, 450AJ) The UGM shall limit Platform Rotate Left and Right to Creep speed after controls initialized; (18RS, 24RS) Platform Rotate Left and Right permitted after controls are initialized	The UGM no longer detects open circuit; (340AJ, 400S, 450AJ) Full speed Platform Rotate Left and Right permitted after controls are initialized	X	
PLATFORM ROTATE RIGHT VALVE – SHORT TO BATTERY	3399	The UGM detects a short to battery at this output	The UGM shall prohibit Platform Rotate Left, Right and Flow Control Valve outputs	Power Cycled	X	
JIB LIFT UP VALVE – SHORT TO GROUND	33100	MACHINE SETUP > JIB = YES; The UGM detects a short to ground at this output	The UGM shall prohibit Jib Lift Up; The UGM shall limit Jib Lift Down to Creep speed	Power Cycled	X	
JIB LIFT UP VALVE – OPEN CIRCUIT	33101	MACHINE SETUP > JIB = YES; The UGM detects an open circuit at this output	The UGM shall suspend Jib Lift Up and Down; The UGM shall limit Jib Lift Up and Down to Creep speed after controls initialized	The UGM no longer detects open circuit; Full speed Jib Lift Up and Down permitted after controls are initialized	X	
JIB LIFT UP VALVE – SHORT TO BATTERY	33102	MACHINE SETUP > JIB = YES; The UGM detects a short to battery at this output	The UGM shall prohibit Jib Lift Up, Down and Flow Control	Power Cycled	X	
JIB LIFT DOWN VALVE – SHORT TO GROUND	33103	MACHINE SETUP > JIB = YES; The UGM detects a short to ground at this output	The UGM shall prohibit Jib Lift Up and Down	Power Cycled	X	
JIB LIFT DOWN VALVE – OPEN CIRCUIT	33104	MACHINE SETUP > JIB = YES; The UGM detects an open circuit at this output	The UGM shall suspend Jib Lift Up and Down; The UGM shall prohibit Jib Lift Up; The UGM shall limit Jib Lift Down to Creep speed after controls initialized	The UGM no longer detects open circuit; Jib Lift Up permitted after controls are initialized Full speed Jib Lift Down permitted after controls are initialized	X	
JIB LIFT DOWN VALVE – SHORT TO BATTERY	33105	MACHINE SETUP > JIB = YES; The UGM detects a short to battery at this output	The UGM shall prohibit Jib Lift Up, Down and Flow Control	Power Cycled	X	
TOWERLIFTUPVALVE – SHORT TO GROUND	33106	The UGM detects a short to ground at this output	The UGM shall prohibit Tower Lift Up; The UGM shall limit Tower Lift Down Creep speed	Power Cycled		X

## SECTION 6 - JLG CONTROL SYSTEM

**Table 6-11. Diagnostic Trouble Code Chart**

Help Message	DTC	Fault Condition/Trigger (For configurable items, fault applies only if configured. All listed conditions to be met unless stated otherwise)	Required Control Response or State Assignment	Conditions Required for Movement and/or to Clear Fault	400S	450AJ
TOWERLIFTUPVALVE – OPEN CIRCUIT	33107	The UGM detects an open circuit at this output	The UGM shall suspend Tower Lift Up and Down command and revert to Open Loop Current control for Tower Lift; The UGM shall limit Tower Lift Up and Down to Creep speed after controls initialized	The UGM no longer detects open circuit; Full speed Tower Lift Up and Down permitted after controls are initialized	X	
TOWERLIFTDOWNVALVE – SHORT TO GROUND	33109	The UGM detects a short to ground at this output	The UGM shall prohibit Tower Lift Up and Down	Power Cycled	X	
TOWERLIFTDOWNVALVE – OPEN CIRCUIT	33110	The UGM detects an open circuit at this output	The UGM shall suspend Tower Lift Up and Down command and revert to Open Loop Current control for Tower Lift; The UGM shall prohibit Tower Lift Up; The UGM shall limit Tower Lift Down to Creep speed after controls initialized	The UGM no longer detects open circuit; Tower Lift Up permitted after controls are initialized; Full speed Tower Lift Down permitted after controls are initialized	X	
SWINGRIGHTVALVE – SHORT TO GROUND	33118	The UGM detects a short to ground at this output	The UGM shall prohibit Swing Left and Right	Power Cycled	X	X
SWINGRIGHTVALVE – OPEN CIRCUIT	33119	The UGM detects an open circuit at this output	The UGM shall suspend Swing Left and Right command and revert to Open Loop Current control for Swing; The UGM shall limit Swing Left and Right to Creep speed after controls initialized	The UGM no longer detects open circuit; Full speed Swing Left and Right permitted after controls are initialized	X	X
TELESCOPEINVALVE – SHORT TO BATTERY	33120	The UGM detects a short to battery at this output	The UGM shall prohibit Telescope In, Out and Flow Control	Power Cycled	X	X
SWINGLEFTVALVE – SHORT TO GROUND	33122	The UGM detects a short to ground at this output	The UGM shall prohibit Swing Left and Right	Power Cycled	X	X
TELESCOPEOUTVALVE – SHORT TO BATTERY	33123	The UGM detects a short to battery at this output	The UGM shall prohibit Telescope In, Out and Flow Control	Power Cycled	X	X
LIFTVALVES – SHORT TO BATTERY	33182	The UGM detects a short to battery at either the Lift Up or Lift Down valve	The UGM shall prohibit Lift Up and Down; The UGM shall open the Lift Current Feedback low side FET	Power Cycled	X	X

Table 6-11. Diagnostic Trouble Code Chart

Help Message	DTC	Fault Condition/Trigger (For configurable items, fault applies only if configured. All listed conditions to be met unless stated otherwise)	Required Control Response or State Assignment	Conditions Required for Movement and/or to Clear Fault	400S	450AJ
TELESCOPE OUT VALVE – OPEN CIRCUIT	33186	The UGM detects an open circuit at this output	(340AJ, 400S, 450AJ) The UGM shall suspend Telescope In and Out  (18RS, 24RS) The UGM shall suspend Telescope In and Out command and revert to Open Loop Current control for Telescope  The UGM shall limit Telescope In and Out to Creep speed after controls initialized	The UGM no longer detects open circuit; Full speed Telescope In and Out permitted after controls are initialized	X	X
TELESCOPE OUT VALVE – SHORT TO GROUND	33188	The UGM detects a short to ground at this output	The UGM shall prohibit Telescope Out; Telescope In speed limited to Creep	Power Cycled	X	X
TELESCOPE IN VALVE – OPEN CIRCUIT	33189	The UGM detects an open circuit at this output	(340AJ, 400S, 450AJ) The UGM shall suspend Telescope In and Out  (18RS, 24RS) The UGM shall suspend Telescope In and Out command and revert to Open Loop Current control for Telescope  The UGM shall prohibit Telescope Out; The UGM shall limit Telescope In to Creep speed after controls initialized	The UGM no longer detects open circuit; Telescope Out permitted after controls are initialized; Full speed Telescope In permitted after controls are initialized	X	X
TELESCOPE IN VALVE – SHORT TO GROUND	33190	The UGM detects a short to ground at this output	The UGM shall prohibit Telescope In and Out	Power Cycled	X	X
APU PUMP RELAY – OPEN CIRCUIT	33276	The UGM detects an open circuit at this output	No response required for this DTC	Power Cycled	X	X
APU PUMP RELAY – SHORT TO BATTERY	33277	The UGM detects a short to battery at this output	Disable UGM APU Pump relay output	Power Cycled	X	X
APU PUMP RELAY – SHORT TO GROUND	33278	The UGM detects a short to ground at this output	Disable UGM APU Pump relay output	Power Cycled	X	X
GLOWPLUG – OPEN CIRCUIT	33279	MACHINE SETUP > ENGINE ≠ DUAL FUEL ECM MACHINE SETUP > ENGINE ≠ DEUTZ EMR4 MACHINE SETUP > GLOW PLUG ≠ NO The UGM detects an open circuit at this output	No response required for this DTC	Power Cycled	X	X
GLOWPLUG – SHORT TO BATTERY	33280	MACHINE SETUP > ENGINE ≠ DUAL FUEL ECM MACHINE SETUP > ENGINE ≠ DEUTZ EMR4 MACHINE SETUP > GLOW PLUG ≠ NO The UGM detects a short to battery at this output	Disable UGM Glow Plug relay output	Power Cycled	X	X

## SECTION 6 - JLG CONTROL SYSTEM

**Table 6-11. Diagnostic Trouble Code Chart**

Help Message	DTC	Fault Condition/Trigger (For configurable items, fault applies only if configured. All listed conditions to be met unless stated otherwise)	Required Control Response or State Assignment	Conditions Required for Movement and/or to Clear Fault	400S	450AJ
GLOWPLUG – SHORT TO GROUND	33281	MACHINE SETUP > ENGINE ≠ DUAL FUEL ECM MACHINE SETUP > ENGINE ≠ DEUTZ EMR4 MACHINE SETUP > GLOW PLUG ≠ NO The UGM detects a short to ground at this output	Disable UGM Glow Plug relay output	Power Cycled	X	X
LIFT – CURRENT FEEDBACK READING TOO LOW	33287	The Engine State = ENGINE RUNNING; The UGM commanded current > 250mA; The difference between the commanded current and the measured feedback current > [the larger of (125mA) or (15% of the commanded function Max)] for longer than 1 second	The UGM shall suspend Lift Up and Down command and revert to Open Loop Current control for Lift; The UGM shall limit Lift Up and Down to Creep speed after controls initialized	Power Cycled	X	X
SWING LEFT VALVE – OPEN CIRCUIT	33295	The UGM detects an open circuit at this output	The UGM shall suspend Swing Left and Right command and revert to Open Loop Current control for Swing; The UGM shall limit Swing Left and Right to Creep speed after controls initialized	The UGM no longer detects open circuit; Full speed Swing Left and Right permitted after controls are initialized	X	X
FLOW CONTROL VALVE – OPEN CIRCUIT	33314	The UGM detects an open circuit at this output	The UGM shall suspend Flow Control and revert to Open Current loop control for Flow Control; The UGM shall limit Telescope, Jib Lift Up, Jib Lift Down (400S, 450AJ), Platform Rotate and Platform Level to Creep speed after controls initialized	The UGM no longer detects open circuit; Full speed Telescope, Jib Lift Up, Jib Lift Down (400S, 450AJ), Platform Rotate and Platform Level permitted after controls are initialized	X	X
FLOW CONTROL VALVE – SHORT TO BATTERY	33315	The UGM detects a short to battery at this output	The UGM shall prohibit Flow Control, Telescope, Jib Lift Up (permitted if operating in Auxiliary Power/Emergency Descent mode), Jib Lift Down (permitted if operating in Auxiliary Power/Emergency Descent mode)(400S, 450AJ), Platform Rotate and Platform Level	Power Cycled	X	X
FLOW CONTROL VALVE – SHORT TO GROUND	33316	The UGM detects a short to ground at this output	The UGM shall prohibit Flow Control, Telescope, Jib Lift Up, Jib Lift Down (400S, 450AJ), Platform Rotate and Platform Level	Power Cycled	X	X

Table 6-11. Diagnostic Trouble Code Chart

Help Message	DTC	Fault Condition/Trigger (For configurable items, fault applies only if configured. All listed conditions to be met unless stated otherwise)	Required Control Response or State Assignment	Conditions Required for Movement and/or to Clear Fault	400S	450AJ
DRIVE FORWARD VALVE – OPEN CIRCUIT	33317	The UGM detects an open circuit at this output	The UGM shall suspend Drive Forward and Reverse command and revert to Open Current loop control for Drive; The UGM shall limit Drive Forward and Reverse to Creep speed after controls initialized	The UGM no longer detects open circuit; Full speed Drive Forward and Reverse permitted after controls are initialized	X	X
DRIVE VALVES – SHORT TO BATTERY	33318	The UGM detects a short to battery at either the Drive Forward or Drive Reverse valve.	The UGM shall prohibit Drive Forward and Reverse; The UGM shall open the Drive Current Feedback low side FET	Power Cycled	X	X
DRIVE FORWARD VALVE – SHORT TO GROUND	33319	The UGM detects a short to ground at this output	The UGM shall prohibit Drive Forward and Reverse	Power Cycled	X	X
DRIVE REVERSE VALVE – OPEN CIRCUIT	33320	The UGM detects an open circuit at this output	The UGM shall suspend Drive Forward and Reverse command and revert to Open Current loop control for Drive; The UGM shall limit Drive Forward and Reverse to Creep speed after controls initialized	The UGM no longer detects open circuit; Full speed Drive Forward and Reverse permitted after controls are initialized	X	X
DRIVE REVERSE VALVE – SHORT TO GROUND	33322	The UGM detects a short to ground at this output	The UGM shall prohibit Drive Forward and Reverse	Power Cycled	X	X
DRIVE – CURRENT FEEDBACK READING TOO LOW	33331	The Engine State = ENGINE RUNNING; The UGM commanded current > 250mA; The difference between the commanded current and the measured feedback current > [the larger of (125mA) or (15% of the commanded function Max)] for longer than 1 second	The UGM shall suspend Drive Forward and Reverse command and revert to Open Current loop control for Drive; The UGM shall limit Drive Forward and Reverse to Creep speed after controls initialized	Power Cycled	X	X
LIFT UP VALVE – SHORT TO GROUND	33406	The UGM detects a short to ground at this output	The UGM shall prohibit Lift Up; The UGM shall limit Lift Down Creep speed	Power Cycled	X	X
LIFT DOWN VALVE – SHORT TO GROUND	33407	The UGM detects a short to ground at this output	The UGM shall prohibit Lift Up and Down	Power Cycled	X	X

