www.discount-equipment.com

HOKUETSU INDUSTRIES CO., LTD.

Discount-Equipment.com is your online resource for commercial and industrial quality parts and equipment sales.

Locations:

Florida (West Palm Beach): 561-964-4949

Outside Florida TOLL FREE: 877-690-3101

Need parts? Check out our website at <u>www.discount-equipment.com</u>

#### Can't find what you need?

Click on this link: <u>http://www.discount-equipment.com/category/5443-parts/</u> and fill out the request form.

Please have the machine model and serial number available in order to help us get you the correct parts. One of our experienced staff members will get back to you with a quote for the right part that your machine needs.

We sell worldwide for the brands: Genie, Terex, JLG, MultiQuip, Mayco, Toro/Stone, Diamond Products, Magnum, Airman, Mustang, Power Blanket, Nifty Lift, Atlas Copco, Chicago Pneumatic, Allmand Brothers, Essick, Miller Spreader, Skyjack, Lull, Skytrak, Tsurumi, Husquvarna/Target, Whiteman-Concrete/Mortar, Stow-Concrete/Mortar, Baldor, Wacker, Sakai, Snorkel, Upright, Mi-T-M, Sullair, Neal, Basic, Dynapac, MBW, Weber, Bartell, Bennar Newman, Haulotte, Ditch Runner, Blaw-Knox, Himoinsa, Best, Buddy, Crown, Edco, Wyco, Bomag, Laymor, Terremite, Barreto, EZ Trench, Takeuchi, Basic, Bil-Jax, Curtis, Gehl, Heli, Honda, ICS/PowerGrit, Puckett, Waldon, ASV, IHI, Partner, Imer, Clipper, MMD, Koshin, Rice, Gorman Rupp, CH&E, Cat Pumps, Comet, General Pump, Giant, AMida, Coleman, NAC, Gradall, Square Shooter, Kent, Stanley, Tamco, Toku, Hatz, Kohler, Robin, Wisconsin, Northrock, Oztec, Toker TK, Rol-Air, Small Line, Wanco, Yanmar

**561-964-4949** Pa

This service manual explains about the cautions for maintenance jobs and is to serve a guide for the electric system, and troubleshooting for service personnel.

In this book the fundamental matters and other things already mentioned in the "Instruction Manual" and the "Parts Catalog" are omitted to avoid duplication. Therefore, for the operation and handling of this unit, we request you to refer to the instruction manual and caution plates, and further for the structure and components of the unit, please refer to the "Parts Catalog" separately to be supplied with the unit. If you should find any description which does not coincide with the instruction manual and parts catalog, we request you to make sure to start the job after clarifying it.

Service personnel is required to safely take quick and proper countermeasures as well as to use correct technology of maintenance in case of field services and periodical maintenance. It is important that service personnel should have proper and sufficient knowledge about the structure and function of the unit and should be well familiar with such technique mentioned in them.

Regarding the part numbers mentioned in this manual, we request you to refer to the Parts catalog separately supplied together with the unit, because the parts numbers in this manual are sometimes changed.

Copies of this service manual are intended to be distributed to limited numbers of our customers. The unauthorized reproduction or distribution of this service manual is prohibited.

1210

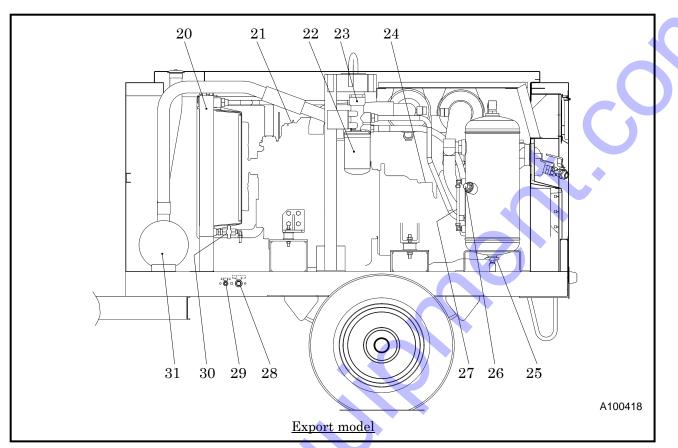

# 1.4 Internal Components and Part Names

NI.	Description	<b>E</b> vertier
No.	Description	Function
1	Oil separator	For separating oil mist mixed in compressed air.
2	Pressure control valve	For keeping the receiver tank pressure higher than 58psi (0.4MPa) [4bar] in the tank.
3	Safety valve	For releasing compressed air to the atmosphere when the pressure rises higher than the rated pressure.
4	Air filter (For compressor air-end)	For filtering the dust floating in the intake air.
5	Speed regulator	For regulating engine revolution speed.
6	Air filter (For engine)	For filtering the dust floating in the intake air.
7	Air bleeding electromagnetic pump	For automatically bleeding air from fuel pipes.
8	Fuel filter	For filtering dust and foreign matter mixed or to be mixed in the fuel oil.
9	Fuel tank	For storing diesel fuel oil.
10	Engine oil filler port	For supplying and replenishing engine oil to engine.
11	Fuel pre filter	For filtering dust and foreign matter mixed or to be mixed in the fuel oil.
12	Reserve tank	For checking engine cooling water level and for replenishing cooling water.
13	Radiator	For cooling the coolant for engine because it is water-cooled.
14	Sedimenter	For separating water mixed or to be mixed in the fuel oil.
15	Engine oil filter	For filtering engine oil.
16	Engine oil level gauge	For checking engine oil level.
17	Fuel tank drain valve	For draining condensate accumulated in fuel tank.
18	Pressure regulator	For regulating intake air volume.
19	Battery	For electrically starting engine.

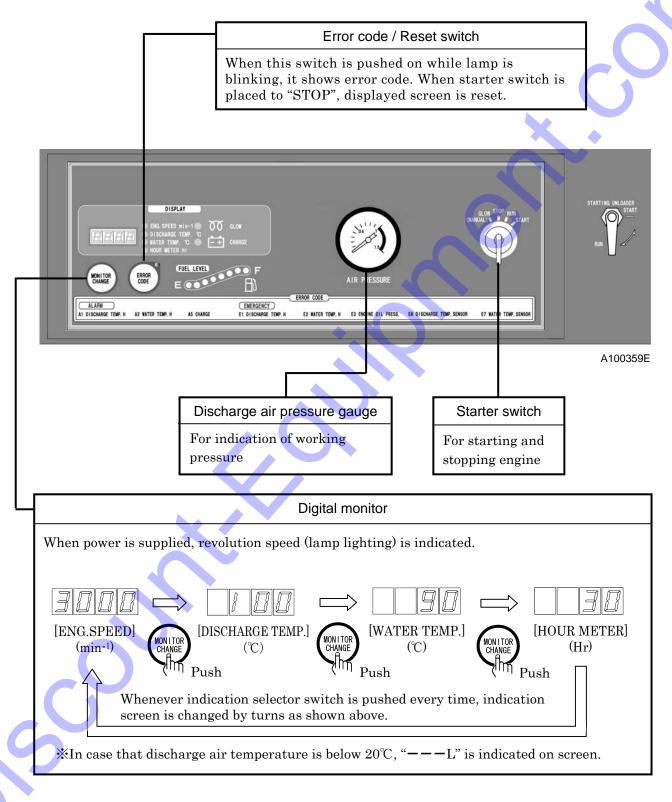

No.	Description	Function
INO.	Description	
20	Oil cooler	For cooling compressor oil circulating in the system.
21	Engine	For driving the compressor.
22	Compressor oil filter	For filtering compressor oil circulating in the system.
23	By-pass valve	For keeping compressor oil at proper temperature.
24	Air-end	For compressing intake air.
25	Separator receiver tank drain valve	From this portion where condensate is drained out of separator-receiver tank.
26	Compressor oil filler port	For supplying and replenishing compressor oil.
27	Compressor oil level gauge	Scale for measuring compressor oil level.
28	Engine oil drain valve	For draining engine oil for replacement of it and for maintenance.
29	Coolant drain valve	For draining condensate from engine.
30	Oil cooler drain valve	For draining compressor oil out of oil cooler and oil lines.
31	Exhaust muffler	Equipment which muffles an engine exhaust sound.

#### 1.5.1 Indicator lamp

Item	Contents	Measures	Monitor
GLOW	Press starter switch "GLOW" and the lamp goes on and after preheating is finished, the lamp will be off.		00
CHARGE	Lamp goes on when alternator is not charging.	Check wiring. Check alternator.	

**[Warning display]** This displays such trouble of less importance when it occurs during operation, but the unit continues operating.

When any abnormality happens, a trouble code lamp flickers. In this time when trouble code switch is pressed, a failure code will be displayed.

Item	Failure code	Contents	Measures
DISCHARGE TEMP. H	A1	Lamp flickers when the air temperature at the outlet of the air-end reaches 239°F (115°C).	
WATER TEMP. H	A2	Lamp flickers when coolant temperature reaches 221°F (105°C).	See "Troubleshooting"
CHARGE	A5	Belt loosened and/or cut Faulty generation of alternator	

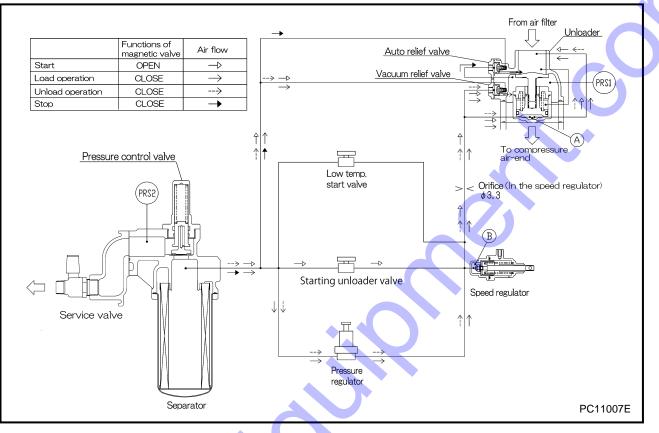

**[Emergency display]** When any trouble takes place during operation, this displays and it stops as an emergency stop.

When any abnormality happens, a trouble code lamp flickers. In this time when trouble code switch is pressed, a failure code will be displayed.

