

SCRAPER FOR INCREASING YOUR PROFITS

The Terminator Infinity was designed not only to remove flooring materials with ease, but also to increase your profits. Whether you're a contractor, distributor, or rental house, the Infinity is the perfect fit.

It features an all-day battery that lasts 8-12 hours to make sure that you're able to work the entire day without needing to re-charge. For rental houses, this means a seamless rental, saving you time and money.

Other features include:

- No maintenance batteries
- Forklift channels for easy transport
- Dual On-board 120v charger (other power options available)
- Hour & Battery Life indicators

These are only a few of the features that make the Terminator Infinity the best All-Day Battery Ride-on Floor Scrape

ALL DAY BATTERY | 8-12 HOUR RUN TIME

The Terminator Infinity was designed to keep you working longer. With its 8-12 hour run time, you can be confident that this Ride-on Floor Scaper is going to get the job done. Many other Floor Scaper manufacturers can achieve this runtime but do so by sacrificing power and production.

Innovatech has configured the Terminator Infinity so that it has the ability to run all day without sacrificing production.

For rental houses, this runtime means that you will have issue-free rentals that keep customers coming back to you time and time again

DUAL ON-BOARD CHARGING | 30% FASTER CHARGE TIME

With many battery Ride-on Floor Scrapers, a separate charger is needed. While there are benefits to this, carting a charger around can be difficult and a pain for rental houses.

With the Terminator Infinity, we have integrated built-in charging ports right on the front of the machine to make this process simple. Using basic power (120v in North America), you can charge your floor scraper with basic extension chords from any outlet

NO MAINTENANCE BATTERIES

The Terminator Infinity comes standard with no maintenance batteries, also known as AGM batteries. This makes floor scraper maintenance much easier and less time consuming.

On other batteries, there is quite a lot of up-keep that has to happen in order to make sure the batteries stay in good condition. With these batteries, you will spend less time maintaining them, and more time removing flooring, in turn increasing your profits.