## SECTION 6 - JLG CONTROL SYSTEM

**Table 6-11. Diagnostic Trouble Code Chart**

Help Message	DTC	Fault Condition/Trigger (For configurable items, fault applies only if configured. All listed conditions to be met unless stated otherwise)	Required Control Response or State Assignment	Conditions Required for Movement and/or to Clear Fault	400S	450AJ
DRIVE – LOSS OF CURRENT FEEDBACK	33410	Measured feedback current < 225mA while PWM output > 40% for a period of 100ms.	The UGM shall suspend Drive Forward and Reverse command and revert to Open Current loop control for Drive; The UGM shall limit Drive Forward and Reverse to Creep speed after controls initialized	Power Cycled	X	X
SWING VALVES – SHORT TO BATTERY	33412	The UGM detects a short to battery at either the Swing Right or Swing Left valve	The UGM shall prohibit Swing Left and Right; The UGM shall open the Swing Current Feedback low side FET	Power Cycled	X	X
TOWER LIFT – CURRENT FEEDBACK READING TOO LOW	33413	The Engine State = ENGINE RUNNING; The UGM commanded current > 250mA; The difference between the commanded current and the measured feedback current > [the larger of (125mA) or (15% of the commanded function Max)] for longer than 1 second	The UGM shall suspend Tower Lift Up and Down command and revert to Open Loop Current control for Tower Lift; The UGM shall limit Tower Lift Up and Down to Creep speed after controls initialized	Power Cycled		X
SWING – CURRENT FEEDBACK READING TOO LOW	33414	The Engine State = ENGINE RUNNING; The UGM commanded current > 250mA; The difference between the commanded current and the measured feedback current > [the larger of (125mA) or (15% of the commanded function Max)] for longer than 1 second	The UGM shall suspend Swing Left and Right command and revert to Open Loop Current control for Swing; The UGM shall limit Swing Left and Right to Creep speed after controls initialized	Power Cycled	X	X
FLOW CONTROL VALVE – CURRENT FEEDBACK READING TOO LOW	33415	The Engine State = ENGINE RUNNING; The UGM commanded current > 250mA; The difference between the commanded current and the measured feedback current > [the larger of (125mA) or (15% of the commanded function Max)] for longer than 1 second	The UGM shall suspend Flow Control and revert to Open Current loop control for Flow Control; The UGM shall limit Telescope, Jib Lift Up; Jib Lift Down (400S, 450AJ), Platform Rotate and Platform Level to Creep speed after controls initialized	Power Cycled	X	X

Table 6-11. Diagnostic Trouble Code Chart

Help Message	DTC	Fault Condition/Trigger (For configurable items, fault applies only if configured. All listed conditions to be met unless stated otherwise)	Required Control Response or State Assignment	Conditions Required for Movement and/or to Clear Fault	400S	450AJ
TOWERLIFT–CURRENT FEEDBACK READING LOST	33416	Measured feedback current < 225mA while PWM output > 40% for a period of 100ms.	The UGM shall suspend Tower Lift Up and Down command and revert to Open Loop Current control for Tower Lift; The UGM shall limit Tower Lift Up and Down to Creep speed after controls initialized	Power Cycled		X
LIFT – CURRENT FEEDBACK READING LOST	33417	Measured feedback current < 225mA while PWM output > 40% for a period of 100ms.	The UGM shall suspend Lift Up and Down command and revert to Open Loop Current control for Lift; The UGM shall limit Lift Up and Down to Creep speed after controls initialized	Power Cycled	X	X
SWING – CURRENT FEEDBACK READING LOST	33418	Measured feedback current < 225mA while PWM output > 40% for a period of 100ms.	The UGM shall suspend Swing Left and Right command and revert to Open Loop Current control for Swing; The UGM shall limit Swing Left and Right to Creep speed after controls initialized	Power Cycled	X	X
FLOW CONTROL VALVE – CURRENT FEEDBACK READING LOST	33419	Measured feedback current < 225mA while PWM output > 40% for a period of 100ms.	The UGM shall suspend Flow Control and revert to Open Current loop control for Flow Control; The UGM shall limit Telescope In and Out, Jib Lift Up and Down (400S, 450AJ), Platform Rotate Right and Left and Platform Level Up and Down to Creep speed after controls initialized	Power Cycled	X	X
TOWERLIFTVALVES – SHORT TO BATTERY	33425	The UGM detects a short to battery at either the Tower Lift Up or Tower Lift Down valve.	The UGM shall prohibit Tower Lift Up and Down; The UGM shall open the Tower Lift Current Feedback low side FET	Power Cycled		X
AUXILIARY LIFT DOWN VALVE – SHORT TO GROUND	33537	The UGM detects a short to ground at this output	The UGM shall prohibit Aux Lift Down	Power Cycled	X	X
AUXILIARY LIFT DOWN VALVE – OPEN CIRCUIT	33538	The UGM detects an open circuit at this output	The UGM shall suspend Aux Lift Down; Aux Lift Down permitted after controls are initialized	The UGM no longer detects open circuit	X	X

## SECTION 6 - JLG CONTROL SYSTEM

**Table 6-11. Diagnostic Trouble Code Chart**

Help Message	DTC	Fault Condition/Trigger (For configurable items, fault applies only if configured. All listed conditions to be met unless stated otherwise)	Required Control Response or State Assignment	Conditions Required for Movement and/or to Clear Fault	400S	450AJ
AUXILIARY LIFT DOWN VALVE - SHORT TO BATTERY	33539	The UGM detects a short to battery at this output	The UGM shall prohibit Aux Lift Down; The UGM shall open the Auxiliary low side FET	Power Cycled	X	
AUXILIARY TOWER LIFT DOWN VALVE - SHORT TO GROUND	33540	The UGM detects a short to ground at this output	The UGM shall prohibit Aux Tower Lift Down	Power Cycled		X
AUXILIARY TOWER LIFT DOWN VALVE - OPEN CIRCUIT	33541	The UGM detects an open circuit at this output	The UGM shall suspend Aux Tower Lift Down; Aux Tower Lift Down permitted after controls are initialized	The UGM no longer detects open circuit		X
OSCILLATING AXLE #1 VALVE - SHORT TO GROUND	33543	The UGM detects a short to ground at this output	UGM shall disable Oscillating Axle #1 valve and Oscillating Axle #2 valve outputs; The UGM shall Lock the Oscillating Axle	Power Cycled	X	X
OSCILLATING AXLE #1 VALVE - OPEN CIRCUIT	33544	The UGM detects an open circuit at this output	UGM shall disable Oscillating Axle #1 valve and Oscillating Axle #2 valve outputs; The UGM shall Lock the Oscillating Axle	Power Cycled	X	X
OSCILLATING AXLE #1 VALVE - SHORT TO BATTERY	33545	The UGM detects a short to battery at this output	UGM shall disable Oscillating Axle #1 valve and Oscillating Axle #2 valve outputs; The UGM shall Lock the Oscillating Axle	Power Cycled	X	X
OSCILLATING AXLE #2 VALVE - SHORT TO GROUND	33546	The UGM detects a short to ground at this output	UGM shall disable Oscillating Axle #1 valve and Oscillating Axle #2 valve outputs; The UGM shall Lock the Oscillating Axle	Power Cycled	X	X
OSCILLATING AXLE #2 VALVE - OPEN CIRCUIT	33547	The UGM detects an open circuit at this output	UGM shall disable Oscillating Axle #1 valve and Oscillating Axle #2 valve outputs; The UGM shall Lock the Oscillating Axle	Power Cycled	X	X
OSCILLATING AXLE #2 VALVE - SHORT TO BATTERY	33548	The UGM detects a short to battery at this output	UGM shall disable Oscillating Axle #1 valve and Oscillating Axle #2 valve outputs; The UGM shall Lock the Oscillating Axle	Power Cycled	X	X

Table 6-11. Diagnostic Trouble Code Chart

Help Message	DTC	Fault Condition/Trigger (For configurable items, fault applies only if configured. All listed conditions to be met unless stated otherwise)	Required Control Response or State Assignment	Conditions Required for Movement and/or to Clear Fault	400s	450AJ
AUXILIARY VALVES-SHORT TO BATTERY	33567	The UGM detects a short to battery at either the Aux Lift Down or Aux Tower Lift Down valve	The UGM shall prohibit Aux Lift Down and Aux Tower Lift Down; The UGM shall open the Auxiliary low side FET	Power Cycled		X
AUXILIARY-CURRENT FEEDBACK READING LOST	33568	Measured feedback current < 225mA while output is active for a period of 100ms.	The UGM shall suspend Aux Lift Down and Aux Tower Down (450AJ); Aux Lift Down and Aux Tower Down (450AJ) permitted after controls are initialized	Power Cycled	X	X
ECM PULL DOWN RESISTOR-OPEN CIRCUIT	33575	MACHINE SETUP > ENGINE = DEUTZ EMR4; Pull down resister not detected	The UGM shall send the Engine Shutdown command	Power Cycled	X	X
PLATFORM ROTATE LEFT VALVE-OPEN CIRCUIT	349	The PM detects an open circuit at this output and reports it to the UGM	The UGM shall suspend commands to PM for Platform Rotate Right and Left; The UGM shall limit Platform Rotate Right and Left to Creep speed after controls are initialized	The PM no longer detects open circuit; Full speed Platform Rotate Right and Left permitted after controls are initialized		X
PLATFORM ROTATE LEFT VALVE-SHORT TO BATTERY	3410	The PM detects a short to battery at this output and reports it to the UGM	The UGM shall disable commands to PM for Platform Rotate Right and Left; The UGM shall prohibit Flow Control	Power Cycled		X
PLATFORM ROTATE LEFT VALVE-SHORT TO GROUND	3411	The PM detects a short to ground at this output and reports it to the UGM	The UGM shall disable commands to PM for Platform Rotate Right and Left	Power Cycled		X
PLATFORM ROTATE RIGHT VALVE-OPEN CIRCUIT	3412	The PM detects an open circuit at this output and reports it to the UGM	The UGM shall suspend commands to PM for Platform Rotate Right and Left; The UGM shall limit Platform Rotate Right and Left to Creep speed after controls are initialized	The PM no longer detects open circuit; Full speed Platform Rotate Right and Left permitted after controls are initialized		X
PLATFORM ROTATE RIGHT VALVE-SHORT TO BATTERY	3413	The PM detects a short to battery at this output and reports it to the UGM	The UGM shall disable commands to PM for Platform Rotate Right and Left; The UGM shall prohibit Flow Control	Power Cycled		X
PLATFORM ROTATE RIGHT VALVE-SHORT TO GROUND	3414	The PM detects a short to ground at this output and reports it to the UGM	The UGM shall disable commands to PM for Platform Rotate Right and Left	Power Cycled		X

## SECTION 6 - JLG CONTROL SYSTEM

**Table 6-11. Diagnostic Trouble Code Chart**

Help Message	DTC	Fault Condition/Trigger (For configurable items, fault applies only if configured. All listed conditions to be met unless stated otherwise)	Required Control Response or State Assignment	Conditions Required for Movement and/or to Clear Fault	400S	450AJ
JIB LIFT UP VALVE – OPEN CIR-CUIT	3415	MACHINE SETUP > JIB = YES The PM detects an open circuit at this output and reports it to the UGM	The UGM shall suspend commands to PM for Jib Lift Up and Down; The UGM shall limit Jib Lift Up and Down to Creep speed	The PM no longer detects open circuit; Full speed Jib Lift Up and Down permitted after controls are initialized	X	
JIB LIFT UP VALVE – SHORT TO BATTERY	3416	MACHINE SETUP > JIB = YES The PM detects a short to battery at this output and reports it to the UGM	The UGM shall disable commands to PM for Jib Lift Up and Down; The UGM shall prohibit Flow Control	Power Cycled	X	
JIB LIFT UP VALVE – SHORT TO GROUND	3417	MACHINE SETUP > JIB = YES The PM detects a short to ground at this output and reports it to the UGM	The UGM shall disable commands to PM for Jib Lift Up; The UGM limits Jib Lift Down to Creep speed	Power Cycled	X	
JIB LIFT DOWN VALVE – OPEN CIRCUIT	3418	MACHINE SETUP > JIB = YES The PM detects an open circuit at this output and reports it to the UGM	The UGM shall suspend commands to PM for Jib Lift Up and Down; The UGM shall prohibit Jib Lift Up; The UGM shall limit Jib Lift Down to Creep speed	The PM no longer detects open circuit; Jib Lift Up permitted after controls are initialized Full speed Jib Lift Down permitted after controls are initialized	X	
JIB LIFT DOWN VALVE – SHORT TO BATTERY	3419	MACHINE SETUP > JIB = YES The PM detects a short to battery at this output and reports it to the UGM	The UGM shall disable commands to PM for Jib Lift Up and Down; (450AJ) The UGM shall prohibit Flow Control	Power Cycled	X	
JIB LIFT DOWN VALVE – SHORT TO GROUND	3420	MACHINE SETUP > JIB = YES The PM detects a short to ground at this output and reports it to the UGM; detection occurs for PWM output approximately $\leq$ 15% or for STG condition.	The UGM shall disable commands to PM for Jib Lift Up and Down	Power Cycled	X	
FUEL SENSOR - SHORT TO BATTERY OR OPEN CIRCUIT	431	UGM fuel sensor analog input J2-25 detects a voltage higher than 2.50 volts (A/D > 512)	Energize fuel sensor per System Indicators	Power Cycled	X	
FUEL SENSOR - SHORT TO GROUND	432	UGM fuel sensor analog input J2-25 detects a voltage less than or equal to 0.3 volts (A/D < 61)	Energize fuel sensor per System Indicators	Power Cycled	X	
ENGINE TROUBLE CODE	437	An engine with a CAN engine controller is configured in MACHINE SETUP The engine controller reports a J1939 fault	Report and log in Help If [(MACHINE SETUP > DEUTZEMR2) or (MACHINE SETUP > DEUTZEMR4) and SPN:FMI = 535:7], prohibit engine cranking	Power Cycled	X	X

Table 6-11. Diagnostic Trouble Code Chart

Help Message	DTC	Fault Condition/Trigger (For configurable items, fault applies only if configured. All listed conditions to be met unless stated otherwise)	Required Control Response or State Assignment	Conditions Required for Movement and/or to Clear Fault	400S	450AJ
HIGH ENGINETEMP	438	An engine with a CAN engine controller is <u>not</u> configured in MACHINE SETUP: The Engine State = ENGINE RUNNING > 10 seconds The coolant temperature is greater than or equal to the configured engines max allowed temperature. The maximum allowed temperature > 110°C. An engine with a CAN engine controller is configured in MACHINE SETUP: ECM transmits a J1939 DM1 message for an engine coolant high temperature critical fault (SPN:FMI 110:0) on CAN2 or uses the J1939 Transport Protocol every one second to send this information if multiple engine faults exist.	MACHINE SETUP > ENGINE SHUTDOWN = ENABLED then shutdown the engine Activate High Engine Temperature indicator J4-28	Power Cycled	X	X
NO ALTERNATOR OUTPUT	4310	The Engine State = ENGINE RUNNING > 10 seconds and UGM system voltage < 11.5 volts for 10 seconds	Activate the No Charge indicator J4-26 per System Indicators	UGM system voltage > 11.7 volts	X	X
LOW OIL PRESSURE	4311	An engine with a CAN engine controller is <u>not</u> configured in MACHINE SETUP The Engine State = ENGINE RUNNING > 10 seconds The engine oil pressure is LOW (debounce 3s). An engine with a CAN engine controller is configured in MACHINE SETUP ECM transmits a J1939 DM1 message for an engine oil low pressure critical fault (SPN:FMI 100:1) on CAN2 or uses the J1939 Transport Protocol every one second to send this information if multiple engine faults exist.	MACHINE SETUP > ENGINE SHUTDOWN = ENABLED then shutdown the engine Activate the Low Oil Pressure indicator J4-29	Power Cycled	X	X
ENGINE COOLANT – LOW LEVEL	4334	MACHINE SETUP > ENGINE = DEUTZ EMR4; ECM transmits a J1939 DM1 message for an engine coolant low level fault (SPN:FMI 111:1) on CAN2 or uses the J1939 Transport Protocol every one second to send this information if multiple engine faults exist.	MACHINE SETUP > ENGINE SHUTDOWN = ENABLED then shutdown the engine; Activate High Engine Temperature indicator J4-28	Power Cycled	X	X
WATER IN FUEL	4375	The engine has shut down because an unacceptable amount of water has been detected in the fuel or there is an issue with the water in fuel sensor.  If operating in platform mode, platform alarm will sound continuously and low fuel indicator will flash.  If operating in ground mode, the ground alarm will sound		Water in fuel filter for water in fuel or water in fuel sensor.		