Item	Failure code	Contents	Measures
DISCHARGE TEMP. H	E1	Lamp displays when the air temperature at the outlet of the air-end reaches 248°F (120°C).	
WATER TEMP. H	E2	Lamp displays when coolant temperature reaches $230^{\circ}$ F ( $110^{\circ}$ C).	
ENG. OIL PRESS.	E3	Lamp goes on when engine oil pressure drops. The function pressure is below 7.3psi(0.05MPa)[0.5bar].	See "Troubleshooting"
DISCHARGE TEMP.SENSOR	E6	It is displayed when air temperature sensor at the outlet port of compressor air end is disconnected.	
WATER TEMP.SENSOR	${ m E7}$	It is displayed when engine coolant temperature sensor is disconnected.	

# **1.6 Capacity Control Device**

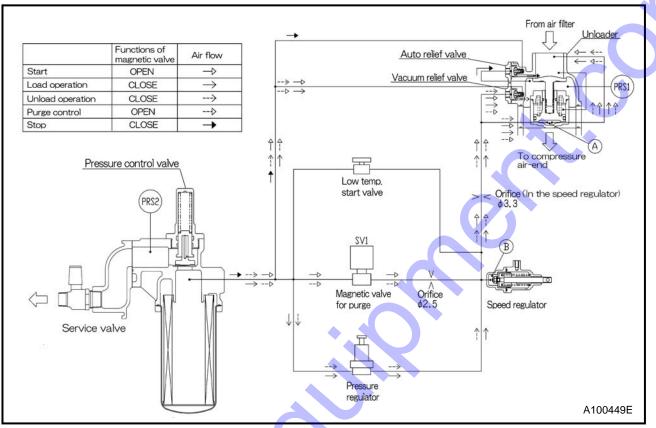

### (1) Export model

Step	Response
Start	When starting operation, starting unloader valve opens. And compressed air is sent to unloader chamber $\textcircled{A}$ and speed regulator chamber $\textcircled{B}$ . Thus pressure in chamber $\textcircled{A}$ and $\textcircled{B}$ rises smoothly and closes unloader valve completely at low pressure. And at the same time, engine speed drops by function of speed regulator. Consequently, load at start-up will be saved.
Load operation	Air volume sent to unloader chamber $\textcircled{A}$ and speed regulator chamber $\textcircled{B}$ increases and decrease according to increase and decrease of delivery air pressure. Thus according as unloader valve position and engine speed change, free air delivery is sleeplessly and automatically regulated from 0 to 100%.
Suction port closing unload operation	When air consumption decreases and compressed air in separator receiver tank exceeds rated pressure, it closes unloader valve by function of pressure regulator and speed regulator and reduces engine speed down to unloaded speed. Further, when interior of compressor air-end becomes extremely high vacuum during unloaded operation, it causes vacuum noise. In order to prevent vacuum noise which occurs in compressor air-end, it detects secondary pressure in pressure regulator to open vacuum relief valve, thus preventing interior of air-end from becoming high vacuum.
Stop	When stopping operation, it opens auto relief valve to relieve the compressed air in separator receiver tank to atmosphere, detecting the pressure inside compressor air-end.

(2) US model

Ś

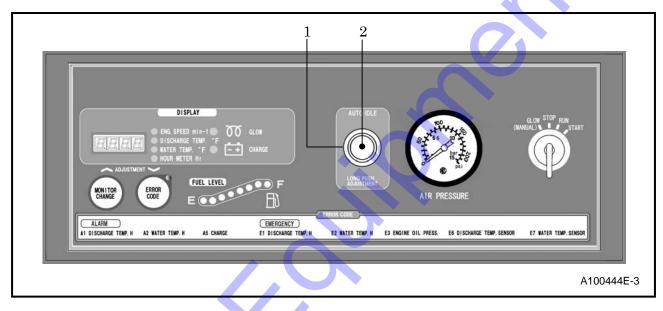

Step	Response
Start	When starting operation, solenoid valve (SV1) opens. And compressed air is sent to unloader chamber $\textcircled{A}$ and speed regulator chamber $\textcircled{B}$ . Accordingly, the pressure in the chamber $\textcircled{A}$ and $\textcircled{B}$ rises soon to fully close unloader valve at low pressure. And then engine speed drops with the function of speed regulator and it starts automatically starting unloader operation. Thus it can reduce the load at start-up.
Load operation	After starting operation, SV1 valve closes after 10 seconds have passed. The air volume sent to the chambers (A) and (B) from pressure regulator increases or decreases according to the rise and drop of discharge air pressure. Thus according as unloader valve position and engine speed change free air delivery is steplessly and automatically regulated from 0 to 100%.
Suction port closing unload operation	When air consumption decreases and compressed air in separator receiver tank exceeds rated pressure, it closes unloader valve by function of pressure regulator and speed regulator and reduces engine speed down to unloaded speed. Further, when interior of compressor air-end becomes extremely high vacuum during unloaded operation, it causes vacuum noise. In order to prevent vacuum noise which occurs in compressor air-end, it detects secondary pressure in pressure regulator to open vacuum relief valve, thus preventing interior of air-end from becoming high vacuum.
Purge control At unload operation	When the certain set time (it can be changed.) has passed at lower pressure than the set negative pressure, detecting the negative pressure inside the compressor air end with an intake negative pressure sensor (PRS1), solenoi valve (SV1) opens and it closes unloader valve. At the same time, it function to relieve the compressed air from separator receiver tank to the atmospher and thus it lowers the pressure. Thus the compressor power is saved. When air consumption increases, and the pressure used for load drops below the s pressure, services pressure sensor (PRS2) detects it and it disengages the purge control (solenoid valve SV1 closes) to start full load operation.
Stop	When stopping operation, it opens auto relief valve to relieve the compresse air in separator receiver tank to atmosphere, detecting the pressure inside compressor air-end.

#### 1.6.1 AUTO IDLE control (Purge control)

This model is equipped with auto idle control operation mode. This operation mode is recommendable for such use: not so much air consumption is required and it is used continuously and also power consumption under unloaded operation is required to be saved. Use this mode, depending upon the need and demand. For the selection of this mode, switch on "AUTO IDLE" on the operation panel. Select this operation mode freely, according to required air consumption.

#### <Procedure>

- 1 During operation, push on auto idle switch "1" .
- 2 Then the indicator lamp auto idle "2" goes on.
- ③ In order to stop this operation mode, push again auto idle switch "1" goes out to disengage this purge control.

#### Function of auto idle control (Purge control)

Function	Conditions of auto idle lamp
① First engine speed drops to the minimum speed by pressure regulator, owing to reduction of air consumption. Later the air consumption is reduced further, the unloader valve gradually closes and intake negative pressure increases. In this stage, the pressure sensor detects the intake negative pressure. Then when the intake negative pressure becomes higher than the set pressure, the "AUTO IDLE" lamp flickers at short intervals.	Lamp flickers at short intervals.
② When this condition continues for a certain time, the solenoid valve functions to start purge mode operation. Consequently, the pressure inside separator receiver tank drops and reduces the power of compressor air end. In this stage, the lamp "AUTO IDLE" flickers at longer intervals.	Lamp flickers at longer intervals.
③ Next, when the pressure for load down to the purge releasing pressure owing to the increase of air consumption, the solenoid valve operation gets "OFF" and it is transferred to normal operation. In this stage, the lamp "AUTO IDLE" goes on.	Lamp goes on.

#### 1.6.2 Setting of "AUTO IDLE" control (purge control) pressure/timer

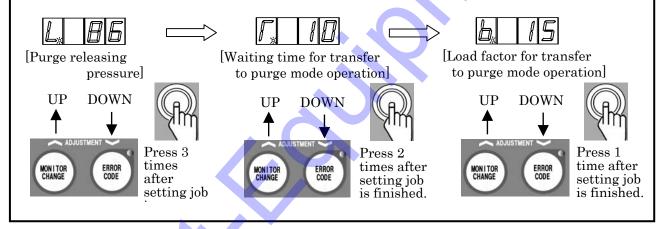

• How to change set value of auto idle pressure/ timer is shown be	elow.
--	-------

No.	Item	Indication	Unit	Primary set value	Range of set values
1	Purge releasing pressure	D	PSI	86	70 to 100
1	r urge releasing pressure	L	kPa	60	50 to 70
2	Waiting time for transfer to purge mode operation	ſ	sec	10	5 to 60
3	Load factor for transfer to purge mode operation	Ь	%	15	5 to 30

<Procedures of adjustment>

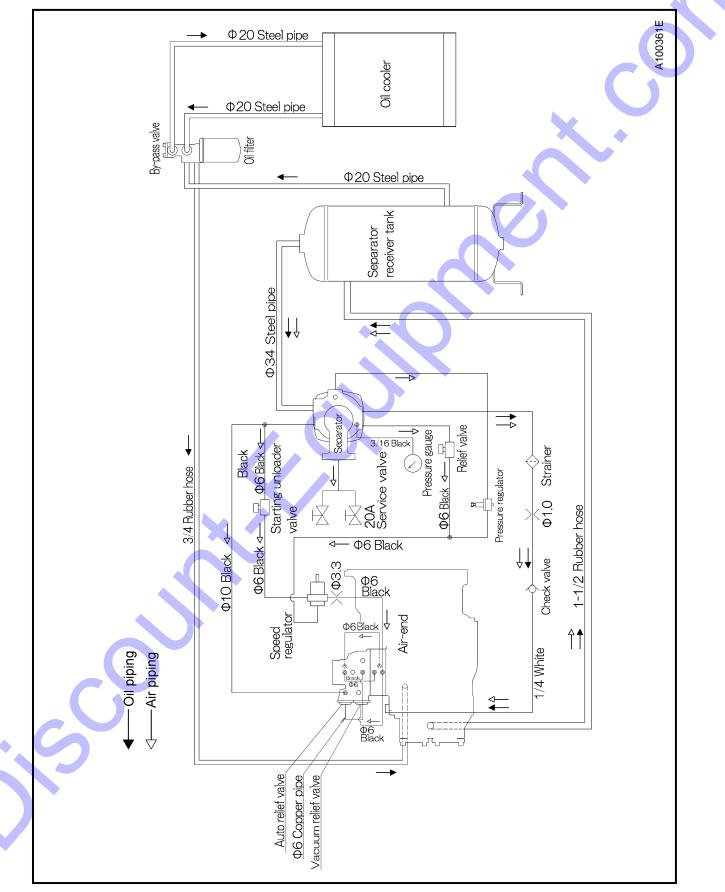

When auto-idle switch is pressed longer (than 5 second), first L.(Purge releasing pressure) is displayed.

