5700

ALL DAY BATTERY RIDE-ON SCRAPER

- ☐ This battery powered emissions free scraper operates for 8 - 12 hours on a single charge. National's innovative technology incorporates a series of AGM (Absorbed Glass Matt) batteries that charge using an on board charging system powered by 115 volts. This technology provides contractors with 100 % power, speed and torque for 90% of the batteries run cycle.
- ☐ Different from scrapers that are powered using a hydrostat drive system, National's 5700 benefits from both the speed and power of a hydraulic drive. This hydraulic design provides the scraper with consistent and continuous torque resulting in more productivity and higher removal rates.
- ☐ The adjustable slide plate affords maximum versatility in blade settings. Operating in conjunction with the adjustable slide plate, the swivel head action of the blade holder assures the scraper continuous blade contact with the floor.
- ☐ At an empty weight of less than 2100 lb., the compact design enables this scraper to fit through standard door frames and most residential and commercial elevators. The ergonomic design is comprised of moveable foot pegs and an adjustable slide plate; this corrects the operator's seat position to provide optimal comfort and line of sight.
- ☐ The precise hydraulic steering system enables tight maneuvering and a zero turn radius.
- ☐ For safety, the scraper is equipped with an automatic kill switch. It will not function without a person in the operator seat.
- ☐ The industry's largest selection of scraper blades, including our patented line, is always in stock and available. These blades are constructed and gaged at a specific Rockwell hardness, ensuring maximum production rates and longevity. National's patented carbide blades are engineered for the toughest ceramic and hardwood removal applications.
- ☐ The machine is accompanied with a start-up package including front travel wheels assorted flat & self-scoring scraper blades and National's patented carbide angle shank.
- ☐ The machine is equipped with easily accessible fork lift slots and non-marking tires.
- ☐ There is a one (1) year manufacturer's warranty on parts and labor.
- ☐ Patent No. 6,813,834 – 7,562,412 – 7,082,686