Table 6-11. Diagnostic Trouble Code Chart

Help Message	DTC	Fault Condition/Trigger (For configurable items, fault applies only if configured. All listed conditions to be met unless stated otherwise)	Required Control Response or State Assignment	Conditions Required for Movement and/or to Clear Fault	400S	450AJ
FUNCTIONS PREVENTED - ENGINE OIL WARM UP ACTIVE	4376	Engine Oil Warm Up is active because the engine was started when the engine coolant was less than 32 deg F. Engine Oil Warm Up will remain active until the engine coolant is greater than 32 deg F or the engine has been running for 60s and the engine coolant is less than 32 deg F.  Machine functions will be prevented until Engine Oil Warm Up is complete.				
BATTERY VOLTAGE TOO LOW – SYSTEM SHUTDOWN	441	The UGM detects that its supply voltage is less than 9 volts  Engine State ≠ ENGINE CRANKING  Auxiliary Power/Emergency Descent Mode is not active	Disable all UGM valve outputs except those used during APU/Emergency Descent [Tower Lift Down, Lift Down, Swing (400S, 450AJ, 24RS), Jib Lift Up/Down (MACHINE SETUP > JIB= YES)]. If MACHINE SETUP > H&T LIGHTS = YES or > ENGINE ≠ DUAL FUEL ECM turn off lights	Voltage is greater than 9.25 volts	X	X
BATTERY VOLTAGE TOO HIGH – SYSTEM SHUTDOWN	442	The UGM detects that its supply voltage > 16.0 volts	Disable all UGM and Platform outputs until voltage < 15.75 volts and do not permit Machine Enable	Power Cycled	X	X
LSS BATTERY VOLTAGE TOO HIGH	443	MACHINE SETUP > LOAD SYSTEM ≠ NO  The UGM detects that the LSS reports supply voltage > 16.0V	The load sensor has determined that its supply voltage is too high (> 16V).  The machine will assume the platform is overloaded.	Check for issue with sensor supply voltage.	X	X
LSS BATTERY VOLTAGE TOO LOW	444	MACHINE SETUP > LOAD SYSTEM ≠ NO  The UGM detects that the LSS reports supply voltage < 9.0V	The load sensor has determined that its supply voltage is too low (> 8V).  The machine will assume the platform is overloaded.	Check for issue with sensor supply voltage.	X	X
BATTERY VOLTAGE LOW	445	The UGM detects that its supply voltage < 11 volts for 5 seconds.  Engine State ≠ ENGINE CRANKING  Auxiliary Power/Emergency Descent Mode is not active  Glow Plugs are not energized	No response required for this DTC	Voltage is greater than 11.25 volts	X	X
LSS BATTERY VOLTAGE - INITIALIZATION ERROR	4479	The shear beam is reporting a Sensor Supply Voltage Initialization Error  The machine will assume the platform is overloaded.  This fault, once annunciated is latched within a given key cycle.	Possible sensor hardware issue.			

Table 6-11. Diagnostic Trouble Code Chart

Help Message	DTC	Fault Condition/Trigger (For configurable items, fault applies only if configured. All listed conditions to be met unless stated otherwise)	Required Control Response or State Assignment	Conditions Required for Movement and/or to Clear Fault	400S	450AJ
LSS BATTERY VOLTAGE - NOT CALIBRATED	4480	The shear beam is reporting a Sensor Supply Voltage calibration error.  The machine will assume the platform is overloaded.  This fault, once annunciated is latched within a given key cycle.	Possible sensor hardware issue.			
CANBUS FAILURE - PLATFORM MODULE	662	UGM does not receive any CAN messages from the PM in 250ms	The UGM shall suspend motion;  If MACHINESETUP > GENERATOR, the UGM shall disable to turn off generator relay output and assume generator off state.  If MACHINESETUP > ENGINE = DUAL FUEL and > H & T LIGHTS = YES, state of switch prior to loss of CAN Bus 1 shall be retained until CAN Bus 1 is restored or power cycled.  Reactivation of Footswitch is required after CAN Bus 1 is restored to obtain Machine Enable.  (340AJ, 450AJ) If the Machine is in Ground Mode, the UGM shall disable commands to PM for Jib Lift Up and Down, Platform Rotate Right and Left;	CAN messages are received from the PM	X	X
CANBUS FAILURE - LOAD SENSING SYSTEM MODULE	663	MACHINE SETUP > LOADSYSTEM ≠ NO UGM does not receive any CAN messages from the LSS module in 1000ms	The control system has lost communication with the load sensing system load pin.  The machine will assume the platform is overloaded.	Check wiring to load sensor.	X	X

Table 6-11. Diagnostic Trouble Code Chart

Help Message	DTC	Fault Condition/Trigger (For configurable items, fault applies only if configured. All listed conditions to be met unless stated otherwise)	Required Control Response or State Assignment	Conditions Required for Movement and/or to Clear Fault	400S	450AJ
CANBUS FAILURE – ENGINE CONTROLLER	666	An engine with a CAN engine controller is configured in MACHINE SETUP No CAN messages are received from the engine controller for more than 250ms	UGM shall set Target engine RPM = Mid-Engine if Engine State ≠ ENGINE STOPPED, and assume Engine Controller reporting mid-Engine; otherwise, Engine State = ENGINE STOPPED. If engine state = ENGINE STOPPED at time of CAN loss, UGM shall permit one start attempt. If engine state ≠ ENGINE STOPPED at time of CAN loss, UGM shall decel all functions. If MACHINE SETUP > GENERATOR ≠ NO, Generator Relay output to be turned off until re-enabled by operator after CAN is re-established.	CAN messages are received from the engine controller; UGM shall require re-activation of Footswitch (Platform Mode) or Ground Enable (Ground Mode) to enable functions and resume operation.	X	X
CANBUS FAILURE – EXCESSIVE CANBUS ERRORS	6613	More than 22 error frames per second for 4 seconds or more than 500 Buss Off conditions since last power cycle.	No response required for this DTC	Power Cycled	X	X
CANBUS FAILURE – TCU MODULE	6622	MACHINE SETUP > CLEARSKY = YES No CAN2 messages are received from the TCU module for more than 30 seconds	No response required for this DTC	Not all of the trigger conditions are met	X	X
CANBUS FAILURE – CHASSIS TILT SENSOR	6635	UGM does not receive any CAN messages from the Chassis Tilt Sensor in 250ms	The UGM shall consider the machine Tilted; UGM reports a combined chassis tilt angle of 90 degrees; UGM shall report individual axis readings as??	CAN messages are received from the Chassis tilt Sensor and controls are initialized	X	X
CANBUS FAILURE – GROUND DISPLAY	6651	UGM does not receive any CAN messages from the Ground Display in 250ms	No response required for this DTC	CAN messages are received from the Ground Display	X	X

Table 6-11. Diagnostic Trouble Code Chart

Help Message	DTC	Fault Condition/Trigger (For configurable items, fault applies only if configured. All listed conditions to be met unless stated otherwise)	Required Control Response or State Assignment	Conditions Required for Movement and/or to Clear Fault	400S	450AJ
CANBUS FAILURE – TEMPERATURE SENSOR	6657	MACHINE SETUP > TEMP CUTOUT = YES; UGM does not receive any CAN messages from the Ambient Temperature sensor in 250ms	The UGM shall set Low Temperature Cutout state = Faulty  If the Machine is in Platform Mode and if the Boom is Above Elevation; The UGM shall suspend motion; The UGM shall limit the machine to Creep speed after controls initialized  If the Machine is in Platform Mode and if the Boom is not Above Elevation; The UGM shall limit Swing, Tower Lift (340AJ, 450AJ), Tele, Lift, Platform Rotate, Platform Level, and Jib Lift (if MACHINE SETUP > JIB = YES) to Creep speed  If the Machine is in Ground Mode; No response required for this DTC	CAN messages are received from the Ambient Temperature sensor	X	X
REMOTE CONTRACT MANAGEMENT OVERRIDE – ALL FUNCTIONS IN CREEP	681	MACHINE SETUP > CLEARSKY = YES Value set by ClearSky TCU	Response detailed in Remote Contract Management section.	Cleared by ClearSky TCU	X	X
CHASSIS TILT SENSOR NOT CALIBRATED	813	The UGM detects one of the follow conditions: The tilt sensor has not been calibrated; For 400S, 450AJ, the Tilt Sensor source Address is 0xC0; For 400S, 450AJ, the Tilt Sensor Serial number does not match	The UGM shall consider the machine Tilted UGM reports a combined chassis tilt angle of 90 degrees; UGM shall report individual axis readings	Tilt sensor calibrated	X	X
CHASSIS TILT SENSOR OUT OF RANGE	814	Fault CHASSIS TILT SENSOR NOT CALIBRATED (813) is not present and Tilt sensor measurement > 19° for 4 seconds. Not to be reported during Tilt Sensor calibration.	No additional action required beyond Tilted requirements specified elsewhere; UGM reports a combined chassis tilt angle of 90 degrees; UGM shall report individual axis readings	Not all of the trigger conditions are met.	X	X

## SECTION 6 - JLG CONTROL SYSTEM

**Table 6-11. Diagnostic Trouble Code Chart**

Help Message	DTC	Fault Condition/Trigger (For configurable items, fault applies only if configured. All listed conditions to be met unless stated otherwise)	Required Control Response or State Assignment	Conditions Required for Movement and/or to Clear Fault	400S	450AJ
TI LT SENSOR STAGNANT	818	The UGM detects the following conditions: The X axis or Y axis filtered readings change by < ±0.1° in 5 second; Drive Forward or Drive Reverse output value is ≥ Creep output value; Do not report if DTC 823 is active	The UGM shall consider the machine Tilted; UGM reports a combined chassis tilt angle of 90 degrees; The UGM reports individual axis readings	Power Cycled	X	X
LSS CELL #1 ERROR	821	MACHINE SETUP > LOAD SYSTEM ≠ NO; Load System is the 4-Cell LSS; The UGM detects that LSS is reporting error with Cell #1	UGM to set Platform Load State = Overloaded	Not all of the trigger conditions are met	X	X
LSS CELL #2 ERROR	822	MACHINE SETUP > LOAD SYSTEM ≠ NO; Load System is the 4-Cell LSS; The UGM detects that LSS is reporting error with Cell #2	UGM to set Platform Load State = Overloaded	Not all of the trigger conditions are met	X	X
LSS CELL #3 ERROR	823	MACHINE SETUP > LOAD SYSTEM ≠ NO; Load System is the 4-Cell LSS; The UGM detects that LSS is reporting error with Cell #3	UGM to set Platform Load State = Overloaded	Not all of the trigger conditions are met	X	X
LSS CELL #4 ERROR	824	MACHINE SETUP > LOAD SYSTEM ≠ NO; Load System is the 4-Cell LSS; The UGM detects that LSS is reporting error with Cell #4.	UGM to set Platform Load State = Overloaded	Not all of the trigger conditions are met	X	X
LSS HAS NOT BEEN CALIBRATED	825	The load sensing system is configured but has not been calibrated.  The machine will assume the platform is overloaded.	UGM to set Platform Load State = Overloaded	Calibrate the load sensing system.	X	X
RUNNING AT CREEP – PLAT-FORM OVERLOADED	826	Machine Setup > LOAD SYSTEM = WARN ONLY The platform is Overloaded Ground mode is active with Auxiliary Power/Emergency Descent mode not active or Platform mode is active	Refer to Table 7-1 for machine response.	Not all of the trigger conditions are met	X	X
DRIVE & BOOM PREVENTED – PLATFORM OVERLOADED	827	The Platform is Overloaded and Machine Setup > LOAD SYSTEM = CUTOUT PLATFORM, Platform Mode is active, and conditions of Table 7-1 apply. -or- The Platform is Overloaded and Machine Setup > LOAD SYSTEM = CUTOUT ALL and conditions of Table 7-1 apply.	Refer to Table 7-1 for machine response.	Not all of the trigger conditions are met	X	X
LIFT UP & TELEOUT PREVENTED – PLATFORM OVERLOADED	828	MACHINE SETUP > LOAD SYSTEM = SPECIAL 1 Platform Mode is active The platform is Overloaded	Refer to Table 7-1 for machine response.	Not all of the trigger conditions are met	X	X
LSS READING UNDER WEIGHT	8211	LSS has been calibrated and the UGM has determined that the load sensing system reading is underweight while a period of time while operating drive or boom lift up at speeds greater than creep OR the UGM has determined that the load sensing system reading is less than -1.5 x Gross Platform Weight.  The machine will assume the platform is overloaded. This fault, once annunciated is latched within a given key cycle.		Ensure platform is not resting on the ground or is not leveled at an extreme negative angle.  Re-calibrate the load sensing system if the above items are not a factor.	X	X

Table 6-11. Diagnostic Trouble Code Chart

Help Message	DTC	Fault Condition/Trigger (For configurable items, fault applies only if configured. All listed conditions to be met unless stated otherwise)	Required Control Response or State Assignment	Conditions Required for Movement and/or to Clear Fault	400S	450AJ
LSS SENSOR DISAGREEMENT	8218	The control system has determined that the difference between the calculated load for sensor 1 and sensor 2 differ by more than 50 lb OR the internal strain gauge sensor 1 gross platform weight reading and the internal strain gauge sensor 2 gross platform weight reading differ by more than 200 lb.  If the platform is not considered to be overloaded boom functions will be restricted to creep.  This fault, once annunciated is latched within a given key cycle.		Attempt to re-calibrate the load sensing system.  Possible sensor hardware issue.	X	X
LSS SENSOR- OUT OF RANGE HIGH	8219	MACHINE SETUP > LOAD SYSTEM ≠ NO; Load System is the 1-Cell LSS; Strain Gauge 1 or 2 reports Out of Range High error	UGM to set Platform Load State = Overloaded	Power Cycled	X	X
LSS SENSOR- OUT OF RANGE LOW	8220	MACHINE SETUP > LOAD SYSTEM ≠ NO; Load System is the 1-Cell LSS; Strain Gauge 1 or 2 reports Out of Range Low error	UGM to set Platform Load State = Overloaded	Power Cycled	X	X
LSS SENSOR- OUT OF CALIBRATION	8221	MACHINE SETUP > LOAD SYSTEM ≠ NO; Load System is the 1-Cell LSS; Strain Gauge 1 or 2 reports Not Calibrated error	UGM to set Platform Load State = Overloaded	Power Cycled	X	X
LSS STRAIN GAUGE 1 - STAGNANT	8222	The control system has determined that the strain gauge 1 reading in the load sensor is stagnant (not changing).  If the platform is not considered to be overloaded boom functions will be restricted to creep.  If DTC 8223 is active in combination with DTC 8222 the machine will assume the platform is overloaded.  This fault, once annunciated is latched within a given key cycle.		Possible sensor hardware issue.		
LSS STRAIN GAUGE 2 - STAGNANT	8223	The control system has determined that the strain gauge 2 reading in the load sensor is stagnant (not changing).  If the platform is not considered to be overloaded boom functions will be restricted to creep.  If DTC 8222 is active in combination with DTC 8223 the machine will assume the platform is overloaded.  This fault, once annunciated is latched within a given key cycle.		Possible sensor hardware issue.		