Each time auto-idle switch is pressed, each indication will be selected. Then each time it is pressed one time, T.(Waiting time for transfer to purge mode operation) is switched to b.(Load factor for transfer to purge mode operation),according to the set orders.

#### 2.1 Cautions for Overhauling

#### 2.1.1 Precautions before starting work

#### (1) Work to be performed

It is very important to always plan in advance what facilities, tools, instruments, materials, oil, etc. you will need to use; the exact locations and methods of performing inspection, adjustment, or disassembly; and the key points of any repair work to be performed.

#### (2) Care not to spill oil

Use a pan to collect used compressor oil, engine oil when changing the oil or attaching or detaching an oil line. If a large volume of oil is expected to flow out make, sure to drain any accumulated oil from the reserve tank, engine oil pan in advance.

[Follow the designated regulations to dispose of compressor oil and engine oil.]

#### (3) Care when detaching parts

When disassembling a complicated part, put a matching mark to indicate the position of detached parts for future reference. Make sure that the negative cable is detached from the battery terminals before starting repair work.

#### (4) Tools to be prepared

①Measuring instruments (e. g. tester, insulation resistance gauge etc.)

2 Tools

③Torque wrenches

(4) Jigs and specialized tools

#### <sup>5</sup>Sealing tape

<sup>(6)</sup>Molybdenum sulfide (tube type)

O Lithium extreme pressure type grease

CALTEX MULTIFAK EP1
MULTINOC SDX
®Diesel oil
@Compressor oil

#### (1) Cleaning cloths

(1) Literatures (such as manuals etc.)

#### 2.1.2 Disassembly and assembly

- (1) Before removing nylon tubes, hydraulic/fuel hoses, it is necessary to clean the inside of machine to prevent from entrance of dirt and foreign matters.
- (2) Perform disassembly work in a dust-free location whenever possible.
- (3) When disassembling parts, wash their outer surfaces and place them on a clean sheet of paper or cloth, taking care not to contaminate or damage them.
- (4) Wash disassembled parts with diesel oil (cleaning solvent) after checking for contamination or discoloration. However, do not wash rubber parts with diesel oil.
- (5) Be careful not to damage disassembled parts, they are precision built.
- (6) Replace consumables such as oil seals, O-rings, filters, oil, etc. with new items when reassembling parts.
- (7) Apply "CALTEX MULTIFAK EP1" to O-ring surface and "MULTINOC SDX" to sliding portion of oil seal.
- (8) When reassembling parts, place each part in the order of assembly and take care that no parts are missing or misassembled.
- (9) When reassembling an assembled part (set part), be sure to replace it as an assembly.
- (10) Contamination or rusting may occur due to dust or humidity if parts are left in disassembled or partly disassembled condition for a long time. Therefore, be careful to prevent dust or rust from affecting parts if you have to leave the repair incomplete for a long period of time.
- (11) Check tightening torque and clearance when assembling parts.
- (12) Check the direction of rotation, speed, and oil leakage after assembly.
- (13) Before starting the machine after disassembly, run it at low idle to check for unusual noises, etc. to prevent engine or generator damage.

# 2.2 Tightening torque

#### 2.2.1 General bolts and nuts tightening torque

Fasten all the bolts and nuts with the specified tightening torque when assembling.

# IMPORTANT

- The above torque values in the table shall be applicable for the bolts and nuts used for machine
- Generally, the abovementioned tightening torques should be followed, but in some points different torque is specified. So use the tightening torque without fail. (See following pages.)
- Make sure to remove rust and dust before tightening.

#### 2.2.2 Tightening torque of such important quality parts as bolts and nuts

 \*\*1
 For larger than M20, tightening torque becomes so big, and so 4.8 or equivalent shall be used.

 \*\*2
 When fixing parts of aluminum are used, lockwasher shall be used for avoiding damage.

 \*\*3
 Nut shall be of S45C ( equivalent to 8.8 of strength classification ).

#### 6 Undercarriage

# 2.3 How to adjust regulator and how to replace diaphragm

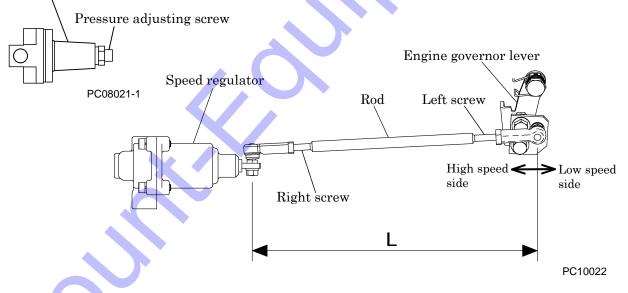

#### 2.3.1 Method of adjustment

- The speed regulator is already adjusted prior to delivery ex.works. Never change the setting of the regulator by turning bolt and rod recklessly.
- If it is necessary to re-adjust the speed regulator due to overhauling or any trouble, adjust it in accordance with the following procedures.

<Adjustment procedure> (For engine speed and pressure, see 1.2)

Pressure regulator

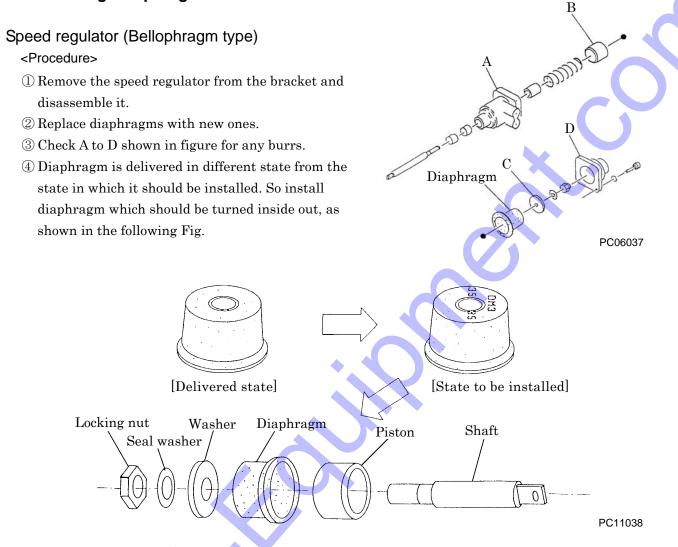

① Adjust the length of the rod connecting speed regulator so that engine governor lever can be pulled toward high speed side, with compressor kept stopping.

(Making the rod length short, engine speed increases.)

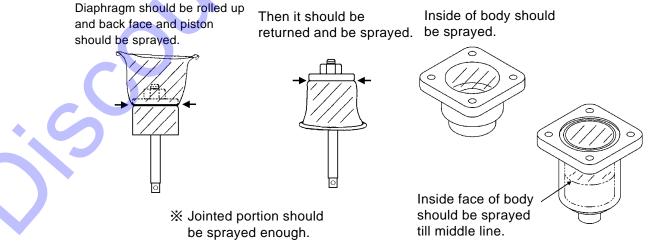

② Adjust this system so that when unload starting pressure exceeds 100psi(0.69MPa)[6.9bar] by turning pressure adjusting screw, speed regulator can start to function to lower engine RPM. (Tightening the screw, the pressure rises, and loosening it, the pressure drops.)

#### 2.3.2 Change diaphragm

(5) Internal face of body and cap and also both internal face and external face of diaphragm should be coated with molybdenum sulfide spray.

How to spray molybdenum sulfide paste : The areas in oblique line should be sprayed with this paste.

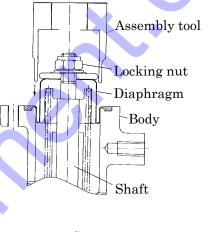

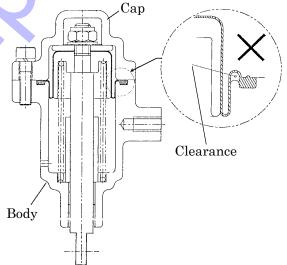

PC11037-1

<sup>©</sup>Install diaphragm to shaft and piston and fasten it with a locking nut.

Tightening torque : 70.8bf · in.(8N · m)[80kgf · cm]

- Important : Be careful not to tighten the locking nut excessively. Excessive tightening can cause washer to turn together and twisting diaphragm. The diaphragm will be damaged in shorter period.
- ⑦Put in diaphragm to be settled equally in the body using an assembly tool.
  - Important : Once diaphragm is settled in, turn slowly the tool for secure installation. When turning the tool, hold the diaphragm not to be afloat.
- ③After diaphragm is set in, install the cap and then assemble speed regulator.
  - Important : Before installing the cap, make sure again that the portion of diaphragm shown in right figure is seated intact. If diaphragm is afloat, it can cause diaphragm to be caught in when installing cap. If the shaft is turned after installation is finished, it could damage diaphragm. Take care.
- ③After re-assembling the speed regulator, adjust it according to the adjustment method of speed regulator (See 2.3.1)

## 2.4 Clean of element in sedimenter

#### <Procedure>

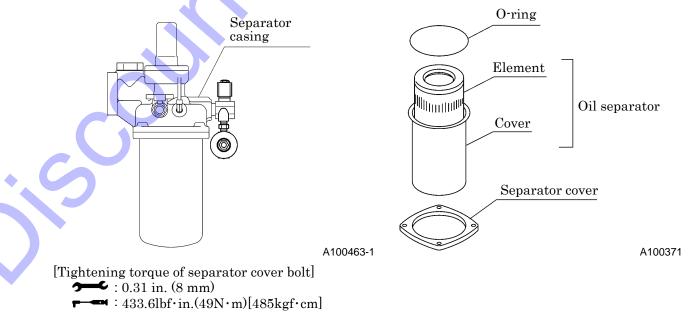

- 1 Turn fuel selector value "1" to "OFF" position.
- ② Loosen the drain valve "2" and drain out condensed water inside.
- ③ Turn the cup "3" to the left and remove it.
   Be careful to remove the cup "3" because it is filled with fuel. Wipe out split fuel completely.
- ④ Remove float "4" inside cup "3"
- <sup>(5)</sup> Washing element "5" and the cup inside with new fuel.
- 6 Replace element "5" and O ring "6", "7" if they are found broken or damaged.
- O After finishing clean, assemble it in reverse procedure.
- If air is found still in fuel pipe, place starter switch to "RUN" position and loosen air bleeding bolt "8" to bleed air. After finishing air bleeding, tighten the air bleeding bolt "8".
- Drain the condensate in container "9", and then dispose of condensate according to the designated regulations.

A100117

### 2.5 Change Oil Separator

#### IMPORTAN

- When changing the oil separator, both cover and element must be replaced with new ones.
- Even before the periodic interval time of replacement, replace the oil separator whenever the oil consumption increases and also oil is found mixed in the discharge air.
- When consumption of the oil is still unusual even after cleaning strainer in the scavenging orifice, change the oil separator with a new one.

# 2.6 Change O-Ring of Unloader

<Caution during O-ring replacement>

Supply grease to O-ring "1" · "2" · "3" · "4" after replacement.

IMPORTANT	•

 When reassembling, apply sufficient grease to O-ring Slot/O-ring and sliding surface.

Use CALTEX MULTIFAK EP1 grease or equivalent. Grease of poor quality will deteriorate the material.

A070337

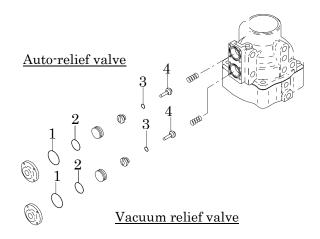

3

1

# 2.7 Check O-ring and Needle valve of Auto-relief valve and Vacuum relief valve

### IMPORTANT

- When reassembling, apply sufficient grease to O-ring Slot/O-ring and sliding surface.
   Use CALTEX MULTIFAK EP1 grease or equivalent. Grease of poor quality will deteriorate the material.
- Disassemble and clean the component, and check O-ring "1", "2", "3" and needle valve "4". Then, replace O-ring "1", "2", "3" and rubber on the needle valve "4", if hardened.

A070339

# 2.8 Performance check of Pressure control valve

# IMPORTANT

When reassembling, apply sufficient grease to O-ring Slot/O-ring and sliding surface.
 Use CALTEX MULTIFAK EP1 grease or equivalent. Grease of poor quality will deteriorate the material.

#### <Procedure>

- ① When closing stop valve and fully opening service valve while the machine is running, make sure that the discharge pressure gauge shows the figure between 49 to 68psi(0.34 to 0.47MPa)[3.4 to 4.7bar].
- ② When the pressure is lower than 49psi(0.34MPa)[3.4bar], replace spring "3" with a new one.
- ③ When the indicator shows excessively higher pressure, you will find that the piston does not move smoothly due to foreign material and rust stuck inside valve. In such a case, disassemble the component for checking and cleaning.

A100372-1

3

4

# 2.9 Check Pressure control valve O-Ring and Piston

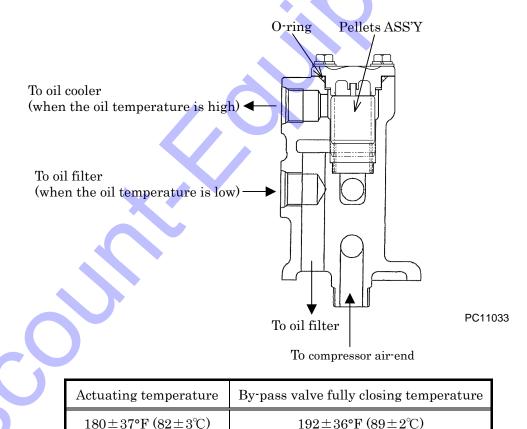

- After disassembling and cleaning pressure control valve, check O ring "1" "2" and piston "4". When the rubber of these parts is found hardened, or damaged, replace them.
- After replacement, run the machine to check its function, air-leak or any disorder.

## 2.10 Change of pellet assembly of by-pass valve

•By-pass valve fitted on this unit is of full bore type. While the unit is used for normal operation, it is not to perform periodical replacement of the Inner pellet assembly, but when such trouble as excessive rise of compressor oil temperature, it becomes necessary to replace it, in accordance with the following procedures.

#### <Procedure>

- ① First stop the unit and make sure that there is no residual pressure left in the separator receiver tank.
- ② After checking and confirming that the temperature of compressor oil has become amply low, open drain valves on separator receiver tank and oil cooler to empty compressor oil completely.
- ③ After having drained oil completely, remove the pellet assembly of by-pass valve and O-ring.
- ④ Replace the pellet assembly and O-ring by new ones. Install O-ring coated thinly with compressor oil.
- ⑤ Supply compressor oil through the filler port provided on the receiver tank. (Refer to operation manual.)
- ⑥ Start operation and check the function of by-pass valve.(It functions well when delivery air temperature will not rise abnormally.)

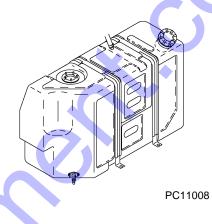

# 2.11 Clean inside of Fuel Tank

• Condensate is caused and accumulated at the bottom of fuel tank, owing to churning of dust or dirt mixed when fuel oil is fed and water drop caused while fuel oil tank is used for a long time. When any condensate is found afloat and fuel filter gets clogged too fast, fuel oil tank should be cleaned after condensate is removed from fuel oil tank even before the specified cleaning interval time.

#### <Procedure>

- 1 Open drain valve to remove fuel oil from fuel tank.
- O Remove side cover under door.
- ③ Remove fuel pipes and wires connected to fuel tank.
- ④ Remove belt holding fuel tank and remove tank.
- <sup>(5)</sup> Insert cleansing nozzle through fuel filler port or drain port for cleaning tank.
- <sup>(6)</sup> After cleaning job is finished, install fuel tank from which water or the like should be completely removed.

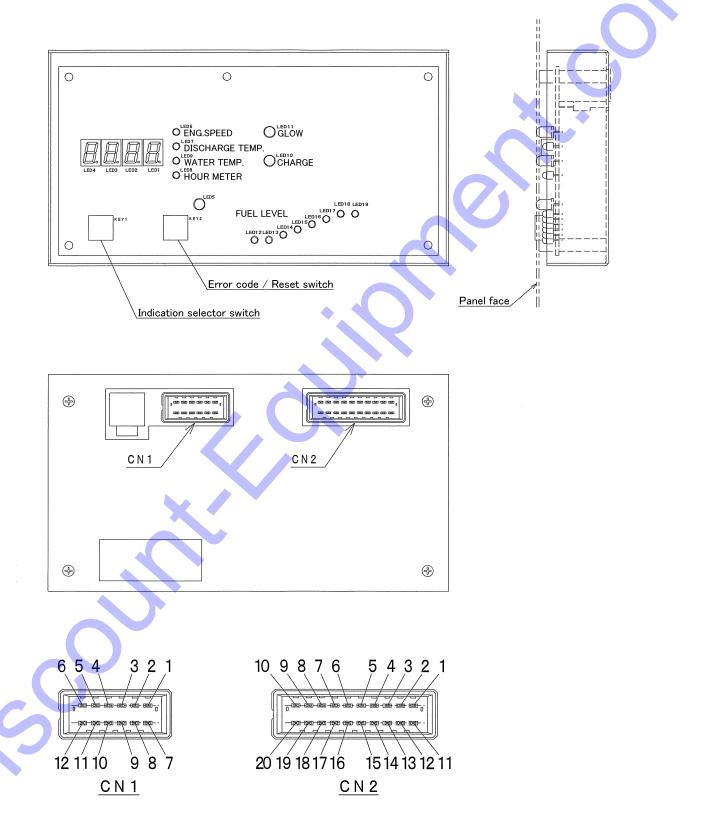

# 2.12 Values of Various Adjustments of Engine

]	tem	Unit	PDS185S-6C2					
Engine model			Y	ANMAR 4TNV88-BDHKS				
		lbf∙in.	First time	364.6 to 416.6(41.2 to 47.1)[420 to 480]				
Tightening to	rque of head bolts	(N∙m) [kgf∙cm]	Second time	755.2 to 807.2(85.3 to 91.2)[870 to 930]				
Valve	Air intake	in.(mm)	$0.0079 \pm 0.020 \ (0.20 \pm 0.5)$ (when engine is cold)					
clearance Discharge		in.(mm)	$0.0079 \pm 0.020 \ (0.20 \pm 0.5)$ (when engine is cold)					
Firing order			1-3-4-2-1 (No.1 cylinder at flywheel side)					
Injection timi	ng (BTDC)	0	FIT 14.5 [at lift 0.098in. (2.5mm)]					
Nozzle injecti	on pressure	psi(MPa)[bar]	3,1	$.33 \pm 72.5(21.6 \pm 0.5)[216 \pm 5]$				
	Standard	psi(MPa)[bar]	$470 \!\pm\! 14.5 (3.24 \!\pm\! 0.1) [32.4 \!\pm\! 1]$					
			Limited value	$370 \pm 14.5(2.55 \pm 0.1)[25.5 \pm 1]$				
Compression	Working limit	psi(MPa)[bar]	Each cylinder limit value	29 to 43.5(0.2 to 0.3)[2 to 3]				
	Temperature for start of release	°F(°C)	$160 \pm 34.7 \ (71 \pm 1.5)$					
Thermostat	Full open temperature	°F(°C)	185 (85)					
	Valve lift	in.(mm)	More than 0.31 (8.0)					

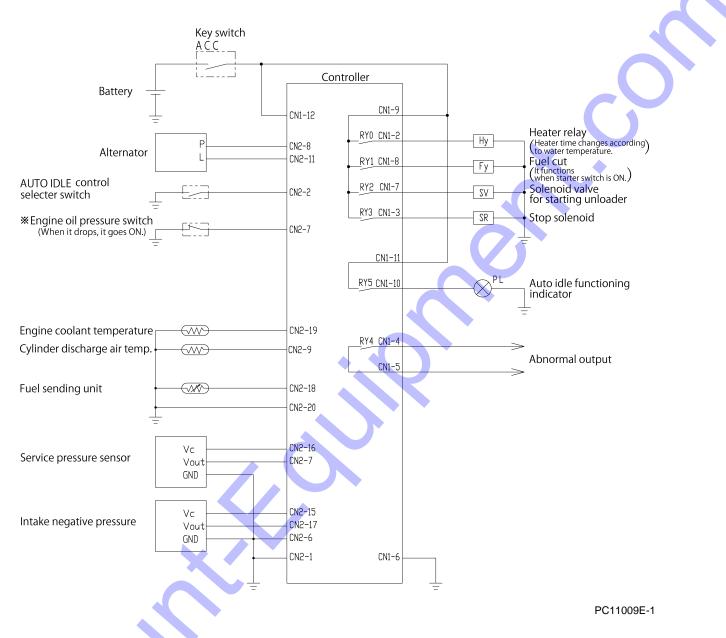

\*For the details, see service manual supplied by engine manufacturer.