## SECTION 6 - JLG CONTROL SYSTEM

**Table 6-11. Diagnostic Trouble Code Chart**

Help Message	DTC	Fault Condition/Trigger (For configurable items, fault applies only if configured. All listed conditions to be met unless stated otherwise)	Required Control Response or State Assignment	Conditions Required for Movement and/or to Clear Fault	400S	450AJ
LSS STRAIN GAUGE 1 - OUT OF RANGE LOW	8224	The shear beam is reporting an out of range low issue with the strain gauge 1 reading.  If the platform is not overloaded the machine will be placed in to creep.  If DTC8225 is also active the machine will assume the platform is overloaded.  This fault, once annunciated is latched within a given key cycle.		Possible sensor hardware issue.		
LSS STRAIN GAUGE 2 - OUT OF RANGE LOW	8225	The shear beam is reporting an out of range low issue with the strain gauge 2 reading.  If the platform is not overloaded the machine will be placed in to creep.  If DTC8224 is also active the machine will assume the platform is overloaded.  This fault, once annunciated is latched within a given key cycle.		Possible sensor hardware issue.		
LSS STRAIN GAUGE 1 - OUT OF RANGE HIGH	8226	The shear beam is reporting an out of range high issue with the strain gauge 1 reading.  If the platform is not overloaded the machine will be placed in to creep.  If DTC8227 is also active the machine will assume the platform is overloaded.  This fault, once annunciated is latched within a given key cycle.		Possible sensor hardware issue.		
LSS STRAIN GAUGE 2 - OUT OF RANGE HIGH	8227	The shear beam is reporting an out of range high issue with the strain gauge 2 reading.  If the platform is not overloaded the machine will be placed in to creep.  If DTC8226 is also active the machine will assume the platform is overloaded.  This fault, once annunciated is latched within a given key cycle.		Possible sensor hardware issue.		

Table 6-11. Diagnostic Trouble Code Chart

Help Message	DTC	Fault Condition/Trigger (For configurable items, fault applies only if configured. All listed conditions to be met unless stated otherwise)	Required Control Response or State Assignment	Conditions Required for Movement and/or to Clear Fault	400s	450AJ
LSS STRAIN GAUGE 1 - INITIAL-IZATION ERROR	8228	The shear beam is reporting an initialization issue with the strain gauge 1 sensor.  If the platform is not overloaded the machine will be placed in to creep.  If DTC8229 is also active the machine will assume the platform is overloaded.  This fault, once annunciated is latched within a given key cycle.		Possible sensor hardware issue.		
LSS STRAIN GAUGE 2 - INITIAL-IZATION ERROR	8229	The shear beam is reporting an initialization issue with the strain gauge 2 sensor.  If the platform is not overloaded the machine will be placed in to creep.  If DTC8228 is also active the machine will assume the platform is overloaded.  This fault, once annunciated is latched within a given key cycle.		Possible sensor hardware issue.		
LSS STRAIN GAUGE 1 - NOT CALIBRATED	8230	The shear beam is reporting a calibration issue with the strain gauge 1 sensor.  If the platform is not overloaded the machine will be placed in to creep.  If DTC8231 is also active the machine will assume the platform is overloaded.  This fault, once annunciated is latched within a given key cycle.		Possible sensor hardware issue.		
LSS STRAIN GAUGE 2 - NOT CALIBRATED	8231	The shear beam is reporting a calibration issue with the strain gauge 2 sensor.  If the platform is not overloaded the machine will be placed in to creep.  If DTC8230 is also active the machine will assume the platform is overloaded.  This fault, once annunciated is latched within a given key cycle.		Possible sensor hardware issue.		

## SECTION 6 - JLG CONTROL SYSTEM

**Table 6-11. Diagnostic Trouble Code Chart**

Help Message	DTC	Fault Condition/Trigger (For configurable items, fault applies only if configured. All listed conditions to be met unless stated otherwise)	Required Control Response or State Assignment	Conditions Required for Movement and/or to Clear Fault	400S	450AJ
LSS STRAIN GAUGE 1 - SENSOR DEFECT	8232	The shear beam is reporting a sensor defect issue with the strain gauge 1 sensor.  If the platform is not overloaded the machine will be placed in to creep.  If DTC8233 is also active the machine will assume the platform is overloaded.  This fault, once annunciated is latched within a given key cycle.		Possible sensor hardware issue.		
LSS STRAIN GAUGE 2 - SENSOR DEFECT	8233	The shear beam is reporting a sensor defect issue with the strain gauge 2 sensor.  If the platform is not overloaded the machine will be placed in to creep.  If DTC8232 is also active the machine will assume the platform is overloaded.  This fault, once annunciated is latched within a given key cycle.		Possible sensor hardware issue.		
LSS STRAIN GAUGE 1 - NOT INSTALLED	8234	The shear beam is reporting a not installed issue with the strain gauge 1 sensor.  If the platform is not overloaded the machine will be placed in to creep.  If DTC8235 is also active the machine will assume the platform is overloaded.  This fault, once annunciated is latched within a given key cycle.		Possible sensor hardware issue.		
LSS STRAIN GAUGE 2 - NOT INSTALLED	8235	The shear beam is reporting a not installed issue with the strain gauge 2 sensor.  If the platform is not overloaded the machine will be placed in to creep.  If DTC8234 is also active the machine will assume the platform is overloaded.  This fault, once annunciated is latched within a given key cycle.		Possible sensor hardware issue.		

Table 6-11. Diagnostic Trouble Code Chart

Help Message	DTC	Fault Condition/Trigger (For configurable items, fault applies only if configured. All listed conditions to be met unless stated otherwise)	Required Control Response or State Assignment	Conditions Required for Movement and/or to Clear Fault	400S	450AJ
LSS NOT DETECTING CHANGE	8236	The control system has determined that the load sensor reading has not deviated by more than 1lb for 5s while operating drive or boom functions at greater than creep speed.  This fault, once annunciated is latched within a given key cycle.		Possible sensor hardware issue.		
LSS STRAIN GAUGE 1 - A/D DEFECT	8237	The shear beam is reporting an internal issue with the strain gauge 1 sensor.  If the platform is not overloaded the machine will be placed in to creep.  If DTC 8238 is also active the machine will assume the platform is overloaded.  This fault, once annunciated is latched within a given key cycle.		Possible sensor hardware issue.		
LSS STRAIN GAUGE 2 - A/D DEFECT	8238	The shear beam is reporting an internal issue with the strain gauge 2 sensor.  If the platform is not overloaded the machine will be placed in to creep.  If DTC 8237 is also active the machine will assume the platform is overloaded.  This fault, once annunciated is latched within a given key cycle.		Possible sensor hardware issue.		
FRONT LEFT STEER VALVE – OPEN CIRCUIT	8639	The UGM detects an open circuit at this output	Steer Left and Right speed limited to Creep (340AJ, 400S, 450AJ); No response required for this DTC (18RS, 24RS)	Power Cycled	X	X
FRONT LEFT STEER VALVE – SHORT TO BATTERY	8640	The UGM detects a short to battery at this output	Disable UGM Drive Forward/Reverse and Steer Left/Right outputs	Power Cycled	X	X
FRONT LEFT STEER VALVE – SHORT TO GROUND	8641	The UGM detects a short to ground at this output	Disable UGM Steer Left and Right outputs	Power Cycled	X	X
FRONT RIGHT STEER VALVE – OPEN CIRCUIT	8642	The UGM detects an open circuit at this output	Steer Left and Right speed limited to Creep (340AJ, 400S, 450AJ); No response required for this DTC (18RS, 24RS)	Power Cycled	X	X
FRONT RIGHT STEER VALVE – SHORT TO BATTERY	8643	The UGM detects a short to battery at this output	Disable UGM Drive Forward/Reverse and Steer Left/Right outputs	Power Cycled	X	X
FRONT RIGHT STEER VALVE – SHORT TO GROUND	8644	The UGM detects a short to ground at this output	Disable UGM Steer Left and Right outputs	Power Cycled	X	X

## SECTION 6 - JLG CONTROL SYSTEM

**Table 6-11. Diagnostic Trouble Code Chart**

Help Message	DTC	Fault Condition/Trigger (For configurable items, fault applies only if configured. All listed conditions to be met unless stated otherwise)	Required Control Response or State Assignment	Conditions Required for Movement and/or to Clear Fault	400S	450AJ
MACHINE SAFETY SYSTEM OVERRIDE OCCURRED	873	MSSO = Active	Response described in MSSO Influence on Machine Operation section	Fault shall be retentive through Power Cycled; Can be reset only with an Analyzer via the CALIBRATIONS > MSSO > MSSO RESET menu	X	X
LSS WATCHDOG RESET	991	MACHINE SETUP > LOAD SYSTEM ≠ NO; Load System is the 4-Cell LSS; UGM detects LSS report of an anomaly exists that has caused a WatchDog Timer reset.	UGM to set Platform Load State = Overloaded	Power Cycled	X	X
LSS EEPROM ERROR	992	MACHINE SETUP > LOAD SYSTEM ≠ NO; Load System is the 4-Cell LSS; UGM detects LSS report of an anomaly that exists in the LSS EEPROM	UGM to set Platform Load State = Overloaded	Power Cycled	X	X
LSS INTERNAL ERROR – PIN EXCITATION	993	MACHINE SETUP > LOAD SYSTEM ≠ NO; Load System is the 4-Cell LSS; UGM detects LSS report of improper excitation voltage	UGM to set Platform Load State = Overloaded	Power Cycled	X	X
LSS INTERNAL ERROR – DRDY MISSING FROM A/D	994	MACHINE SETUP > LOAD SYSTEM ≠ NO; Load System is the 4-Cell LSS; UGM detects LSS report of an anomaly that exists in the LSS A/D converter operations.	UGM to set Platform Load State = Overloaded	Power Cycled	X	X
EEPROM FAILURE - CHECK ALL SETTINGS	998	The UGM has detected an anomaly in EEPROM	Disable all machine and engine functions (i.e., command engine shutdown and do not permit start); reset the section of EEPROM where the failure occurred to defaults.	Power Cycled	X	X
FUNCTIONS LOCKED OUT - PLATFORM MODULE SOFTWARE VERSION IMPROPER	9910	The UGM software version type is 'P' or 'B' The UGM has received valid version information from the PM The PM software version type is 'P' or 'B' The UGM software major version number does not match the major version number of the platform software	Activate the platform alarm continuously Creep mode is active If Platform Mode is active, disable all Drive, Steer, and Boom functions and do not permit Machine Enable	Not all of the trigger conditions are met	X	X
FUNCTION LOCKED OUT - LSS MODULE SOFTWARE VERSION IMPROPER	9911	MACHINE SETUP > LOAD SYSTEM ≠ NO; Load System is the 4-Cell LSS; The UGM determines that the LSS software version is not compatible with existing code.	UGM to set Platform Load State = Overloaded	Power Cycled	X	X
CHASSIS TILT SENSOR NOT GAIN CALIBRATED	9915	The tilt sensor gain calibration values recorded to flash memory during Phoenix International's manufacturing test are not present	The UGM reports a faulted chassis tilt angle of 90 degrees	Valid values are present	X	X
PLATFORM SENSOR REF VOLTAGE OUT OF RANGE	9920	The PM detects that its reference voltage is out of range and reports the fault to the UGM	If in Platform mode, Lift/Swing and Drive shall be placed in Creep. All other functions shall operate normally.	Power Cycled	X	X

Table 6-11. Diagnostic Trouble Code Chart

Help Message	DTC	Fault Condition/Trigger (For configurable items, fault applies only if configured. All listed conditions to be met unless stated otherwise)	Required Control Response or State Assignment	Conditions Required for Movement and/or to Clear Fault	400S	450AJ
GROUND MODULE FAIL-URE:HIGHSIDEDRIVERCUTOFFAULTY	9921	The engine is not running The engine is not cranking The UGM footswitch input J7-15 is LOW The machine is in Platform Mode The Main Dump output J2-13 is detected as HIGH via the analog feedback 300ms after it is attempted to be activated during the one time startup test of the UGM hardware shutoff circuitry	Disable all Drive/Steer and Boom functions except Tower Lift Down (340AJ, 450AJ), Lift Down, and Jib Lift Down (340AJ).	Power Cycled	X	X
PLATFORM MODULE FAILURE: HWFS CODE 1	9922	The PM detects that its V(low) FET has failed and reports this fault to the UGM	No response required for this DTC	Power Cycled	X	X
FUNCTIONS LOCKED OUT - MACHINE NOT CONFIGURED	9924	The machine is powered up and no model has been selected yet in the MACHINE SETUP menu	Display ??? or NO MODEL at Analyzer MACHINE SETUP menu MACHINE SETUP->MODEL NUMBER Do not report any other faults Disable all machine and engine functions (i.e., command engine shutdown and do not permit start)	Power Cycled	X	X
GROUND MODULE CONSTANT DATA UPDATE REQUIRED	9927	The UGM detects one of the following conditions when software type is 'P' or 'B': The Version Verification Word #1 or the Version Verification Word #2 values located in the constant data sector offlash memory (found on constant data spreadsheet tab pstConstantDataVersion) do not match the values located in the code area of flash memory The Version Major value located in the constant data sector of flash memory (found on constant data spreadsheet tab pstConstantDataVersion) does not match the value located in the code area of flash memory	Disable all machine and engine functions (i.e., command engine shutdown and do not permit start)	A different application code or constant data version is programmed so that the values match Power Cycled	X	X
CURRENT FEEDBACK GAINS OUT OF RANGE	9944	One or more of the current feedback gains that are calculated and written to flash memory during the PIC manufacturing test process are detected as being out of range	A gain of 1 is used for the factory gain(s) that was out of range; all functions shall be placed in Creep mode.	Power Cycled	X	X
CURRENT FEEDBACK CALIBRATION CHECKSUM INCORRECT	9945	The current feedback gains checksum that is calculated and written to flash memory during the PIC manufacturing test process is detected as being incorrect	Disable all machine and engine functions (i.e., command engine shutdown and do not permit start).	Power Cycled	X	X