## 3.1 Control

Part number: 46870 51901 (Export model) Part number: 46870 54000 (US model)

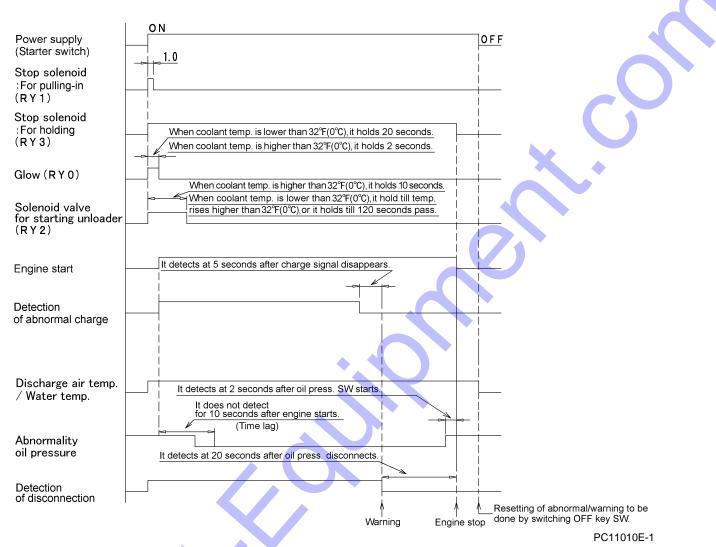

#### 1.Exterior connection drawing

\* : As engine oil pressure switch contact is B, the contact is ON when engine shuts down. After engine starts, the contact becomes OFF due to rise of engine oil pressure. Oil pressure detecting circuit of controller functions at circuit of contact A. After engine oil pressure switch is kept ON for 2 seconds, engine is brought to emergency stop. (Engine oil pressure abnormality detecting circuit functions 10 seconds after it detects alternator generation signal.)

#### 2. Timing of each output relay

#### 3. Warning • emergency display and emergency stop functions

	Item	Indicator	Sens	or	Actuation	Detecting timing	Time lag
ρΰ	Discharge temp. H	A-1	Thermister	_	Lamp goes on at 239°F(115℃)	Always	1.0 sec
Warning	Water temp. H	A-2	Thermister	_	Lamp goes on at 221°F(105℃)	Always	1.0 sec
Δ	Charge	A-5	_	_	Charge signal disappears and lamp goes on.	After starting engine	5.0 sec
	Discharge temp. H	E-1	Thermister	_	Lamp goes on at 248°F(120℃)	Always	1.0 sec
Λ	Water temp. H	E-2	Thermister	_	Lamp goes on at 230°F(110℃)	Always	1.0 sec
Emergency	Eng. oil press E-3 F	Pressure SW	A contact	Lamp goes on when oil pressure is lower than 7. 3psi (0. 05MPa) [0. 5bar]	10 seconds after engine starts	2.0 sec	
H	Discharge temp. sensor	E-6	Thermister	_	Disconnected and lamp goes on.	After starting engine	20.0 sec
	Water temp. sensor	E-7	Thermister	_	Disconnected and lamp goes on.	After starting engine	20.0 sec

• Emergency : Compressor continues to run.

• Warning : Compressor stops.

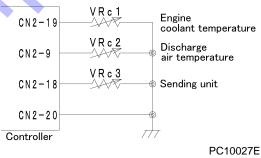

Mark	Name	Remark	
RY0	Relay for heater relay	It goes ON when starter SW is ON.	When coolant temp. is lower than 32°F(0°C), it becomes OFF 20 seconds later. When coolant temp. is higher than 32°F(0°C), it becomes OFF 2 seconds later.
RY1	Relay for solenoid relay	It goes ON for 1 second when starter SW is ON.	
RY2	Relay for starting unloader	It goes ON when starter SW is ON.	When coolant temp. is lower than $32^{\circ}F(0^{\circ}C)$ , or when 120 seconds pass, it becomes OFF. When coolant temp. is higher than $32^{\circ}F(0^{\circ}C)$ , it becomes OFF 10 seconds later.
RY3	Relay for solenoid	It goes ON when starter SW is ON.	
RY4	Abnormality output relay		
RY5	Purge function relay (US model only)	Blinking during purge function	When switching to purge operation ···Blinks every 0.5 seconds During purge operation ···Blinks every 1 second

#### 4. Functions of each output relay

#### 5.Adjustment and inspection

Perform the detection and inspection of discharge air temperature, engine coolant temperature, and setting unit by controller in the following steps.

 Connect resistance to controller as shown right. Or use multi-speed variable resistance (resistance value: 1.0kΩ) for VRc1, VRc2 and VRc3.

(2) Gradually lower resistance values of VRc1 and VRc2 and measure them when they reach abnormal values. Then check and confirm that they are within the following ranges.

Item		Set temperature		Resistance $(\Omega)$
Item	(°C)	(°F)	Resistance ( 22 )	
Engine coolant VRc1	Warning	105	221	$640\!\pm\!15$
Eligine coolant viter	Emergency	110	230	$560\!\pm\!15$
Discharge sin terrerenture VID-9	Warning	115	239	$491\!\pm\!15$
Discharge air temperature VRc2	Emergency	120	248	$432\!\pm\!15$

#### (3) Sending unit

Float position	Resistance ( $\Omega$ )
F	$3.0 \pm 2.0$
1/2	32.5
Е	$110.0 \pm 7.0$

#### 6.List of functions

(1)Connector CN1

\_6

1

Pin No.	Line color	Connection	Remark
1	R/W	CN1-12	Common
2	Y/R	Heater relay [A] terminal	When starter switch is "ON", and voltage is applied to CN1-12 terminal, interior contact (RYO) is "ON", and voltage is outputted out of CN1-2 terminal to make a heater relay function. 2 seconds later [when coolant temp. is lower than $32^{\circ}F(0^{\circ}C)$ , 20 seconds later] the interior contact (RYO) becomes "OFF" to cut power supply to heater relay and complete engine preheating.
3	W/B	Stop solenoid [R] terminal	For holding stop solenoid When starter switch is "ON", and voltage is applied to CN1-12 terminal, interior contact (RY3) is "ON", and voltage is outputted from CN1-3 terminal to supply power to R terminal for holding stop solenoid. When starter switch is "OFF" or emergency stop system functions, the interior contact (RY3) becomes "OFF" to cut power supply to the stop solenoid and consequently engine stops.
4	_	NIL	For outputting signal of abnormality
5	—	NIL	For outputting signal of abnormality
6	_	NIL	

	<del></del>	Π	When starter switch is "ON", and voltage is applied to
		1	CN1-12 terminal interior contact (RY2) between CN1-9
		1	and CN1-7 terminal becomes "ON" to supply power to
		1	solenoid for purge/starting unloader to open the valve. Thus this unit automatically starts starting unloader
		1 '	operation when it starts up, consequently saving load
		1	at start-up.
		1	When controller CN2-8 terminal receives input of
		1	alternator generation signal after engine starts, controller timer begins to function and 10 seconds later
		1	[ after whichever shorter time passes between the time
l i		1 '	till water temperature rises higher than $32^{\circ}$ F (0°C)
l i		1 '	when it is lower than $32^{\circ}F(0^{\circ}C)$ and the time of 120
l		1 '	seconds later ] the interior contact (RY2) becomes "OFF" to cut power supply to the purge/starting
l i		1 '	unloader operation and then switched to normal mode
l		1 '	operation from starting unloader mode.
l		1 '	•Functions during AUTO IDLE (purge control) operation
l I		1 '	When auto idle switch is switched on during operation, auto idle lamp goes on and switched to purge control
l			operation. When this switch is pressed on again, auto
7	Y/G	Purge/starting unloader solenoid valve	idle lamp goes out and this mode is released.
· ·	1/0	(US model only)	When air consumption decreases and pressure
l I			regulator begins to function, engine speed drops and at
l		1 '	the same time, unloader valve of compressor air-end gradually begins to close and suction load increases.
l		1 '	Compressor load factor is shown as monitor indication
l		1 '	(See 1.5(2)) based on the suction load which is detected
l		1 '	by suction load sensor. When the load factor becomes
l		1 🥏	lower than the specified value [(set value prior to delivery: 15% (See 1.6.2)], auto idle lamp blinks at
l			short intervals. When this situation continues for a
l I			certain time (set time prior to delivery: 10 seconds), the
l			interior contact in controller (RY2) becomes "ON" to
l I			make solenoid for purge function to start purge. Thus receiver tank pressure drops to save machine power. At
l			this time the auto idle lamp blinks at long intervals.
l I			Further, when air consumption increases and the
l			pressure at load becomes lower than the purge
l I			releasing pressure (set value prior to delivery: 86psi(0.59MPa)[5.9bar] to cut power supply to the
l			solenoid for purge/starting unloader mode and then
l I			switched to normal node operation. Auto idle lamp
<b> </b>			changes from blinking to lighting.
1			<b>For pulling stop solenoid</b> When starter switch is "ON", and voltage is applied to
l			CN1-12 terminal, interior contact (RY1) is "ON", and
l		1 🕽	voltage is outputted out of CN1-8 terminal to make the
8	Y/L	Solenoid relay	solenoid relay function. Thus power is supplied to W
		1 '	terminal of stop solenoid and it pulls interior plunger. 1 second later, the interior contact (RY1) becomes "OFF"
		1 '	to cut power supply to solenoid relay. Then stop
		<u> </u> '	solenoid is switched to holding circuit.
9	R/W	CN1-12	Common
	T '		No electrical connection found.
10	W/G	Auto idle function indicator (US model only)	When auto idle switch is "ON", and power is supplied to CN2-2 terminal, interior contact (RY5) becomes
l I		(US model only)	"ON" to make auto idle function indicator go on.
11	R/W	CN1-12 (US model only)	Power supply for auto idle function lamp lighting.
		-	
12	R/W	Starter switch [ACC] terminal (Through 5A Fuse)	Power supply

### 4.1 Repairing Procedures

When performing failure diagnosis, pay special attention to the followings, observing general cautions.