Table 6-11. Diagnostic Trouble Code Chart

Help Message	DTC	Fault Condition/Trigger (For configurable items, fault applies only if configured. All listed conditions to be met unless stated otherwise)	Required Control Response or State Assignment	Conditions Required for Movement and/or to Clear Fault	400S	450AJ
MACHINE CONFIGURATION OUT OF RANGE – CHECK ALL SETTINGS	9949	UGM has detected an anomaly in EEPROM with regard to the Machine Setup configuration.	UGM to prompt operator to correct issue via Analyzer and disable all machine and engine functions (i.e., command engine shutdown and do not permit start) until EEPROM data in corrupted area is changed.	Power Cycled and EEPROM data in associated area is changed	X	X
LSS CORRUPT EEPROM	9977	MACHINE SETUP > LOAD SYSTEM ≠ NO; Load System is the 4-Cell LSS; and one of the following conditions: UGM determines LSS-stored values for Unloaded weight in Indirect 0x100 ≠ 0x108 or UGM determines LSS-stored values for Accessory weight in Indirect 0x102 ≠ 0x10A UGM determines LSS-stored checksum1 (0x10F) ≠ checksum 2 (0x107)	UGM to set Platform Load State = Overloaded	Power Cycled	X	X
FUNCTIONS LOCKED OUT - GROUND MODULE SOFTWARE VERSION IMPROPER	9979	Ground software has been installed on a UGM with a ST10F274 processor (Hardware Rev < 6), which does not have guaranteed flash storage in the sector where Constant Data is written.	Disable all machine and engine functions (i.e., command engine shutdown and do not permit start)	Power Cycled	X	X
GROUND MODULE VLOW FET FAILURE	9986	VLow FET determined to be failed because all Digital Inputs are high; UGM unable to read high-sensing inputs.	Disable all machine and engine functions (i.e., command engine shutdown and do not permit start).	Power Cycled	X	X
LSS INTERNAL ERROR	99171	MACHINE SETUP > LOAD SYSTEM ≠ NO; Load System is the 1-Cell LSS; Strain Gauge 1 or 2 reports Initialization, Defect or Not Installed error	UGM to set Platform Load State = Overloaded	Power Cycled	X	X
LSS-FACTORY CALIBRATION ERROR	99285	The load sensor is reporting a factor calibration issue (internal error)  The machine will assume the platform is overloaded.  This fault, once annunciated is latched within a given key cycle.		Possible sensor hardware issue.

Discount-Equipment.com is your online resource for quality parts & equipment.

Florida: **561-964-4949** Outside Florida TOLL FREE: **877-690-3101**

Need parts?

Click on this link: <http://www.discount-equipment.com/category/5443-parts/> and choose one of the options to help get the right parts and equipment you are looking for. Please have the machine model and serial number available in order to help us get you the correct parts. If you don't find the part on the website or on one of the online manuals, please fill out the request form and one of our experienced staff members will get back to you with a quote for the right part that your machine needs.

We sell worldwide for the brands: Genie, Terex, JLG, MultiQuip, Mikasa, Essick, Whiteman, Mayco, Toro Stone, Diamond Products, Generac Magnum, Airman, Haulotte, Barreto, Power Blanket, Nifty Lift, Atlas Copco, Chicago Pneumatic, Allmand, Miller Curber, Skyjack, Lull, Skytrak, Tsurumi, Husqvarna Target, , Stow, Wacker, Sakai, Mi-T- M, Sullair, Basic, Dynapac, MBW, Weber, Bartell, Bennar Newman, Haulotte, Ditch Runner, Menegotti, Morrison, Contec, Buddy, Crown, Edco, Wyco, Bomag, Laymor, Barreto, EZ Trench, Bil-Jax, F.S. Curtis, Gehl Pavers, Heli, Honda, ICS/PowerGrit, IHI, Partner, Imer, Clipper, MMD, Koshin, Rice, CH&E, General Equipment, AMida, Coleman, NAC, Gradall, Square Shooter, Kent, Stanley, Tamco, Toku, Hatz, Kohler, Robin, Wisconsin, Northrock, Oztec, Toker TK, Rol-Air, Small Line, Wanco, Yanmar

## SECTION 7. BASIC ELECTRICAL INFORMATION & SCHEMATICS

### 7.1 GENERAL

This section contains basic electrical information and schematics to be used for locating and correcting most of the operating problems which may develop. If a problem should develop which is not presented in this section or which is not corrected by listed corrective actions, technically qualified guidance should be obtained before proceeding with any maintenance.

**NOTE:** Some of the procedures/connectors shown in this section may not be applicable to all models.

### 7.2 MULTIMETER BASICS

A wide variety of multimeters or Volt Ohm Meters (VOM) can be used for troubleshooting your equipment. This section shows diagrams of a common, digital VOM configured for several different circuit measurements. Instructions for your VOM may vary. Please consult the meter operator's manual for more information.

#### Grounding

"Grounding the meter" means to take the black lead (which is connected to the COM (common) or negative port) and touch it to a good path to the negative side of the Voltage source.

#### Backprobing

To "backprobe" means to take the measurement by accessing a connector's contact on the same side as the wires, the back of the connector. Readings can be done while maintaining circuit continuity this way. If the connector is the sealed type, great care must be taken to avoid damaging the seal around the wire. It is best to use probes or probe tips specifically designed for this technique, especially on sealed connectors. Whenever possible insert probes into the side of the connector such that the test also checks both terminals of the connection. It is possible to inspect a connection within a closed connector by backprobing both sides of a connector terminal and measuring resistance. Do this after giving each wire a gentle pull to ensure the wires are still attached to the contact and contacts are seated in the connector.

#### Min/Max

Use of the "Min/Max" recording feature of some meters can help when taking measurements of intermittent conditions while alone. For example, you can read the Voltage applied to a solenoid when it is only operational while a switch, far from the solenoid and meter, is held down.

#### Polarity

Getting a negative Voltage or current reading when expecting a positive reading frequently means the leads are reversed. Check what reading is expected, the location of the signal and that the leads are connected to the device under test correctly. Also check that the lead on the "COM" port goes to the Ground or negative side of the signal and the lead on the other port goes to the positive side of the signal.

#### Scale

M = Mega = 1,000,000 \* (Displayed Number)

k = kilo = 1,000 \* (Displayed Number)

m = milli = (Displayed Number) / 1,000

$\mu$  = micro = (Displayed Number) / 1,000,000

Example: 1.2 kW = 1200 W

Example: 50 mA = 0.05 A

#### Voltage Measurement

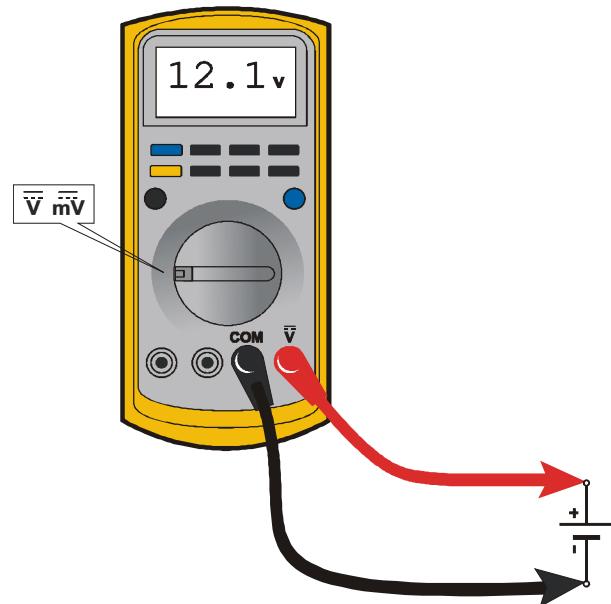

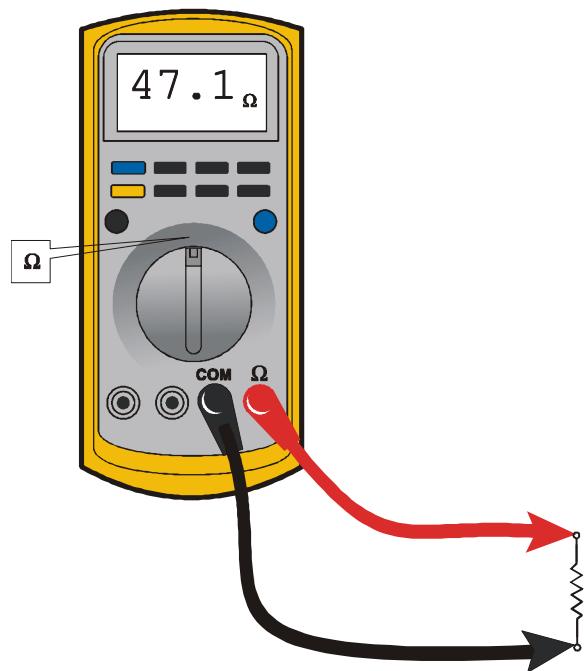

Figure 7-1. Voltage Measurement (DC)

- If meter is not auto ranging, set it to the correct range (See multimeter's operation manual)
- Use firm contact with meter leads

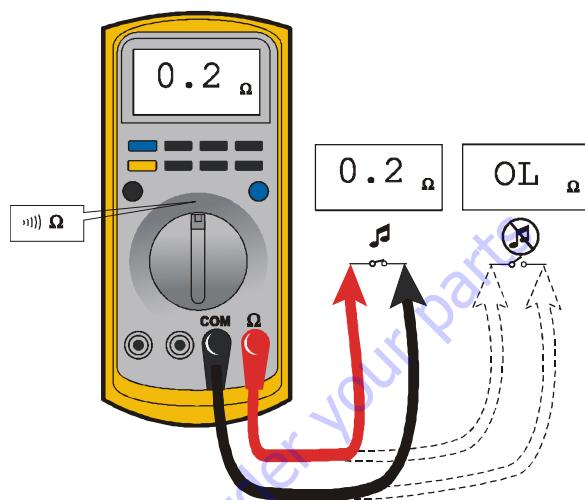

## Resistance Measurement

**Figure 7-2. Resistance Measurement**

- First test meter and leads by touching leads together. Resistance should read a short circuit (very low resistance).
- Circuit power must be turned OFF before testing resistance.
- Disconnect component from circuit before testing.
- If meter is not auto ranging, set it to the correct range (See multimeter's operation manual).
- Use firm contact with meter leads.

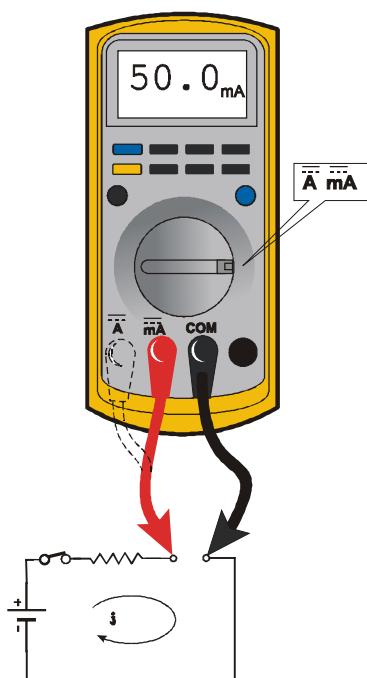

## Continuity Measurement

**Figure 7-3. Continuity Measurement**

- Some meters require a separate button press to enable audible continuity testing.
- Circuit power must be turned OFF before testing continuity.
- Disconnect component from circuit before testing.
- Use firm contact with meter leads.
- First test meter and leads by touching leads together. Meter should produce an audible alarm, indicating continuity.

## Current Measurement

**Figure 7-4. Current Measurement (DC)**

- Set up the meter for the expected current range.
- Be sure to connect the meter leads to the correct jacks for the current range you have selected.
- If meter is not auto ranging, set it to the correct range (See multi meter's operation manual).
- Use firm contact with meter leads.

## 7.3 APPLYING SILICONE DIELECTRIC COMPOUND TO ELECTRICAL CONNECTIONS

**NOTE:** This section is not applicable for battery terminals.

### NOTICE

JLG P/N 0100048 DIELECTRIC GREASE (NOVAGARD G661) IS THE ONLY MATERIAL APPROVED FOR USE AS A DIELECTRIC GREASE.

**NOTE:** Do NOT apply dielectric grease to the following connections:

- Main Boom Rotary sensor connections (on Celesco Sensor),
- LSS Modules connections,
- Deutz EMR 2 ECM connection.

Silicone Dielectric Compound must be used on all electrical connections except for those mentioned above for the following reasons:

- To prevent oxidation at the mechanical joint between male and female pins.
- To prevent electrical malfunction caused by low level conductivity between pins when wet.

Use the following procedure to apply Silicone Dielectric Compound to the electrical connectors. This procedure applies to all plug connections not enclosed in a box. Silicone grease should not be applied to connectors with external seals.

1. To prevent oxidation, silicone grease must be packed completely around male and female pins on the inside of the connector prior to assembly. This is most easily achieved by using a syringe.

**NOTE:** Over a period of time, oxidation increases electrical resistance at the connection, eventually causing circuit failure.

2. To prevent shorting, silicone grease must be packed around each wire where they enter the outside of the connector housing. Also, silicone grease must be applied at the joint where the male and female connectors come together. Any other joints (around strain reliefs, etc.) where water could enter the connector should also be sealed.

**NOTE:** This condition is especially common when machines are pressure washed since the washing solution is much more conductive than water.

3. Anderson connectors for the battery boxes and battery chargers should have silicone grease applied to the contacts only.

**NOTE:** Curing-type sealants might also be used to prevent shorting and would be less messy, but would make future pin removal more difficult.

When applied to electrical connections, dielectric grease helps to prevent corrosion of electrical contacts and improper conductivity between contacts from moisture intrusion. Open and sealed connectors benefit from the application of dielectric grease.

Dielectric grease shall be applied to all electrical connectors at the time of connection (except those noted under Exclusions).

### 7.4 DIELECTRIC GREASE APPLICATION

Dielectric grease helps to prevent corrosion of electrical contacts and improper conductivity between contacts from moisture intrusion. Non-waterproof connectors benefit from the application of dielectric grease.

#### Installation

The following is general guidance for the installation of dielectric grease in a connector system.

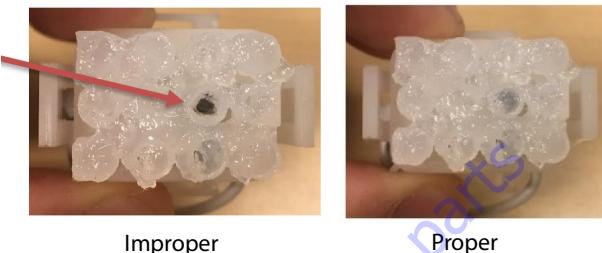

- Use dielectric grease in a tube for larger connection points or apply with a syringe for small connectors.
- Apply dielectric grease to plug/male connector housing which typically contains sockets contact/female terminals.
- Leave a layer of dielectric grease on the mating face of the connector, completely covering each connector terminal hole. Refer to the pictures shown below.

Assemble the connector system immediately to prevent moisture ingress or dust contamination.

The following connector systems are specifically addressed because of their widespread use at JLG. However, this guidance may be applied to similar devices.

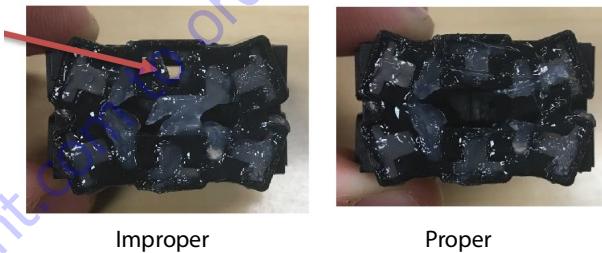

#### AMP Mate-N-Lok

This connector system is widely used inside enclosures for general-purpose interconnect. Follow the general guidance for installation.

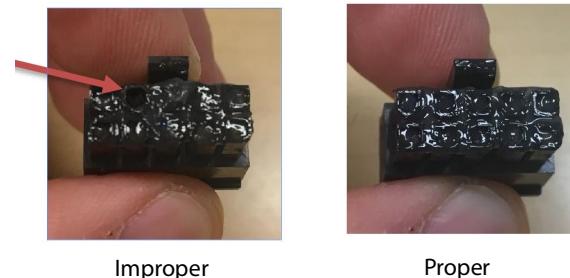

#### AMP Faston

This connector system is typically used on operator switches at JLG. Follow the general guidance for installation.

#### AMP Micro-Fit

This connector system is typically used on control modules at JLG. Follow the general guidance for installation.

### AMP Mini Fit Jr

This connector system is typically used on control modules at JLG. Follow the general guidance for installation.

Improper

Proper

### Exceptions

Some waterproof connector applications do benefit from dielectric grease, and some non waterproof connectors do not benefit from dielectric grease.

In the exceptions below, we have found dielectric grease is not needed for some applications, and in some cases can interfere with the intended connection. Dielectric grease shall be used as an exception in other applications.

### ENCLOSURES

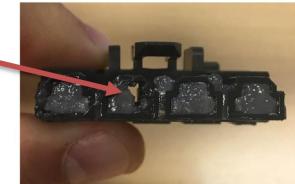

Application of dielectric grease is not required in properly sealed enclosures. To meet criteria, the enclosure must be rated to at least IP56 (dust protected; protected from powerful jets of water).

### CARLING SWITCH CONNECTORS

Carling switches may experience high impedance, or discontinuity, due to silicone dielectric grease ingress when switching inductive loads. Therefore, dielectric grease shall not be applied to Carling switch mating connectors unless specified by CAMP Connector.

### Mini Fit Sr

This connector system is typically used on control modules at JLG. Follow the general guidance for installation.

Improper

Proper

### DIN Connectors

This connector is typically used on hydraulic valves. Follow the installation instructions.

Improper

Proper

## 7.5 AMP CONNECTOR

### Applying Silicone Dielectric Compound to AMP Connectors

Silicone Dielectric Compound must be used on the AMP connections for the following reasons:

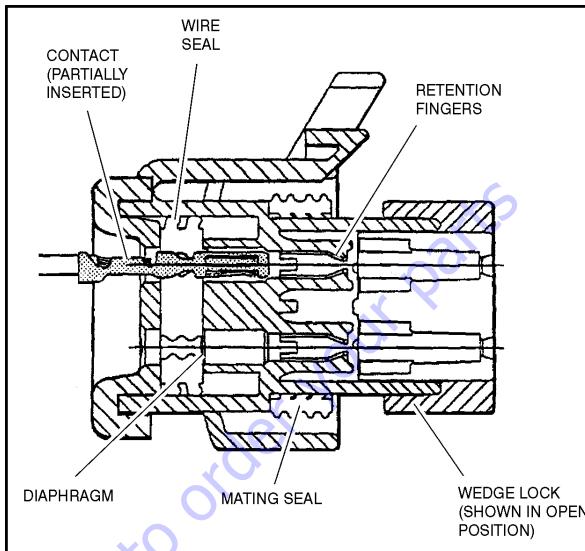

- To prevent oxidation at the mechanical joint between male and female pins.
- To prevent electrical malfunction caused by low level conductivity between pins when wet.

Use the following procedure to apply Silicone Dielectric Compound to the electrical connectors.

1. To prevent oxidation and low level conductivity, silicone dielectric grease must be packed completely around male and female pins on the inside of the connector after the mating of the housing to the header. This is easily achieved by using a syringe to fill the header with silicone dielectric compound, to a point just above the top of the male pins inside the header. When assembling the housing to the header, it is possible that the housing will become air locked, thus preventing the housing latch from engaging.
2. Pierce one of the unused wire seals to allow the trapped air inside the housing to escape.
3. Install a hole plug into this and/or any unused wire seal that has silicone dielectric compound escaping from it.

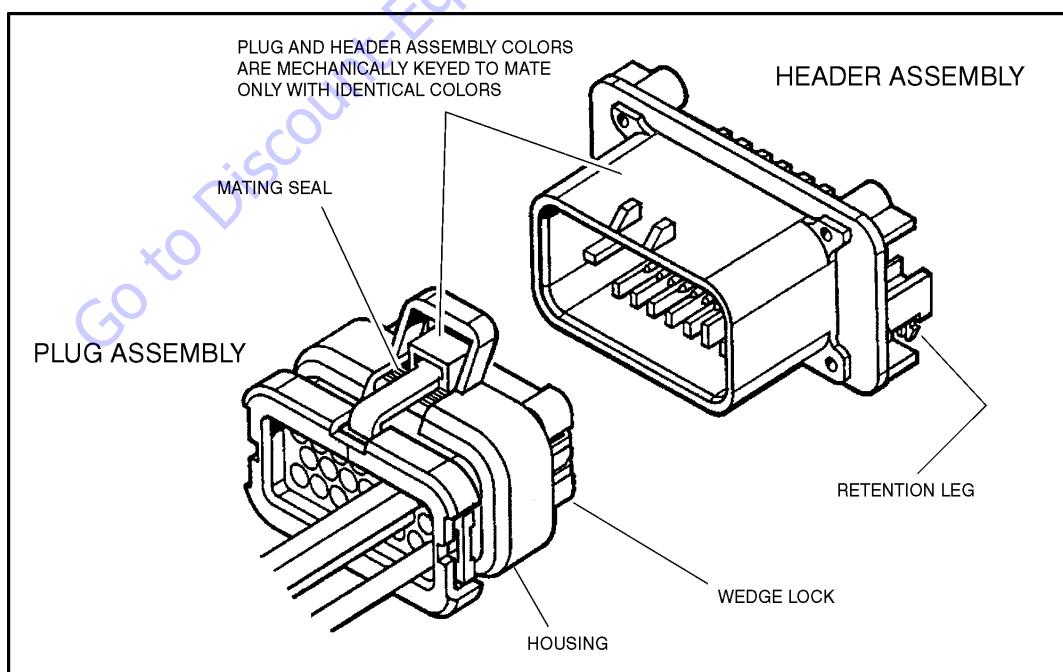

### Assembly

Check to be sure the wedge lock is in the open, or as-shipped, position (See Figure 7-5.). Proceed as follows:

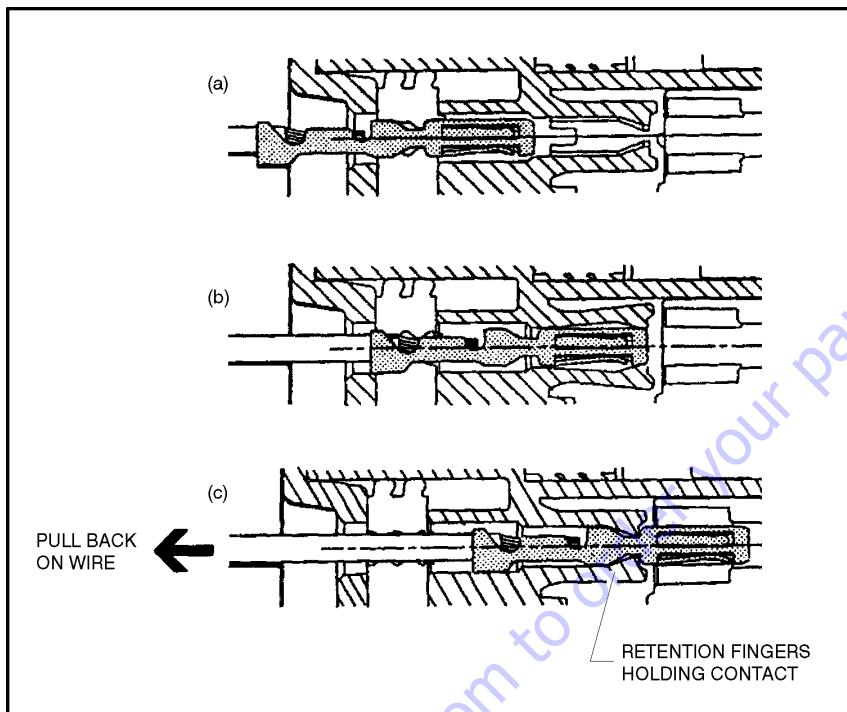

**Figure 7-5. Connector Assembly Figure 1**

1. To insert a contact, push it straight into the appropriate circuit cavity as far as it will go (See Figure 7-7.).
2. Pull back on the contact wire with a force of 1 or 2 lb to be sure the retention fingers are holding the contact (See Figure 7-7.).

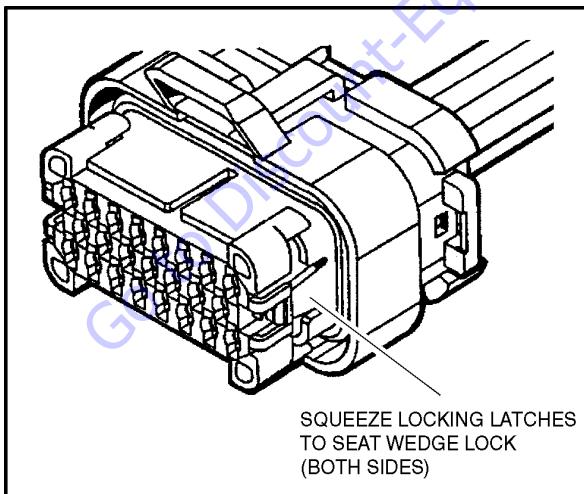

**Figure 7-6. AMP Connector**

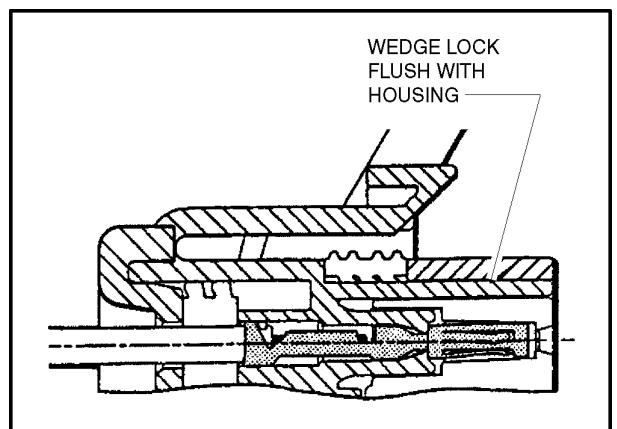

**Figure 7-7. Connector Assembly Figure 2**

3. After all required contacts have been inserted, the wedge lock must be closed to its locked position. Release the locking latches by squeezing them inward (See Figure 7-8.).
4. Slide the wedge lock into the housing until it is flush with the housing (See Figure 7-9).

**Figure 7-8. Connector Assembly Figure 3**

**Figure 7-9. Connector Assembly Figure 4**

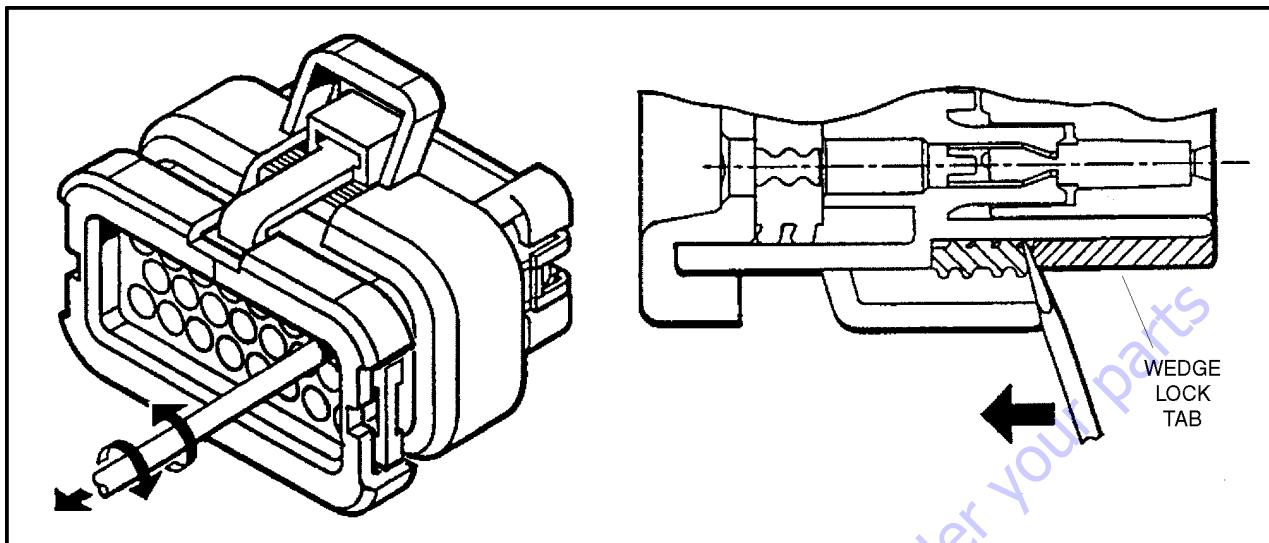

Figure 7-10. Connector Disassembly

## Disassembly

1. Insert a 4.8 mm (3/16") wide screwdriver blade between the mating seal and one of the red wedge lock tabs.
2. Pry open the wedge lock to the open position.
3. While rotating the wire back and forth over a half turn (1/4 turn in each direction), gently pull the wire until the contact is removed.