### 4.1.1 Safety caution

- (1) Removing such cap and/or plug for receiver tank, fuel tanks and pipes where pressure is loaded, stop the machine and relieve all the interior pressure. Install measuring instruments connected firmly.
- (2) When doing the job with co-worker(s) together, make sure to give signal to the other person(s) and do not allow other persons to come near to the job site.
- (3) Take care not to touch hot portions and not to be involved in turning portions.

### 4.1.2 Caution during failure diagnosis

- (1) Do not make haste to disassemble the unit
  - If the unit is disassembled urgently.
  - ①You may disassemble the other portions which are not related with the trouble.
  - <sup>(2)</sup>The cause of trouble may be missing.

The unnecessary reparations require more spare parts and man-hours, and reparation costs will increase more. What is worse, you will lose reliance or trust from clients, operators and users. Therefore, it is absolutely necessary to investigate the trouble more carefully in advance and to follow the required procedures for failure diagnosis.

(2) Ask the clients about the trouble in details

In order to prevent misunderstanding and incorrect judgment about the trouble, it is necessary to ask users or operators about the following questions.

- ①Is there any other disorder than the trouble he has informed?
- ②Anything abnormal occurred before this trouble?
- ③Did this trouble happen unexpectedly? Or the unit had been operated in bad conditions before?
- (4) When and how did this trouble occur?
- 5 Had he repaired the unit before this trouble occurred?
- <sup>(6)</sup>Did he not experience similar trouble before?
- (3) Inspection items before starting diagnosis

Sometimes such trouble may be caused owing to routine mishandling of the unit. Before starting failure diagnosis, check the following items.

①The engine runs short of engine oil or its oil is not dirty?

() The engine runs short of engine on or its on is not dirt

<sup>(2)</sup>Check each wire connection for any disconnection.

③Check the other portions for any damage.

(4) Confirmation of trouble

Discuss with user(s) and/or operator(s) sufficiently about the trouble. As a result, judge whether their judgment is based on the numerical comparison or sentimental basis. Make him (them) understand well the reparation or correction you have finished.

- Then check and confirm by yourself the cause of the trouble.
- Note) Never proceed any investigation or measurement which may cause further greater damage.

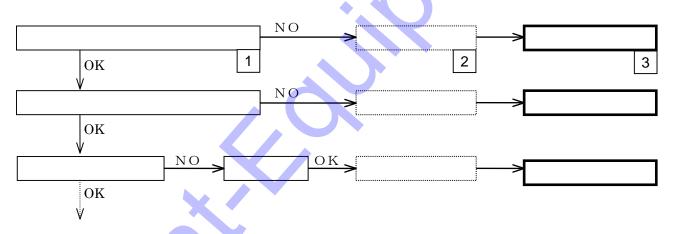

(5) Procedures of diagnosis

When you become well experienced, you can find out the cause easily during the process of confirmation (4). But easy understanding could cause unexpected failure. So check and judge it according to the following procedures.

- ①Check the easiest thing or portion first.
- ②Investigate the most possible cause.
- ③Check the other things connected to the trouble.
- (4) Check for the possibility of any other troubles.
- <sup>(5)</sup>Start proper and careful investigation on this trouble.
- (6) Prevention of repeated occurrence of similar trouble

Even if you have repaired the trouble, unless you get rid of the fundamental cause of the trouble, it will repeatedly occur. Therefore, perform full investigation of the trouble, and it is absolutely necessary to remove the basis of the trouble.

#### 4.1.3 How to use the failure diagnosis

①In the troubleshooting column something abnormal is mentioned in lined parenthesis.

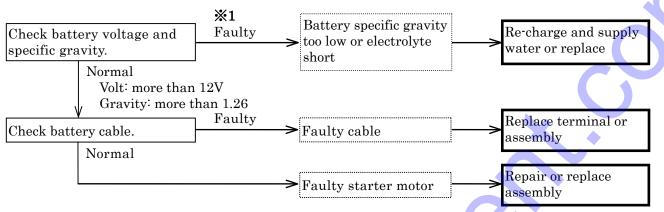

②In the troubleshooting column the cause of the said trouble is mentioned in dotted parenthesis.

③In the troubleshooting column the countermeasures or treatment are mentioned in the double lined parenthesis.

④1 under each column means the index of explanation. For details, see 4.5 "Explanation of trouble diagnosis"

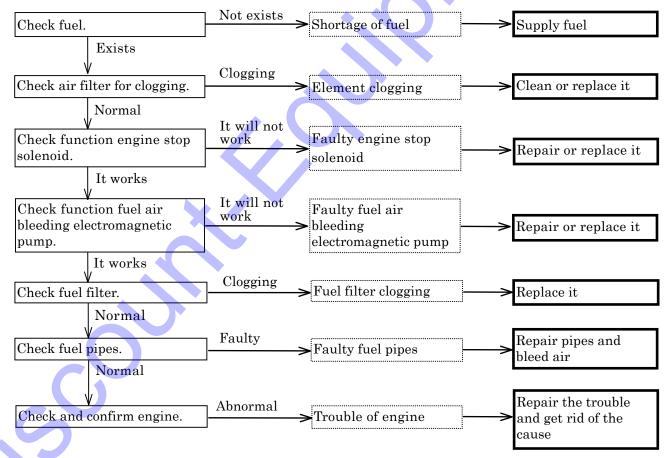

# 4.2 Failures of compressor and engine

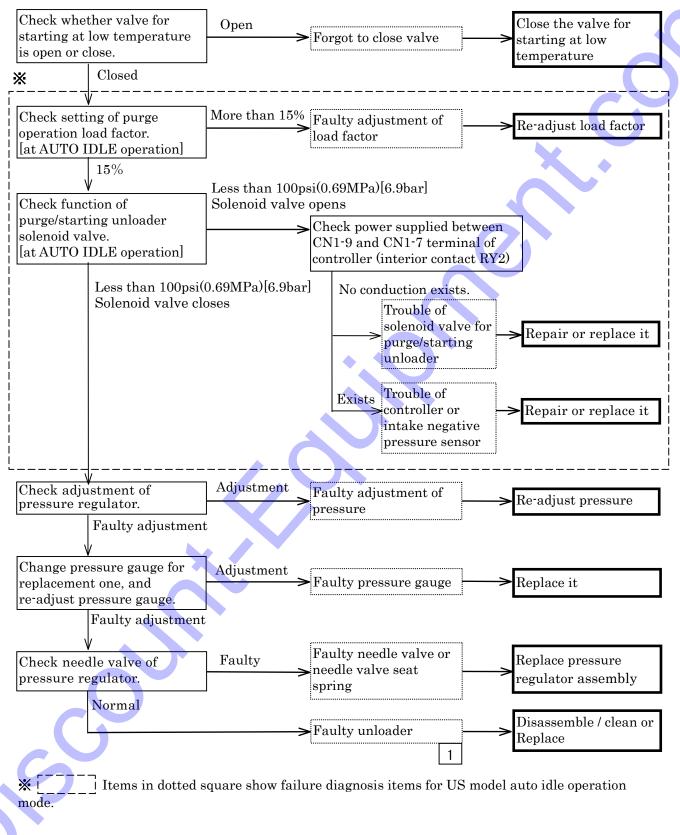

### 4.2.1 At start-up, starter rotates slowly

%1 : When starter switch is placed at the "START" position, the battery is not normal if B terminal voltage decreases by 10V.

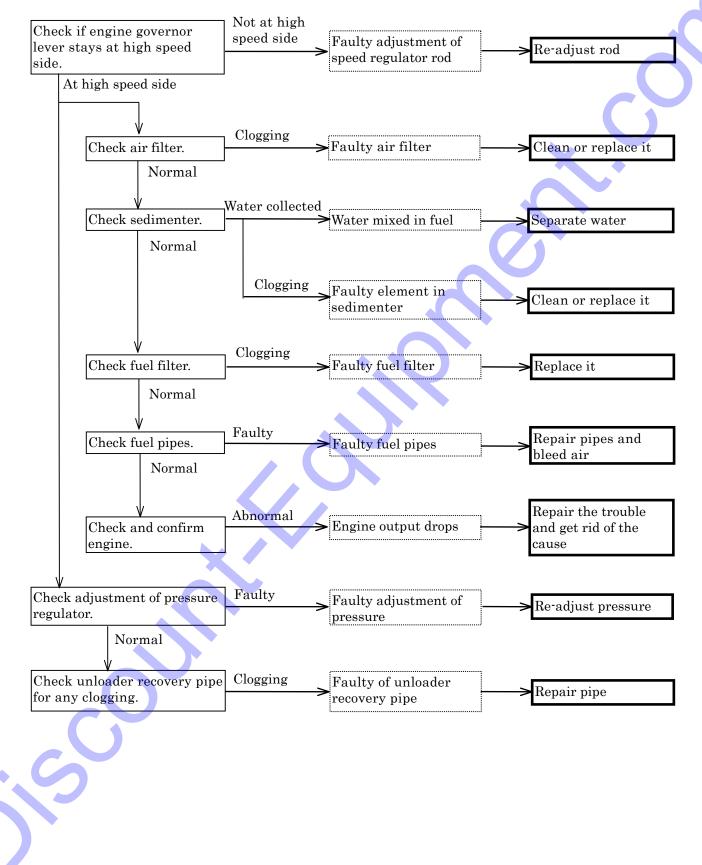

### 4.2.2 Starter turns, but engine will not start

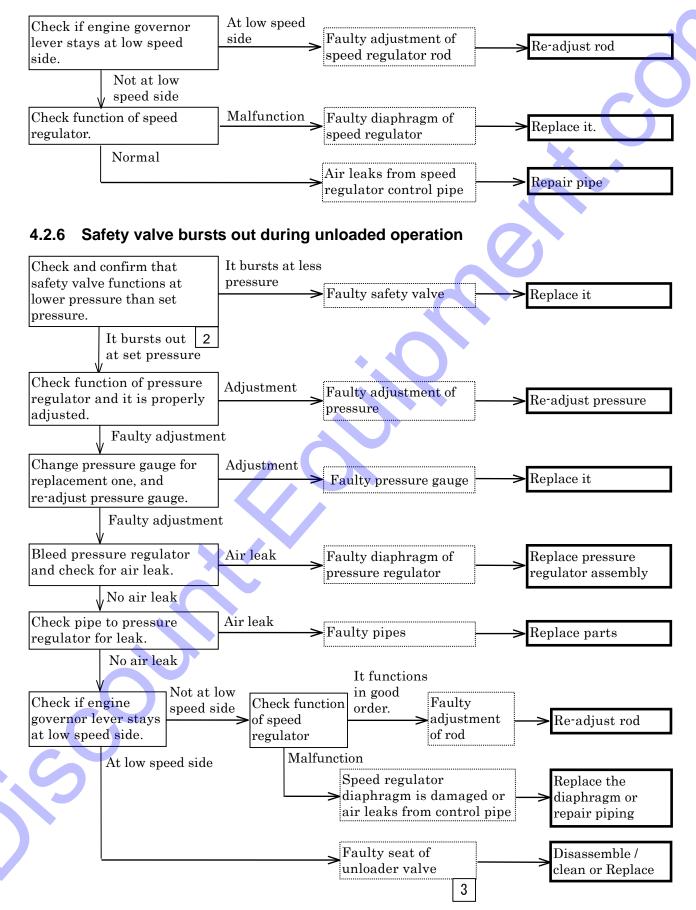

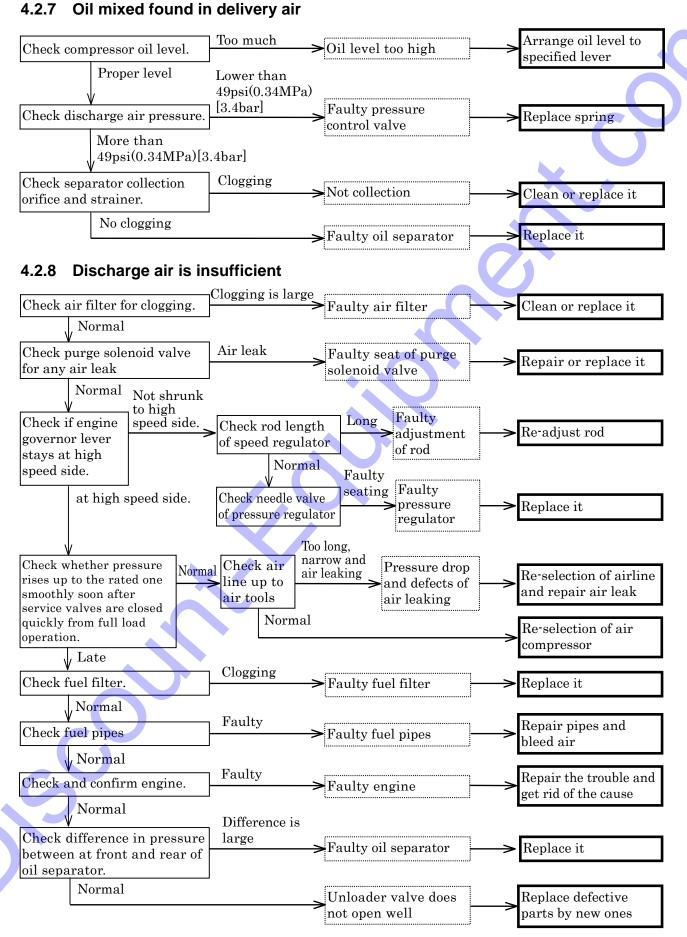

### 4.2.3 Engine revolutions will drop before pressure rises up to rated one

### 4.2.4 Engine will not turn to meet rated revolutions

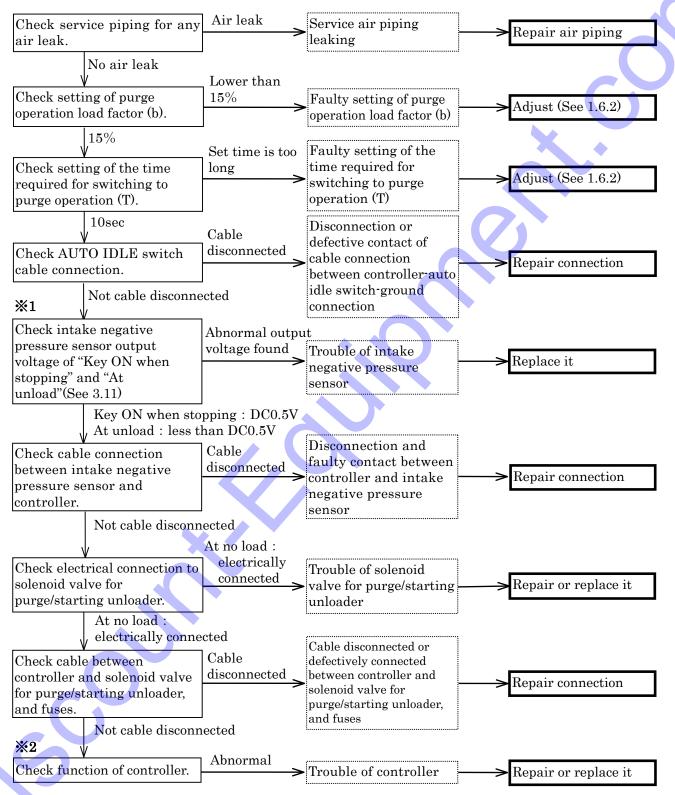

### 4.2.5 Minimum speed not available even upon no-load operation

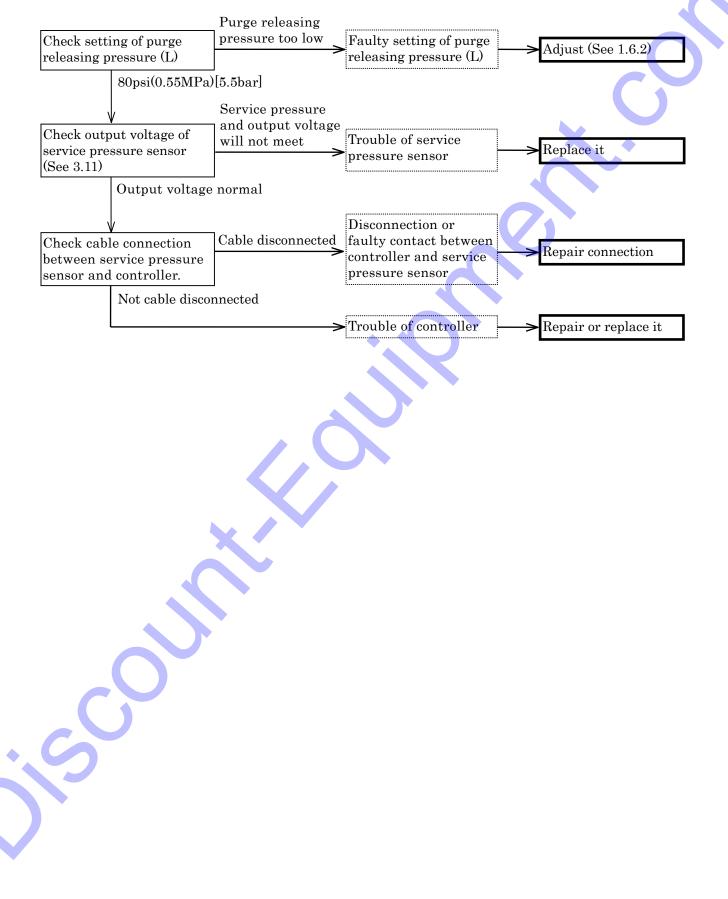

# 4.2.9 Purge control operation will not start even if AUTO IDLE (purge control) switch is pressed. (US model only)

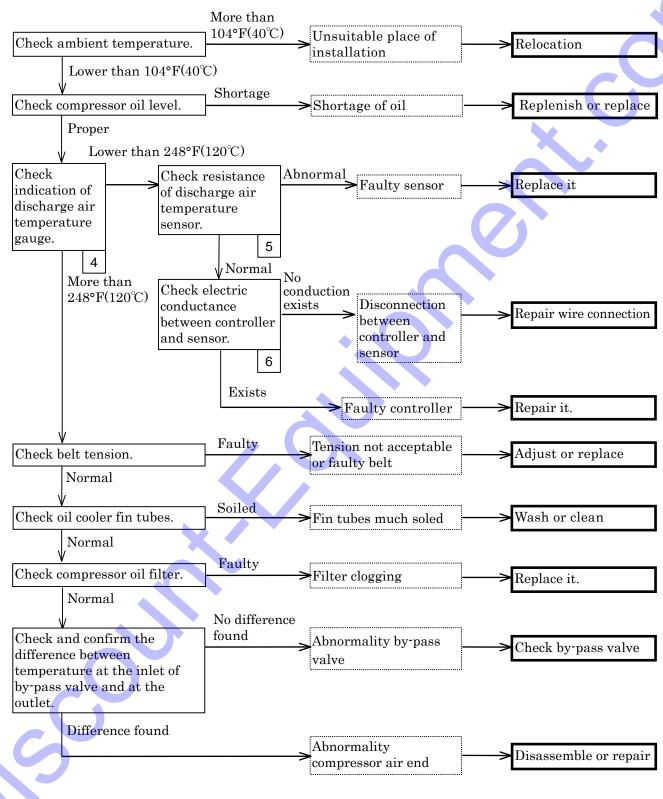

- **X1**: As the output voltage of intake negative pressure sensor at unload operation is very little, it is better to check the function of purge control operation after replacing the sensor with new one, if it is found difficult to diagnose the trouble.
- $\mathbf{X2}$ : For details of controller functions, see "No.3.1 Controller".