**NOTE:** *The wedge lock should never be removed from the housing for insertion or removal of the contacts.*

## Service - Voltage Reading

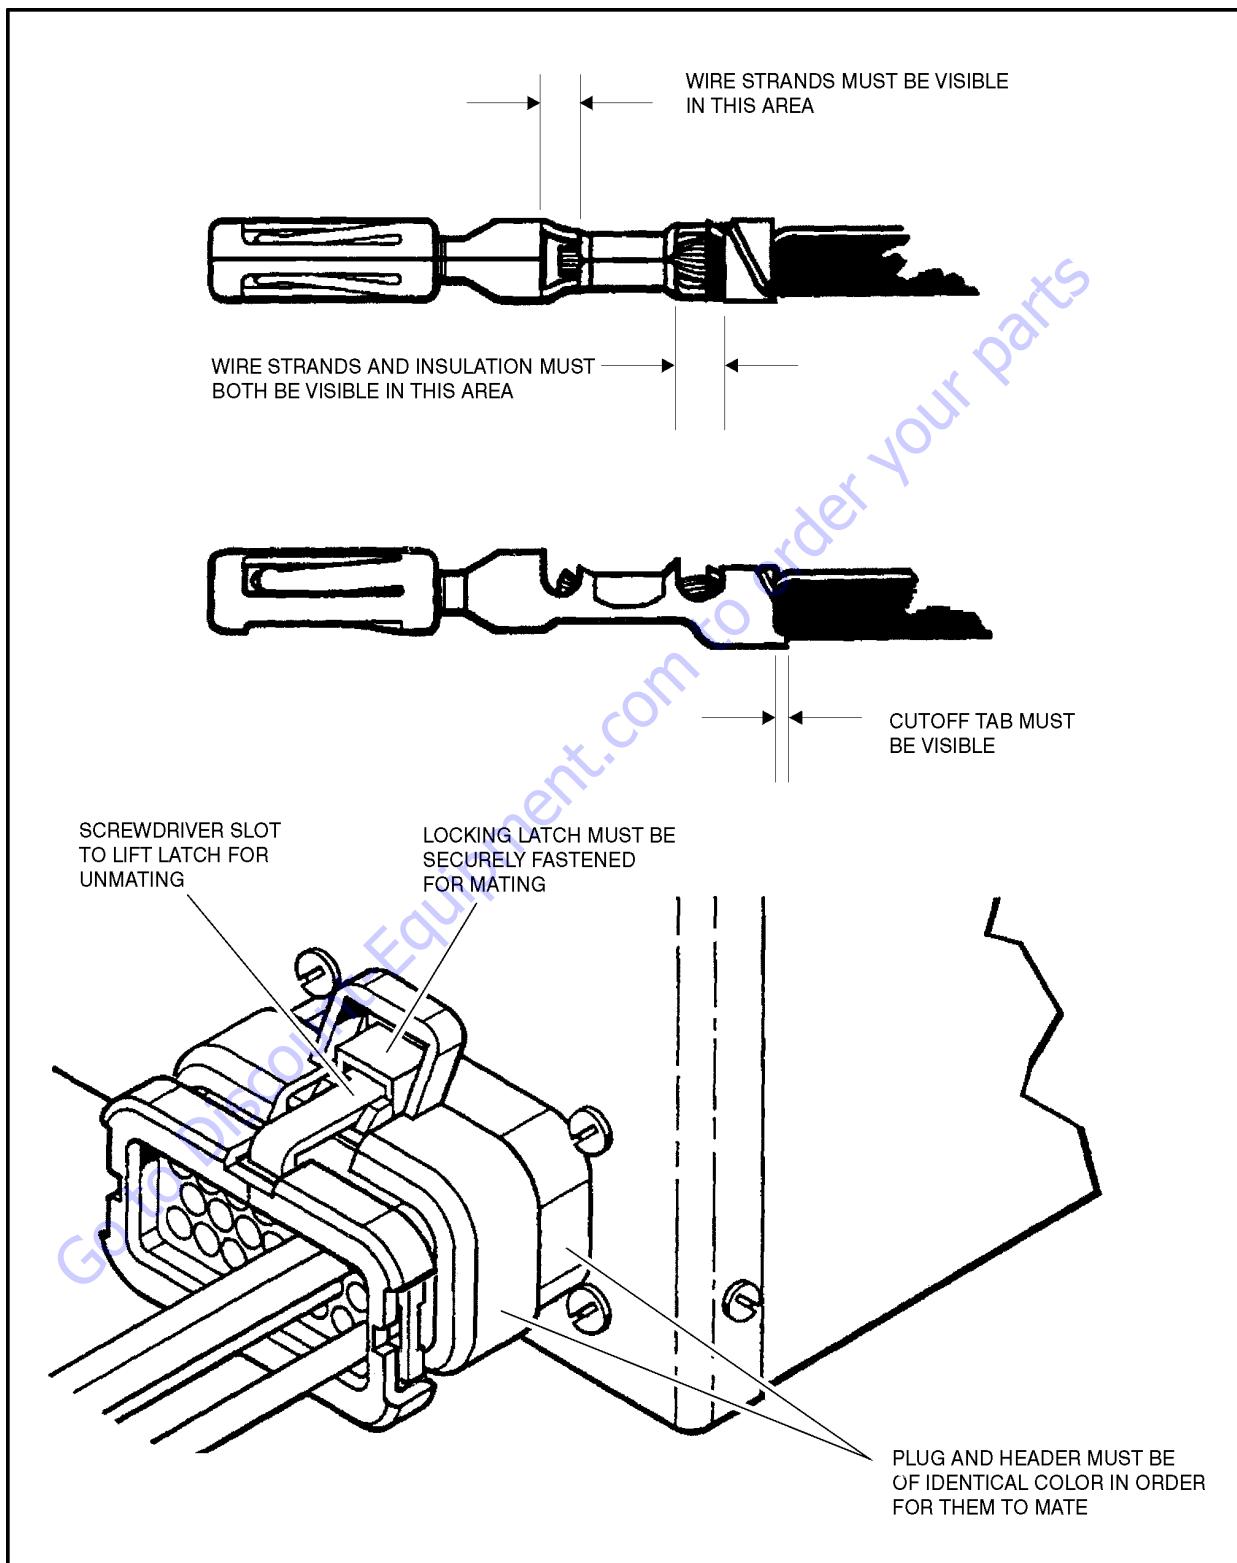

### NOTICE

**DO NOT PIERCE WIRE INSULATION TO TAKE VOLTAGE READINGS.**

It has been common practice in electrical troubleshooting to probe wires by piercing the insulation with a sharp point. This practice should be discouraged when dealing with the AMP-SEAL plug assembly, or any other sealed connector system. The resulting pinholes in the insulation will allow moisture to invade the system by traveling along the wire strands. This nullifies the effectiveness of the connector seals and could result in system failure.

## Wedge Lock

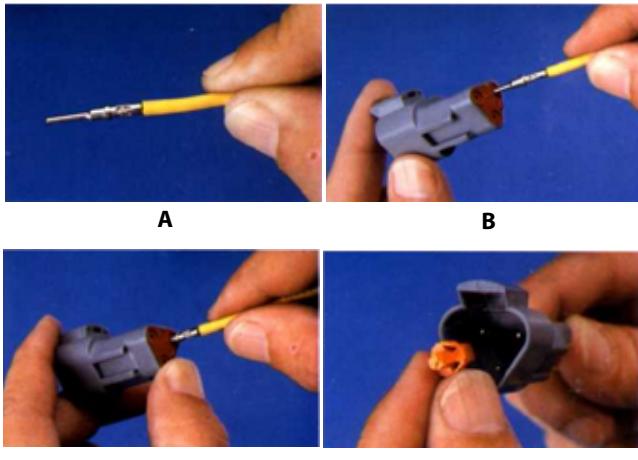

The wedge lock has slotted openings in the forward, or mating end. These slots accommodate circuit testing in the field, by using a flat probe such as a pocket knife. DO NOT use a sharp point such as an ice pick.

**Figure 7-11. Connector Installation**

## 7.6 DEUTSCH CONNECTORS

### DT/DTP Series Assembly

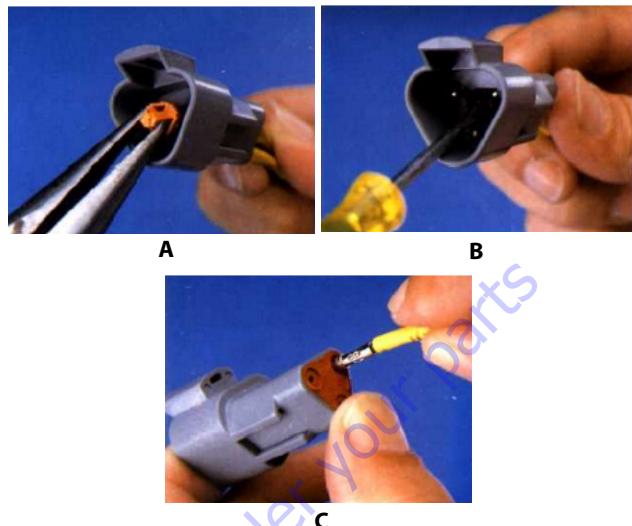

**Figure 7-12. DT/DTP Contact Installation**

1. Grasp crimped contact about 25mm behind the contact barrel.
2. Hold connector with rear grommet facing you.
3. Push contact straight into connector grommet until a click is felt. A slight tug will confirm that it is properly locked in place.
4. Once all contacts are in place, insert wedgelock with arrow pointing toward exterior locking mechanism. The wedgelock will snap into place. Rectangular wedges are not oriented. They may go in either way.

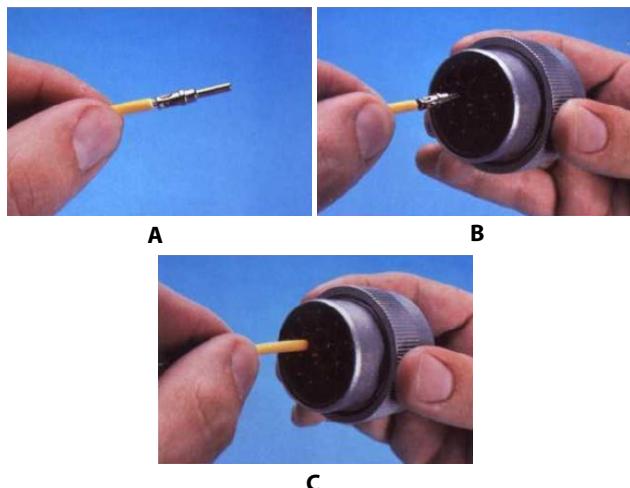

**NOTE:** The receptacle is shown - use the same procedure for plug.

### DT/DTP Series Disassembly

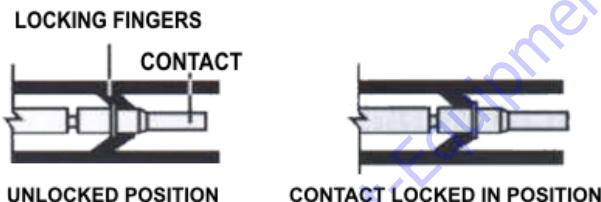

**Figure 7-13. DT/DTP Contact Removal**

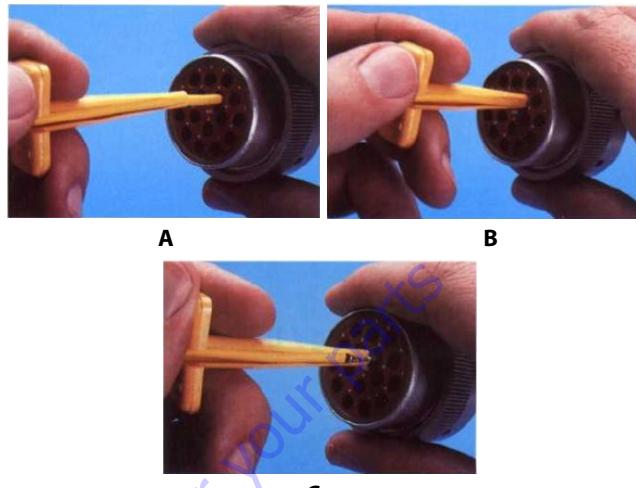

5. Remove wedgelock using needle nose pliers or a hook shaped wire to pull wedge straight out.
6. To remove the contacts, gently pull wire backwards, while at the same time releasing the locking finger by moving it away from the contact with a screwdriver.
7. Hold the rear seal in place, as removing the contact may displace the seal.

**HD30/HDP20 Series Assembly****Figure 7-14. HD/HDP Contact Installation**

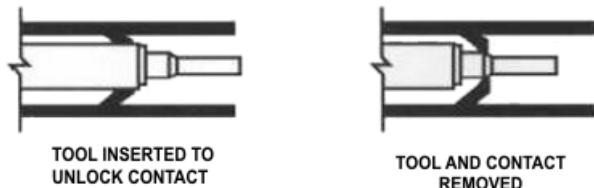

1. Grasp contact about 25mm behind the contact crimp barrel.
2. Hold connector with rear grommet facing you.
3. Push contact straight into connector grommet until a positive stop is felt. A slight tug will confirm that it is properly locked in place.

**Figure 7-15. HD/HDP Locking Contacts Into Position**

**NOTE:** For unused wire cavities, insert sealing plugs for full environmental sealing.

**HD30/HDP20 Series Disassembly****Figure 7-16. HD/HDP Contact Removal**

4. With rear insert toward you, snap appropriate size extractor tool over the wire of contact to be removed.
5. Slide tool along into the insert cavity until it engages contact and resistance is felt.
6. Pull contact-wire assembly out of connector.

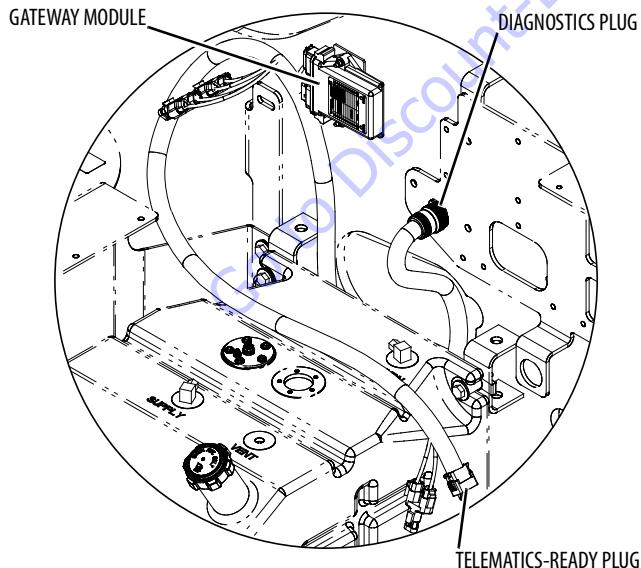

**Figure 7-17. HD/HDP Unlocking Contacts**

**NOTE:** Do Not twist or insert tool at an angle.

## 7.7 TELEMATICS GATEWAY

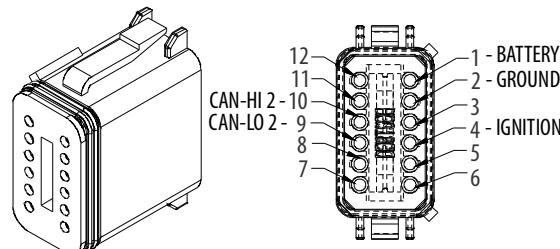

Personnel using machines equipped with an optional telematics gateway will be able to view the following data through their telematics device:

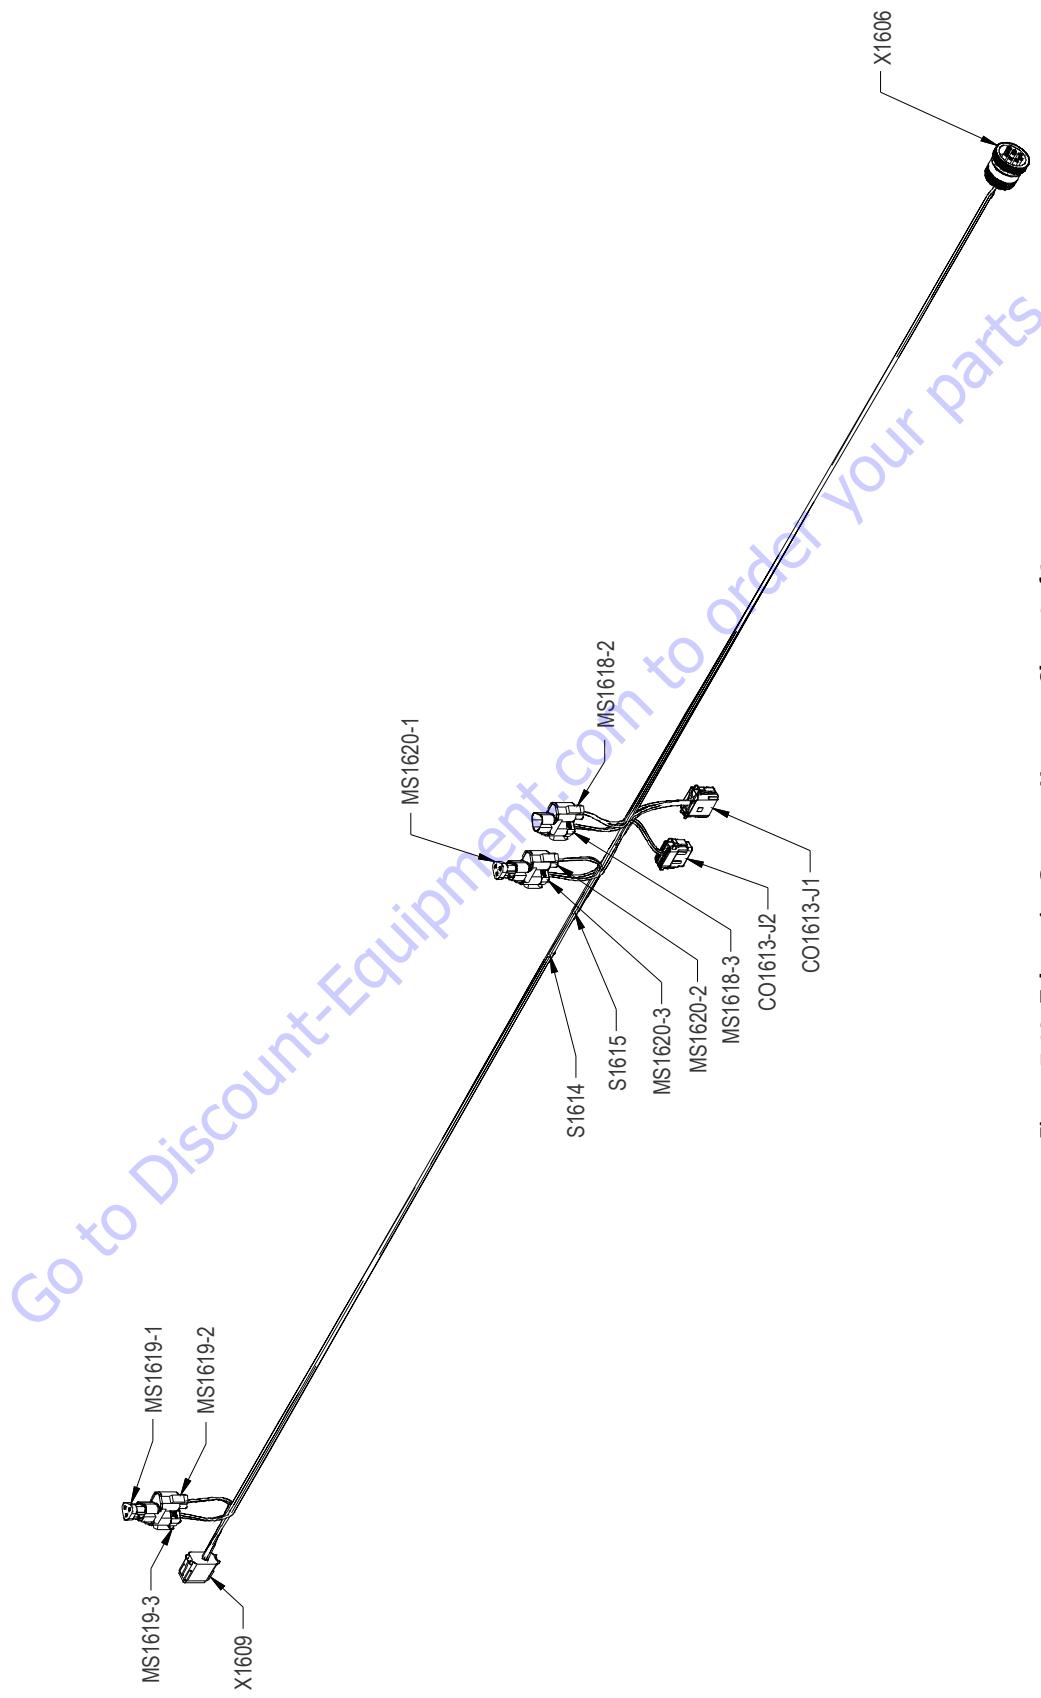

JLG LABEL	DESCRIPTION	UNIT
Engine Speed	Actual engine speed.	RPM
DEF Tank Level (If Equipped)	Indicates the level of DEF (diesel exhaust fluid) within the DEF tank if the machine is equipped with DEF tank. <ul style="list-style-type: none"><li>• 0% = Empty</li><li>• 100% = Full</li></ul>	Percentage (%)
JLG Machine Faults: Active / Not-Active	<ul style="list-style-type: none"><li>• 00 - No Machine Faults</li><li>• 01 - Active Machine Fault</li><li>• 10 - Error</li><li>• 11 - Not available</li></ul>	Bit
Total Idle Fuel Used	Total amount of fuel used during vehicle operation during idle conditions.	Liters
Total Idle Hours	Total time of engine operation during idle conditions.	Seconds
Total Engine Hours	Total time of engine operation.	Seconds
Total Fuel Used	Total amount of fuel used during vehicle operation.	Liters
Fuel Rate	Amount of fuel consumed by engine per unit of time.	Liters/Hour
Fuel Level	Ratio of fuel volume to the total volume of the fuel storage container. When a low fuel limit switch is present, the fuel level will indicate "full" until the switch opens, which will then indicate 10% fuel remaining.  When Fuel Level 2 (SPN 38) is not used, Fuel Level 1 represents the total fuel in all fuel storage containers. When Fuel Level 2 is used, Fuel Level 1 represents the fuel level in the primary or left side fuel storage container.	Percentage (%)
DM1 Engine Faults	Shows actual engine fault codes.	N/A

### Telematics-Ready (TCU) Plug

The telematics-ready (TCU) plug is a standard 12-pin Deutsch connector. Pin-out locations are shown below:

**Figure 7-18. Telematics Gateway Harness - Sheet 1 of 3**

## 7.8 WIRING HARNESS CONNECTOR LABELS AND WIRING HARNESES

### Connector Labels

Connectors between harnesses are identified by the prefix "X" and a sequentially assigned number. An optional suffix (letters & numbers) may be added when multiple terminations occur at one device or when there are optional connections.

#### Examples:

X25 connects to X25 in another harness.

X65A, X65B connect to different portions of one device

X163 connects to X163A in ANSI and X163B in CE machines

### Component Labels

Every component on the vehicle has a unique identification. A standard prefix letter is assigned according to the table below, followed by a unique sequential number. An optional suffix (letters & numbers) may be added when multiple terminations occur at one device.

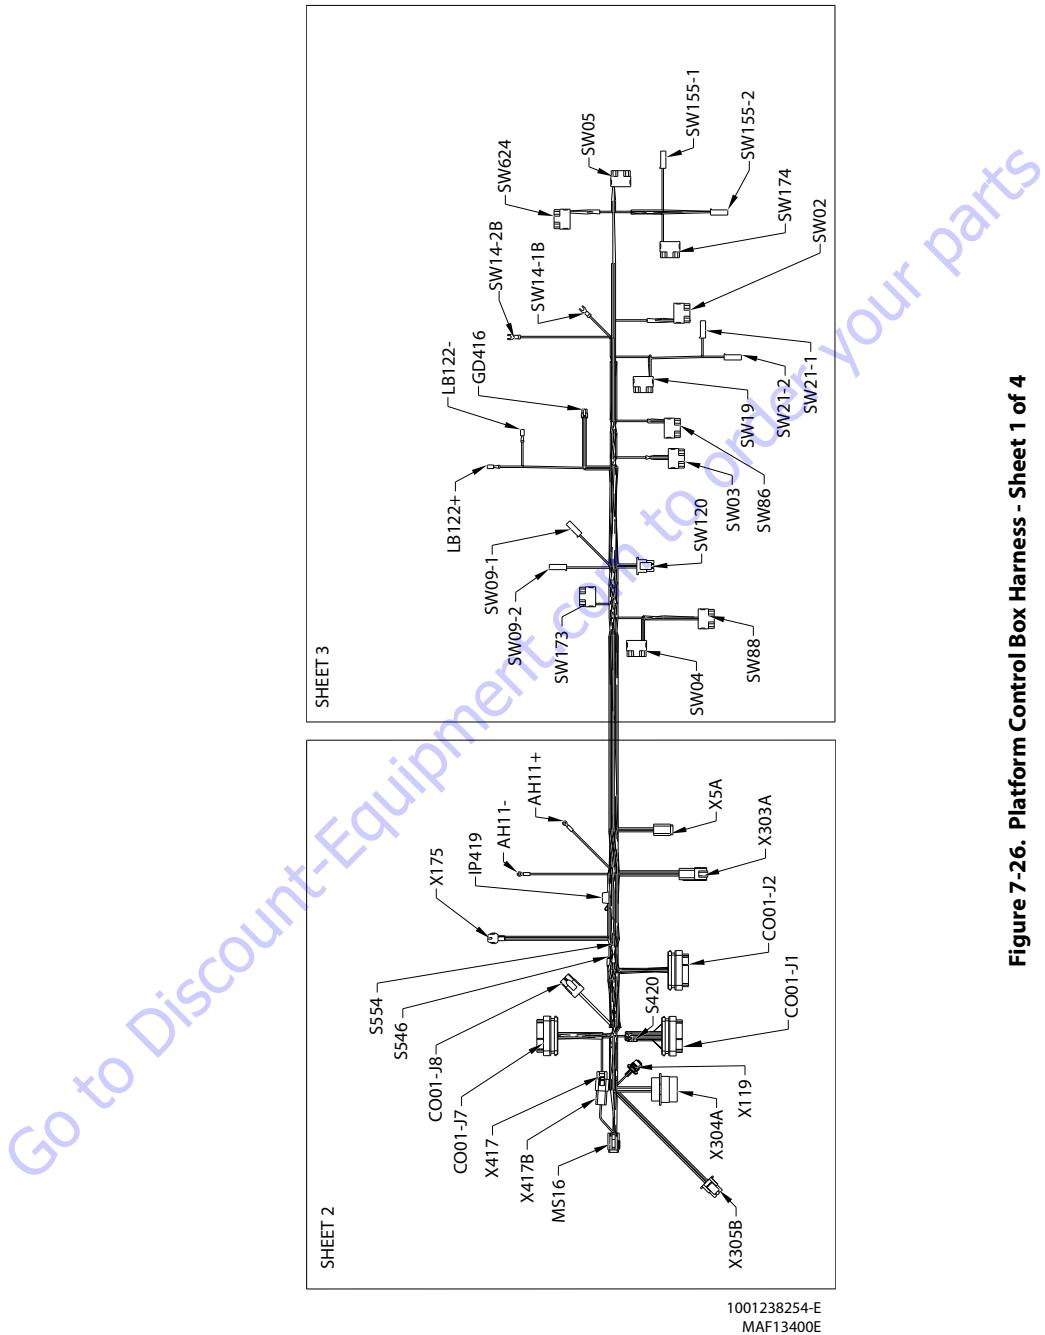

Terminals that are not loaded into connectors are considered independent components and labeled in the same fashion.

**Table 7-1. Wiring Harness Connector Labels**