# 4.2.10 Even when the pressure at consumer's side drops, it will not recover from purge control operation. (US model only)

## 4.3 Operation of emergency switch

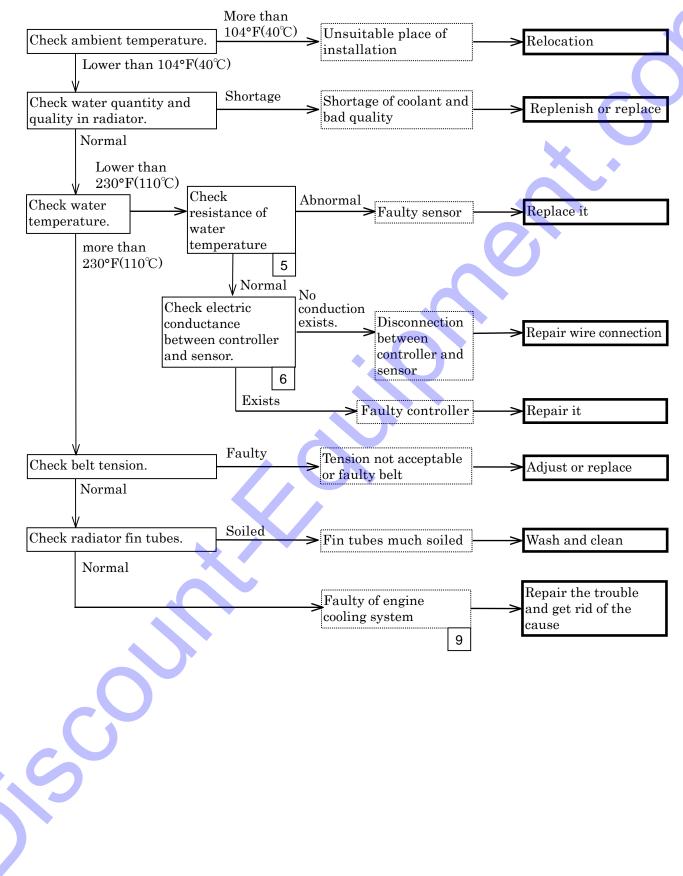

### 4.3.1 Discharge air temperature indication lamp glows and engine stops.

# Shortage Replenish or replace Check engine oil level. Shortage of oil Proper Faulty Check engine oil filter. Replace it Filter clogging Normal Check engine oil pressure Faulty Faulty oil pressure Replace it switch. switch 7 Normal Faulty Check engine Normal Check wire Faulty wire Repair wire connection connection to oil pressure. connection engine oil pressure switch. Abnormal 8 Faulty of engine Repair the trouble and get rid of the cause lubrication system . C

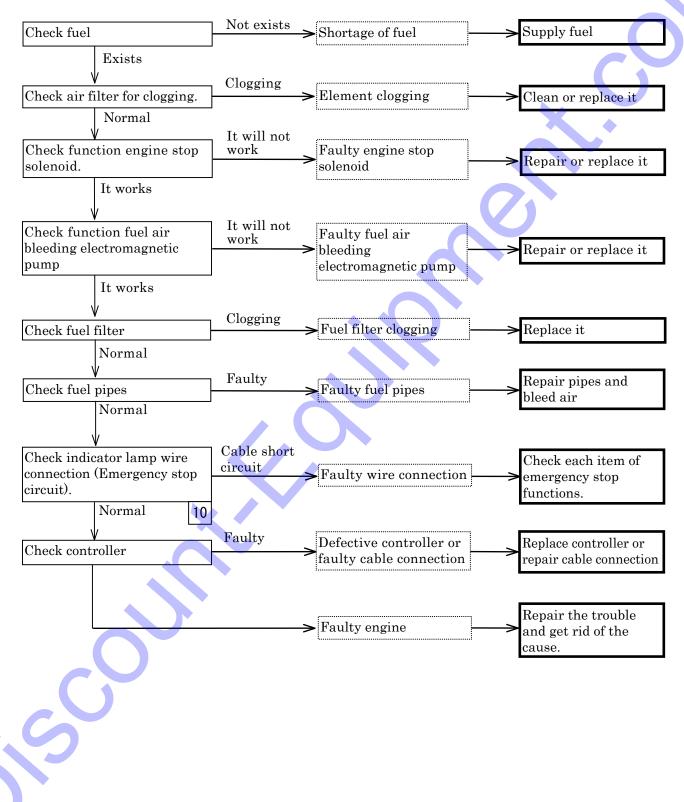

### 4.3.2 Engine oil pressure emergency indication lamp glows and engine stops

## 4.4 Others

### 4.4.1 Indicator lamps will not glow, but engine stops. (Starter switch is not set in contact, and blown fuse trouble is exempted.)

5

# 4.5 Explanation of trouble diagnosis

No.	Item	Cause	Remedy
1	Faulty unloader.	Unloader valve cannot be open.	Disassemble unloader valve to check function of valve and piston. Further check recovery pipe for any clogging.
2	Check and confirm that safety valve functions at lower pressure than set pressure for safety valve.	Check and locate pressure maladjustment or defective safety valve.	In case of malfunction of safety valve, safety valve assembly should be replaced.
3	Faulty seat of unloader valve	Faulty seat of unloader valve or faulty sliding function of valve and piston.	Disassemble unloader valve, and clean seat surface and check function of valve and piston.
4	Check discharge air temperature, using digital monitor.	Check whether actual rise of discharge air temperature stops engine or any failure of electrical circuit stops engine.	
5	Check the resistance of discharge air temperature/coolant temperature sensor.	For resistance characteristics of discharge air temperature and coolant temperature sensor, See 3.10.	Even disconnection of thermo sensor or its short-circuit causes engine to stop.
6	Check conductance between controller and discharge air temperature sensor/coolant temperature sensor.	Check whether there is any disconnection or short-circuit in cable connection between controller, discharge air temperature sensor and coolant temperature sensor. Clarify whether the trouble is caused by faulty cable connection or defective controller. When discharge air temperature/coolant temperature exceeds the set temperature $[248^{\circ}F(120^{\circ}C)/230^{\circ}F(110^{\circ}C)]$ , interior contact (RY3) between controller CN1-9 and CN1-3 terminals turns OFF to cut electrical connection to stop solenoid and making engine stop.	Connect variable resister $(1k \Omega)$ as shown in the following figure and gradually lower resistance value of variable resister. And when it displays abnormality, measure the value and check whether it is within the range of resistance of set temperature. (See No.5.Adjustment and inspection of No.3.1) $\begin{array}{c c c c c c c c c c c c c c c c c c c $

# 4. Troubleshooting

No	Item	Cause	Remedy
7	Check engine oil pressure switch.	For actuation pressure of oil pressure switch, See 1.2 "List of set values".	C
8	Check for any defective connection.	Check and make sure that no disconnection has been found for engine oil pressure switch. (Switching "ON" engine oil pressure switch enables engine emergency stop.)	
9	Faulty of engine cooling system.	When any trouble is not found in thermostat, coolant pump can be in disorder.	For the temperature at which thermostat valve opens, refer to 2.12.
10	Check indicator lamp wire connection.	It sometimes happens that emergency stop circuit is active, but warning lamp will not light on because its circuit is in trouble. Try to locate its cause.

Discount-Equipment.com is your online resource for commercial and industrial quality parts and equipment sales.

Locations:

Florida (West Palm Beach): 561-964-4949

Outside Florida TOLL FREE: 877-690-3101

Need parts? Check out our website at <u>www.discount-equipment.com</u>

#### Can't find what you need?

Click on this link: <u>http://www.discount-equipment.com/category/5443-parts/</u> and fill out the request form.

Please have the machine model and serial number available in order to help us get you the correct parts. One of our experienced staff members will get back to you with a quote for the right part that your machine needs.

We sell worldwide for the brands: Genie, Terex, JLG, MultiQuip, Mayco, Toro/Stone, Diamond Products, Magnum, Airman, Mustang, Power Blanket, Nifty Lift, Atlas Copco, Chicago Pneumatic, Allmand Brothers, Essick, Miller Spreader, Skyjack, Lull, Skytrak, Tsurumi, Husquvarna/Target, Whiteman-Concrete/Mortar, Stow-Concrete/Mortar, Baldor, Wacker, Sakai, Snorkel, Upright, Mi-T-M, Sullair, Neal, Basic, Dynapac, MBW, Weber, Bartell, Bennar Newman, Haulotte, Ditch Runner, Blaw-Knox, Himoinsa, Best, Buddy, Crown, Edco, Wyco, Bomag, Laymor, Terremite, Barreto, EZ Trench, Takeuchi, Basic, Bil-Jax, Curtis, Gehl, Heli, Honda, ICS/PowerGrit, Puckett, Waldon, ASV, IHI, Partner, Imer, Clipper, MMD, Koshin, Rice, Gorman Rupp, CH&E, Cat Pumps, Comet, General Pump, Giant, AMida, Coleman, NAC, Gradall, Square Shooter, Kent, Stanley, Tamco, Toku, Hatz, Kohler, Robin, Wisconsin, Northrock, Oztec, Toker TK, Rol-Air, Small Line, Wanco, Yanmar
